- A. **Sources of Statistics:** Canada's external trade statistics are tabulated from copies of administrative documents collected by Revenue Canada, Customs at its ports across Canada. The Customs Act requires that each time goods are imported into or exported from Canada a document be filed with Customs giving such descriptions of the goods and details of the transaction as are required for the purposes of Customs administration. It follows that the method of compilation of external trade statistics is determined and limited to some extent by Customs regulations and procedures. Where these affect the precise or consistent application of the statistical principles explained in the following section, their impact is described in qualitative terms only.

Statistics on trade in electricity and on exports of crude petroleum and natural gas cannot, for administrative reasons, be obtained from Customs documents. They are instead collected by the Manufacturing and Primary Industries Division of Statistics Canada, with important statistical consequences explained in Note 4 below.

Import statistics for shipments from the United States of less than \$2,500 are estimated on the basis of a 10 per cent sample of such shipments. The size of this sample is at present in excess of 20,000 shipments per month.

Export statistics for shipments of less than \$2,500 from Quebec, Ontario, Manitoba and British Columbia to the United States are estimated on the basis of a 20 per cent sample. The size of this sample is at present in excess of 10,000 shipments per month.

- B. **Concepts and Definitions Used in the Compilation of External Trade Statistics:** The most comprehensive set of principles for the compilation of trade statistics is to be found in *International Trade Statistics: Concepts and Definitions*, published by the United Nations Statistical Office (Series M, No. 52; New York, 1970). The following notes are both a summary of these principles and a description of the choices and exceptions made in the case of Canada's external trade statistics.

1. **System of Trade:** Canadian statistics are tabulated according to the "general" system of trade. Thus *imports* include all goods which have crossed Canada's geographical boundary, whether they are entered through Customs for immediate consumption in Canada or stored in bonded Customs warehouses. *Domestic exports* include goods grown, extracted or manufactured in Canada (including goods of foreign origin which have been materially transformed in Canada). *Re-exports* are exports of goods of foreign origin which have not been materially transformed in Canada (including goods withdrawn for export from bonded Customs warehouses).

The trade statistics do not include exports to Canadian diplomatic or military posts abroad nor imports by foreign diplomatic or military posts in Canada because such posts are considered to be within the geographical boundary of the sponsor country. Purchases or sales of bunker supplies and stores for ships or aircraft engaged in international traffic, tourist purchases and settlers' effects are excluded for practical reasons. Goods which cross the Canadian border for convenience of transportation only are not included in trade statistics.

- A. **Sources des statistiques:** Les statistiques sur le commerce extérieur du Canada sont totalisées à partir des copies des documents administratifs recueillis par Revenu Canada (Douanes) dans ses bureaux de douane par tout le Canada. La Loi sur les douanes exige que chaque fois que des marchandises sont importées au Canada ou exportées du pays, une déclaration soit faite précisant la nature des marchandises et donnant le détail de l'opération commerciale d'après les besoins de la réglementation de l'administration douanière. Il s'ensuit que la méthode de production de statistiques sur le commerce extérieur est déterminée et limitée dans une certaine mesure par les règlements et les procédures des douanes. Lorsque ceux-ci nuisent à l'application précise ou uniforme des principes statistiques exposés dans la section suivante, leur incidence est décrite en termes qualitatifs seulement.

Des statistiques sur le commerce de l'énergie électrique et sur les exportations de pétrole brut et de gaz naturel ne peuvent, pour des raisons administratives, être tirées des documents de douane. Elles sont plutôt recueillies par la Division des industries manufacturières et primaires de Statistique Canada; les conséquences importantes sur le plan statistique sont expliquées à la note 4 ci-dessous.

Les chiffres d'importation portant sur les livraisons en provenance des États-Unis avec une valeur inférieure à \$2,500 sont préparés d'après un échantillon de 10 pour cent. Cet échantillon comprend actuellement plus de 20,000 envois par mois.

Les chiffres d'exportation portant sur les livraisons avec une valeur inférieure à \$2,500 en provenance du Québec, de l'Ontario, du Manitoba et de la Colombie Britannique vers les États-Unis sont préparés d'après un échantillon de 20 pour cent. Cet échantillon comprend actuellement plus de 10,000 envois par mois.

- B. **Concepts et définitions utilisés dans la production de statistiques sur le commerce extérieur:** L'ensemble le plus complet de principes directeurs pour la préparation de ces statistiques est présenté dans *Statistiques du commerce international: concepts et définitions*, publié par le Bureau de statistique des Nations Unies (série M, no 52, New York, 1970). Les notes suivantes résument ces principes et décrivent les choix et les exceptions dans le cas de la statistique du commerce extérieur du Canada.

1. **Système commercial:** Les statistiques canadiennes sont totalisées selon le système commercial "général". Ainsi, les *importations* comprennent tous les biens qui ont franchi les limites géographiques du Canada, qu'ils soient passés par les douanes pour être consommés immédiatement au Canada ou qu'ils aient été entreposés en douane. Les *exportations nationales* comprennent les biens cultivés, extraits ou fabriqués au Canada (y compris les biens d'origine étrangère qui ont été transformés au Canada). Les *réexportations* sont des exportations de biens d'origine étrangère qui n'ont pas été transformés matériellement au Canada (y compris les biens retirés des entrepôts de douane en vue de leur exportation).

La statistique du commerce ne prend pas en compte les exportations vers des missions diplomatiques ou militaires canadiennes à l'étranger ni les importations attribuables à des missions étrangères semblables au Canada, car on considère que ces missions ne se trouvent pas hors des limites géographiques du pays qui les a envoyées. Les achats ou les ventes d'approvisionnement de navires ou d'aéronefs affectés au transport international, les achats des touristes et les effets des migrants sont exclus pour des raisons pratiques. Les biens auxquels on fait franchir la frontière canadienne uniquement pour en faciliter le transport sont laissés hors compte.

2. **Coverage:** Merchandise trade includes only goods which add to or subtract from the stock of material resources in Canada as a result of their movement across the Canadian border. Consequently, goods intended to be returned to the exporting country after a short period of time are excluded from trade statistics (when this intention is apparent from the Customs documentation). Examples of such transactions are works of art loaned for exhibition, vehicles or horses exported to compete in races, and films exported for processing and return. Goods exported or imported for purposes of repair only are excluded from statistics, although payments or receipts for repairs are included in the trade statistics. Financial assets such as circulating coin, stocks and bonds are also excluded from the trade statistics.

3. **Valuation:** *Exports* are recorded at the values declared on export documents, which usually reflect the actual selling price or, in the case of non-arms-length transactions, the transfer price used for company accounting purposes. Most exports are valued at the place in Canada where they are laden aboard a carrier for export (e.g. mine, farm or factory) but a significant proportion of exports by water or air reflect values which include transportation charges to the port of export. Some overland shipments to the United States are recorded at a value which includes part or all of the transportation charges to the ultimate destination because such transportation charges cannot be identified and removed.

*Imports* are generally recorded at the values established for Customs duty purposes according to the provisions of the Customs Act. Customs values are identical to selling prices for most arms-length transactions. However, Customs values exceed company transfer prices for most transactions between affiliated firms. (Beginning in 1970, imports of automotive products from the United States have been recorded at company transfer prices rather than Customs values.) Import documents are required to show values which exclude all transportation charges. Some imports from the United States are however purchased on a "delivered" basis and their prices therefore reflect an allowance for transportation costs.

4. **Timing:** Statistics for a month include all shipments for which Customs documents were received at Statistics Canada between the first and last working days of the month and therefore do not represent trade in a calendar period. Individual shipments may not be recorded in statistics until some time after their arrival or departure because of administrative procedures which permit late filing of documents. Trade in electricity and exports of both crude petroleum and natural gas for a given month are included in statistics for the following month because they are collected too late for inclusion in statistics for the month indicated (see *Sources of Statistics*).

5. **Trading Partner Attribution:** *Imports* are attributed to the country from which the goods were first consigned directly to Canada, whether or not this is the country of origin. An exception is made in the case of goods of Central or South American origin consigned to Canada from the United States; such imports are credited to the country of origin.

*Exports* are attributed to the country which is the last known destination of the goods at the time of export. (Many primary products are shipped to entrepôt points, particularly in Europe, for re-export to the ultimate destination which is unknown when the goods leave Canada.) The country classification employed by the External Trade Division of Statistics Canada is designed for purposes of economic geography and therefore does not reflect the views or intentions of the Government of Canada on international issues of recognition, sovereignty or jurisdiction.

2. **Champ d'observation:** Le commerce de marchandises ne comprend que les biens dont le passage d'un côté à l'autre de la frontière canadienne augmente ou diminue le stock de ressources matérielles du Canada. Ainsi, les biens qui seront renvoyés dans le pays exportateur après un court laps de temps sont exclus de la statistique du commerce (lorsque cette intention se dégage des documents de douane). Citons à titre d'exemple les oeuvres d'art prêtées pour une exposition, les véhicules ou les chevaux exportés en vue d'une course, les films exportés pour être développés, puis retournés. Les biens exportés ou importés pour fins de réparation seulement ne sont pas pris en compte, bien que les paiements ou les recettes au titre des réparations soient portés dans la statistique du commerce. Des avoirs financiers comme le numéraire non périmé, les actions et les obligations sont également laissés hors compte.

3. **Evaluation:** Les *exportations* sont présentées selon les valeurs déclarées dans les documents d'exportation; il s'agit habituellement du prix de vente réel ou, dans le cas des opérations entre entreprises affiliées, du prix de transfert adopté par les sociétés à des fins comptables. La plupart des exportations sont évaluées au point du territoire du Canada (mine, ferme ou usine) où elles sont chargées et ainsi confiées à un transporteur en vue de leur exportation, mais une partie importante des exportations par eau ou par air se voit attribuer une valeur qui comprend les frais de transport vers le port d'exportation. Pour certaines livraisons par voie de terre vers les États-Unis, la valeur indiquée comprend en partie ou en totalité les frais de transport jusqu'à la destination ultime parce qu'on ne peut isoler et retrancher ces frais.

Les *importations* sont habituellement présentées selon les valeurs établies aux fins du prélèvement des droits de douane conformément aux dispositions de la Loi sur les douanes. Les valeurs des douanes sont identiques aux prix de vente dans le cas de la plupart des opérations entre parties indépendantes. Toutefois, les valeurs douanières dépassent les prix de transfert des sociétés dans le cas de la majorité des opérations entre entreprises affiliées. (À partir de 1970, les importations de produits de l'industrie automobile en provenance des États-Unis sont indiquées aux prix de transfert et non pas selon les valeurs fixées en douane.) Les valeurs déclarées dans les documents d'importation ne doivent pas comprendre les frais de transport. Certaines importations en provenance des États-Unis sont toutefois sur une base de livraison et leur prix englobe par conséquent les frais de transport.

4. **Période:** Les statistiques d'un mois donné visent toutes les livraisons pour lesquelles Statistique Canada a reçu des documents de douane entre le premier et le dernier jour ouvrable du mois; elles ne présentent donc pas le commerce pour une division normalisée de l'année civile. De diverses livraisons peuvent ne pas être prises en compte dès leur arrivée ou leur départ à cause de la procédure administrative qui donne lieu à une présentation tardive des documents. Le commerce d'énergie électrique et les exportations de pétrole brut et de gaz naturel d'un mois donné sont présentés dans les statistiques du mois suivant parce qu'on obtient les données trop tard pour qu'elles puissent faire partie des statistiques du mois de référence (voir *Sources des statistiques*).

5. **Partenaires commerciaux et attribution:** Les *importations* sont attribuées au pays de première consignation directe des biens au Canada, que ce soit ou non le pays d'origine. On déroge à cette règle dans le cas des biens ayant comme région d'origine l'Amérique centrale ou l'Amérique du Sud et expédiés au Canada depuis les États-Unis; ces importations sont portées au crédit du pays d'origine.

Les *exportations* sont attribuées au pays de dernière destination connue au moment de l'exportation. (De nombreux produits "primaires" sont expédiés vers des points d'entreposage, notamment en Europe, en vue de leur réexportation; la destination ultime de ces produits est inconnue lorsqu'ils quittent le Canada.) La classification des pays utilisée par la Division du commerce extérieur de Statistique Canada a été conçue aux fins de la géographie économique et ne reflète donc pas l'opinion du Gouvernement du Canada relativement aux questions de reconnaissance, de souveraineté ou de compétence en matière internationale.

6. **Revisions of Statistics:** The statistics in this report for the current month are preliminary and subject to revision at any time until the January report for the following year has been published. Statistics for previous years are subject to revision in the March issue. Statistical series are adjusted for seasonal variation using Census Method II (X-11 variant); these adjustments are also revised in March of each year.

7. **Indexes of Price and Volume:** With the publication of indexes for April 1975, the weighting system used for the trade price and volume indexes has been changed to correspond with the system used to estimate Gross National Product (G.N.P.) at constant prices. The reference period for the indexes is also being changed from 1968 = 100 to 1971 = 100. The purpose of these changes is to reduce discrepancies between the trade and G.N.P. indexes caused by differences in weighting systems and to align the time references of the various index numbers published by Statistics Canada (see Canadian Statistical Review, May, 1975, p.116).

Before April 1975, the import and export price indexes were calculated using a (Laspeyres) system of fixed weights based on the 1968 pattern of trade. The volume index was derived by dividing (deflating) the value index by the corresponding fixed-weighted price index. This yielded a current-weighted (Paasche) volume index.

In the new indexes, the use of fixed weights for the price indexes and current weights for the volume indexes is reversed. The new price indexes in tables 3, 4, 5, and 6 are current-weighted. The weights are trade quantities for the month, quarter or year to which the index refers and hence change from period to period. The new volume index is derived by dividing the value index by the corresponding current-weighted price index. The resulting volume index is, therefore, weighted with fixed 1971 price weights, as are the measures of G.N.P. components in constant 1971 prices.

The new 1971 trade indexes are based on an expanded set of price indicators selected to represent 1971 trading patterns. Individual price indicators are either commodity unit values calculated directly from the trade statistics or, particularly in the case of end products, price indexes obtained from other Canadian or foreign statistics.

Historical data for the new indexes in tables 3, 4, 5, and 6 from 1971 to 1973 were published as an appendix in the July, August and September 1975 Summaries of External Trade. An explanation of the methodology used to construct the new indexes and an analysis of the impact of the changes will be published in the near future.

8. **Provincial Detail:** Export statistics by province of lading indicate the province in which the goods were first laden aboard a carrier for export, which may not in all cases represent the province in which the goods were grown, extracted or manufactured. Import statistics by province of clearance indicate the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse; this may not always coincide with the province in which the goods are consumed or enter the productive process.

6. **Révision des statistiques:** Les statistiques publiées pour le mois d'observation sont provisoires et susceptibles d'être révisées ou rectifiées en tout temps jusqu'à la parution du bulletin de janvier de l'année suivante. Les statistiques portant sur les années précédentes peuvent être rectifiées dans la publication de mars. Les séries statistiques sont désaisonnalisées selon la *Census Method II* (version X-11); ces ajustements font également l'objet d'une révision chaque année en mars.

7. **Indices des prix et du volume:** À partir de la publication des indices pour le mois d'avril, 1975, le système de pondération employé dans le calcul des indices des prix et du volume du commerce a été aligné avec la pondération des indices employés dans la préparation des chiffres du Produit National Brut (P.N.B.) aux prix constants. La période de référence des indices a été également changée, 1971 = 100 remplaçant 1968 = 100. Ces changements ont visé l'élimination des différences entre les indices du commerce et ceux du P.N.B., différences dont la source était l'incompatibilité des systèmes de pondération. Ils ont également visé l'alignement des périodes de référence de l'ensemble des indices publiés par Statistique Canada. (voir Revue Statistique du Canada, Mai, 1975, p.116).

Avant avril, 1975, les indices des prix à l'importation et à l'exportation se basaient sur un système de pondération fixe du type Laspeyres, d'après la structure du commerce en 1968. Les indices du volume s'obtenaient en divisant (déflétant) l'indice de la valeur par l'indice du prix correspondant. Les indices du volume étaient, en conséquence, des indices du type Paasche, à pondération mobile.

Les nouveaux indices entraînent un renversement des systèmes de pondération. Les indices des prix compris dans les tableaux 3, 4, 5, et 6 sont pondérés d'après les quantités mensuelles, trimestrielles ou annuelles du commerce correspondantes à la période de l'indice. Par conséquence ces pondérations sont variables d'une période à l'autre. Sous le nouveau système, les indices du volume sont encore calculés en divisant l'indice de la valeur par l'indice du prix correspondant. L'indice du volume obtenu est donc implicitement pondéré par les prix fixes de l'année 1971, et correspond aux chiffres du P.N.B. aux prix constants de 1971.

Les nouveaux indices du commerce ont été calculés d'après un échantillon d'indices élémentaires élargi. Ces indices élémentaires proviennent généralement des valeurs unitaires de marchandises sorties des statistiques du commerce. Toutefois, surtout dans le cas des produits finis, des indices de prix canadiens obtenus à partir de sources canadiennes ou étrangères sont également utilisés.

Les données rétrospectives pour les années de 1971 à 1973 portant sur les tableaux 3, 4, 5, et 6 ont été publiées en annexe dans les Sommaires du Commerce extérieur de juillet, août et septembre 1975. Des renseignements concernant la méthodologie employée dans le calcul des nouveaux indices ainsi qu'une analyse des effets du changement de procédure seront publiés dans un proche avenir.

8. **Statistiques provinciales:** Les statistiques des exportations par province de chargement indiquent la province où les biens ont d'abord été confiés à un transporteur en vue de leur exportation; il ne s'agit donc pas toujours de la province où les biens ont été cultivés, extraits ou fabriqués. Les statistiques des importations par province de dédouanement présentent la province où les biens ont passé la douane en vue d'une consommation immédiate ou de leur entreposage en douane; cette province peut différer de la province de consommation ou d'entrée dans l'activité productive.

9. **Principal trading areas:** Effective January, 1976, the "principal trading areas" shown in some tables include new groupings which are defined below:

**Other E.E.C.:** Belgium, Denmark, France, Germany (F.R.), Ireland, Italy, Luxembourg, Netherlands (the U.K. is also a member of the E.E.C. but is shown separately because of the importance of its trade with Canada).

**Other O.E.C.D.:** Austria, Finland, Greece, Iceland, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, Australia, New Zealand. (The E.E.C. countries, United States, Japan and Canada are also members of O.E.C.D. — The Organization for Economic Cooperation and Development).

**Other America:** This group includes all countries and territories of North and South America (other than the United States and Canada) including Greenland, Bermuda and Puerto Rico.

10. **Sources of Further Information:** More detailed monthly, quarterly and annual trade statistics are published in the 65-xxx series of Statistics Canada publications. Detailed descriptions and indexes of the commodity classifications are also available. See the Statistics Canada publications catalogue for descriptions of the contents of the various publications. As a result of continuous research on trade statistics, additional reference materials are published from time to time. For example, *The Reconciliation of U.S.-Canada Trade Statistics*, published by the United States - Canada Trade Statistics Committee, is available on request from the address given below.

Questions concerning details of methods not covered by these notes should be addressed in writing to the Director, External Trade Division, Statistics Canada, Ottawa, Ontario K1A 0V5.

9. **Marchés principaux:** A partir de janvier 1976, les "marchés principaux" apparaissant dans certains tableaux comprennent les nouveaux groupements définis ci-dessous:

**Autres C.E.E.:** Allemagne (R.F.), Belgique, Danemark, France, Irlande, Italie, Luxembourg, Pays-Bas (le Royaume-Uni est aussi membre de la C.E.E. mais il est séparé dans les statistiques à cause de son importance dans le commerce du Canada).

**Autres O.C.D.E.:** Autriche, Espagne, Finlande, Grèce, Islande, Norvège, Portugal, Suède, Suisse, Turquie, Australie, Nouvelle-Zélande. (Les pays membres de la C.E.E., les États-Unis, le Japon et le Canada sont aussi membres de l'O.C.D.E. — l'Organisation pour la coopération et le développement économique.)

**Autres Amérique:** Cette catégorie comprend tous les pays et les territoires de l'Amérique du nord et du sud (sauf les États-Unis et le Canada), y compris le Groënland, les Bermudes et Porto Rico.

10. **Sources de renseignements supplémentaires:** Des statistiques mensuelles, trimestrielles et annuelles plus détaillées sur le commerce paraissent dans la série 65-xxx des publications de Statistique Canada. On peut également se procurer des descriptions détaillées et des index des classifications de marchandises. Veuillez consulter le catalogue des publications de Statistique Canada pour une description du contenu des diverses publications. La recherche continue dans le domaine de la statistique du commerce donne naissance de temps à autre à de nouveaux documents de référence. Ainsi, on peut obtenir à l'adresse mentionnée ci-dessous un document sur le rapprochement des statistiques du commerce États-Unis-Canada publié par le comité de la statistique du commerce États-Unis-Canada.

Toute question au sujet des méthodes employées doit être adressée par écrit au directeur de la Division du commerce extérieur, Statistique Canada, Ottawa, Ontario K1A 0V5.

## SELECTED COMMODITY GROUPINGS (TABLE 3): M.C.C. CONTENTS

## GROUPES DE MARCHANDISES CHOISIS (TABLEAU 3): COMPOSITION EN TERMES DE LA C.M.I.

|  |   |   |
|--|---|---|
| Meat, fresh, chilled or frozen             | 01101 - 01199                                 | Viande fraîche, réfrigérée ou congelée  |
| Fresh fruits                               | 07103 - 07189                                 | Fruits frais                            |
| Fresh vegetables                           | 09103 - 09199                                 | Légumes frais                           |
| Raw sugar                                  | 10119   | Sucre brut                              |
| Cocoa, chocolate, coffee and tea           | 11110 - 11349                                 | Cacao, chocolat, café et thé            |
| Wool, cotton and man-made fibres           | 24209 - 24299 & 24410 - 24499 & 24617 - 24699 | Laine, coton et fibres artificielles    |
| Coal                                       | 26110 - 26189                                 | Charbon                                 |
| Crude petroleum                            | 26410   | Pétrole brut                            |
| Textile fabricated materials               | 36021 - 38999                                 | Ouvrages en matières textiles           |
| Chemicals and related products             | 40003 - 42999                                 | Produits chimiques et produits connexes |
| Petroleum and coal products                | 43109 - 43997                                 | Dérivés du pétrole et du charbon        |
| Rolling mill products                      | 44403 - 44690                                 | Produits des usines de laminage         |
| Non ferrous metals                         | 45105 - 45999                                 | Métaux non-ferreux                      |
| Metal fabricated basic products            | 46113 - 46999                                 | Ouvrages de base en laminage            |
| Industrial machinery                       | 50119 - 52999                                 | Machinerie industrielle                 |
| Agricultural machinery, including tractors | 54109 - 55199                                 | Machinerie agricole y compris tracteurs |
| Passenger automobiles and chassis          | 58104 - 58149                                 | Voitures particulières et châssis       |
| Trucks and other motor vehicles            | 58304 - 58799                                 | Camions et autres véhicules moteurs     |
| Motor vehicle engines and parts            | 58802 - 58849                                 | Moteurs de véhicules auto et pièces     |
| Motor vehicle parts, except engines        | 58909 - 58999                                 | Pièces de véhicules auto sauf moteurs   |
| Communication and related equipment        | 63419 - 63999                                 | Équipement et matériel de communication |
| Office machines and equipment              | 77104 - 77199                                 | Machines et matériel de bureau          |
| Apparel and apparel accessories            | 78119 - 78999                                 | Vêtements et accessoires de vêtement    |

## SELECTED COMMODITY GROUPINGS (TABLE 4): X.C.C. CONTENTS.

## GROUPES DE MARCHANDISES CHOISIS (TABLEAU 4): COMPOSITION EN TERMES DE LA C.M.E.

|  |                       |  |
|--|-----------------------|--|
| Meat, fresh, chilled or frozen             | 01101 - 01199         | Viande fraîche, réfrigérée ou congelée       |
| Fish and fish preparations                 | 03106 - 04699         | Poissons et préparations de poissons         |
| Barley                                     | 06119                 | Orge   |
| Wheat                                      | 06161 - 06169         | Blé  |
| Rapeseed                                   | 21240                 | Graine de colza                              |
| Iron ores and concentrates                 | 25104 - 25116         | Minerais et concentrés de fer                |
| Copper in ores, concentrates and scrap     | 25310 - 25390         | Minerais, concentrés et déchets de cuivre    |
| Nickel in ores, concentrates and scrap     | 25520 - 25540         | Minerais, concentrés et déchets de nickel    |
| Crude petroleum                            | 26410                 | Pétrole brut                                 |
| Natural gas                                | 26431                 | Gaz naturel                                  |
| Coal and other crude bituminous substances | 26169 - 26189 & 26499 | Charbon et autres subst. bitumineuses brutes |
| Asbestos, unmanufactured                   | 27110 - 27140         | Amiante, non ouvré                           |
| Lumber                                     | 33106 - 33159         | Bois d'oeuvre                                |
| Wood pulp and similar pulp                 | 34019 - 34099         | Pâte de bois et pâtes similaires             |
| Newsprint paper                            | 35109                 | Papier journal                               |
| Fertilizers and fertilizer materials       | 41606 - 41699         | Engrais et matières fertilisantes            |
| Rolling mill products                      | 44430 - 44599         | Produits des usines de laminage              |
| Aluminum, including alloys                 | 45109 - 45149         | Aluminium, y compris alliages                |
| Copper and alloys                          | 45204 - 45299         | Cuivre et alliages                           |
| Nickel and alloys                          | 45415 - 45499         | Nickel et alliages                           |
| Industrial machinery                       | 50149 - 52998         | Machinerie industrielle                      |
| Agricultural machinery, including tractors | 54109 - 55199         | Machinerie agricole y compris tracteurs      |

## TABLE OF CONTENTS

|   |  |
|---|--|
| <b>Explanatory Notes</b> .....  |  |
| Selected Commodity Groupings (Tables 3 and 4):<br>M.C.C. and X.C.C. Contents..... |  |
| <b>I Analytical Charts and Tables</b> .....                                       |  |
| Charts  |  |
| I Imports, Exports, and Trade Balance .....                                       |  |
| II Volume and Price Indexes .....   |  |
| III Current Values and Price Indexes by<br>Section .....                          |  |
| IV Imports and Exports by Principal Trading<br>Areas .....                        |  |
| V Major Commodity Aggregates .....  |  |
| Tables  |  |
| 1. Imports from Principal Trading Areas.....                                      |  |
| 2. Exports to Principal Trading Areas.....  |  |
| 3. Imports of Selected Commodity Groupings.....                                   |  |
| 4. Domestic Exports of Selected Commodity<br>Groupings.....                       |  |
| 5. Price and Volume Indexes of Imports.....                                       |  |
| 6. Price and Volume Indexes of Domestic<br>Exports.....                           |  |
| <b>II Imports</b> .....   |  |
| Tables  |  |
| M-1. Imports from Principal Trading Areas.....                                    |  |
| M-2. Imports by Country.....  |  |
| M-3. Imports by Commodity Category.....   |  |
| M-4. Imports by Province of Clearance .....                                       |  |
| <b>III Exports</b> .....  |  |
| Tables  |  |
| X-1. Exports to Principal Trading Areas.....                                      |  |
| X-2. Domestic Exports by Country .....  |  |
| X-3. Domestic Exports by Commodity Category.....                                  |  |
| X-4. Exports by Province of Lading.....   |  |

## TABLE DES MATIERES

|  |      |
|--|------|
|  | Page |
| <b>Notes Explicatives</b> .....  | 39   |
| Groupes de marchandises choisis (Tableaux 3 et 4):<br>composition en termes de la C.M.I. et C.M.E..... | 43   |
| <b>I Graphiques et tableaux analytiques</b> .....  | 3    |
| Graphiques   |      |
| I Importations, Exportations et balance commerciale.....   | 4    |
| II Indices du volume et des prix .....   | 4    |
| III Valeurs courantes et indices des prix par<br>section .....   | 5    |
| IV Importations et exportations par marchés<br>principaux .....  | 6    |
| V Principaux groupements de marchandises .....   | 6    |
| Tableaux   |      |
| 1. Importations en provenance des marchés principaux.....  | 7    |
| 2. Exportations vers les marchés principaux .....  | 7    |
| 3. Importations, groupes de marchandises choisis.....  | 8    |
| 4. Exportations nationales, groupes de marchandises<br>choisis.....                                    | 9    |
| 5. Indices des prix et du volume des importations.....   | 10   |
| 6. Indices des prix et du volume des exportations<br>nationales.....                                   | 11   |
| <b>II Importations</b> .....   | 13   |
| Tableaux   |      |
| M-1. Importations en provenance des marchés<br>principaux .....  | 14   |
| M-2. Importations par pays.....  | 15   |
| M-3. Importations par catégorie de marchandises.....   | 18   |
| M-4. Importations par province de dédouanement .....   | 26   |
| <b>III Exportations</b> .....  | 27   |
| Tableaux   |      |
| X-1. Exportations vers les marchés principaux .....  | 28   |
| X-2. Exportations nationales par pays.....   | 29   |
| X-3. Exportations nationales par catégorie de<br>marchandises .....                                    | 32   |
| X-4. Exportations par province de chargement .....   | 38   |

\* Includes Yukon - Y compris le Yukon

- A. **Sources of Statistics:** Canada's external trade statistics are tabulated from copies of administrative documents collected by Revenue Canada, Customs at its ports across Canada. The Customs Act requires that each time goods are imported into or exported from Canada a document be filed with Customs giving such descriptions of the goods and details of the transaction as are required for the purposes of Customs administration. It follows that the method of compilation of external trade statistics is determined and limited to some extent by Customs regulations and procedures. Where these affect the precise or consistent application of the statistical principles explained in the following section, their impact is described in qualitative terms only.

Statistics on trade in electricity and on exports of crude petroleum and natural gas cannot, for administrative reasons, be obtained from Customs documents. They are instead collected by the Manufacturing and Primary Industries Division of Statistics Canada, with important statistical consequences explained in Note 4 below.

Import statistics for shipments from the United States of less than \$2,500 are estimated on the basis of a 10 per cent sample of such shipments. The size of this sample is at present in excess of 20,000 shipments per month.

Export statistics for shipments of less than \$2,500 from Quebec, Ontario, Manitoba and British Columbia to the United States are estimated on the basis of a 20 per cent sample. The size of this sample is at present in excess of 10,000 shipments per month.

- B. **Concepts and Definitions Used in the Compilation of External Trade Statistics:** The most comprehensive set of principles for the compilation of trade statistics is to be found in *International Trade Statistics: Concepts and Definitions*, published by the United Nations Statistical Office (Series M, No. 52; New York, 1970). The following notes are both a summary of these principles and a description of the choices and exceptions made in the case of Canada's external trade statistics.

- I. **System of Trade:** Canadian statistics are tabulated according to the "general" system of trade. Thus *imports* include all goods which have crossed Canada's geographical boundary, whether they are entered through Customs for immediate consumption in Canada or stored in bonded Customs warehouses. *Domestic exports* include goods grown, extracted or manufactured in Canada (including goods of foreign origin which have been materially transformed in Canada). *Re-exports* are exports of goods of foreign origin which have not been materially transformed in Canada (including goods withdrawn for export from bonded Customs warehouses).

The trade statistics do not include exports to Canadian diplomatic or military posts abroad nor imports by foreign diplomatic or military posts in Canada because such posts are considered to be within the geographical boundary of the sponsor country. Purchases or sales of bunker supplies and stores for ships or aircraft engaged in international traffic, tourist purchases and settlers' effects are excluded for practical reasons. Goods which cross the Canadian border for convenience of transportation only are not included in trade statistics.

- A. **Sources des statistiques:** Les statistiques sur le commerce extérieur du Canada sont totalisées à partir des copies des documents administratifs recueillis par Revenu Canada (Douanes) dans ses bureaux de douane par tout le Canada. La Loi sur les douanes exige que chaque fois que des marchandises sont importées au Canada ou exportées du pays, une déclaration soit faite précisant la nature des marchandises et donnant le détail de l'opération commerciale d'après les besoins de la réglementation de l'administration douanière. Il s'ensuit que la méthode de production de statistiques sur le commerce extérieur est déterminée et limitée dans une certaine mesure par les règlements et les procédures des douanes. Lorsque ceux-ci nuisent à l'application précise ou uniforme des principes statistiques exposés dans la section suivante, leur incidence est décrite en termes qualitatifs seulement.

Des statistiques sur le commerce de l'énergie électrique et sur les exportations de pétrole brut et de gaz naturel ne peuvent, pour des raisons administratives, être tirées des documents de douane. Elles sont plutôt recueillies par la Division des industries manufacturières et primaires de Statistique Canada; les conséquences importantes sur le plan statistique sont expliquées à la note 4 ci-dessous.

Les chiffres d'importation portant sur les livraisons en provenance des États-Unis avec une valeur inférieure à \$2,500 sont préparés d'après un échantillon de 10 pour cent. Cet échantillon comprend actuellement plus de 20,000 envois par mois.

Les chiffres d'exportation portant sur les livraisons avec une valeur inférieure à \$2,500 en provenance du Québec, de l'Ontario, du Manitoba et de la Colombie Britannique vers les États-Unis sont préparés d'après un échantillon de 20 pour cent. Cet échantillon comprend actuellement plus de 10,000 envois par mois.

- B. **Concepts et définitions utilisés dans la production de statistiques sur le commerce extérieur:** L'ensemble le plus complet de principes directeurs pour la préparation de ces statistiques est présenté dans *Statistiques du commerce international: concepts et définitions*, publié par le Bureau de statistique des Nations Unies (série M, no 52, New York, 1970). Les notes suivantes résument ces principes et décrivent les choix et les exceptions dans le cas de la statistique du commerce extérieur du Canada.

- I. **Système commercial:** Les statistiques canadiennes sont totalisées selon le système commercial "général". Ainsi, les *importations* comprennent tous les biens qui ont franchi les limites géographiques du Canada, qu'ils soient passés par les douanes pour être consommés immédiatement au Canada ou qu'ils aient été entreposés en douane. Les *exportations nationales* comprennent les biens cultivés, extraits ou fabriqués au Canada (y compris les biens d'origine étrangère qui ont été transformés au Canada). Les *réexportations* sont des exportations de biens d'origine étrangère qui n'ont pas été transformés matériellement au Canada (y compris les biens retirés des entrepôts de douane en vue de leur exportation).

La statistique du commerce ne prend pas en compte les exportations vers des missions diplomatiques ou militaires canadiennes à l'étranger ni les importations attribuables à des missions étrangères semblables au Canada, car on considère que ces missions ne se trouvent pas hors des limites géographiques du pays qui les a envoyées. Les achats ou les ventes d'approvisionnement de navires ou d'aéronefs affectés au transport international, les achats des touristes et les effets des migrants sont exclus pour des raisons pratiques. Les biens auxquels on fait franchir la frontière canadienne uniquement pour en faciliter le transport sont laissés hors compte.

2. **Coverage:** Merchandise trade includes only goods which add to or subtract from the stock of material resources in Canada as a result of their movement across the Canadian border. Consequently, goods intended to be returned to the exporting country after a short period of time are excluded from trade statistics (when this intention is apparent from the Customs documentation). Examples of such transactions are works of art loaned for exhibition, vehicles or horses exported to compete in races, and films exported for processing and return. Goods exported or imported for purposes of repair only are excluded from statistics, although payments or receipts for repairs are included in the trade statistics. Financial assets such as circulating coin, stocks and bonds are also excluded from the trade statistics.

3. **Valuation:** *Exports* are recorded at the values declared on export documents, which usually reflect the actual selling price or, in the case of non-arms-length transactions, the transfer price used for company accounting purposes. Most exports are valued at the place in Canada where they are laden aboard a carrier for export (e.g. mine, farm or factory) but a significant proportion of exports by water or air reflect values which include transportation charges to the port of export. Some overland shipments to the United States are recorded at a value which includes part or all of the transportation charges to the ultimate destination because such transportation charges cannot be identified and removed.

*Imports* are generally recorded at the values established for Customs duty purposes according to the provisions of the Customs Act. Customs values are identical to selling prices for most arms-length transactions. However, Customs values exceed company transfer prices for most transactions between affiliated firms. (Beginning in 1970, imports of automotive products from the United States have been recorded at company transfer prices rather than Customs values.) Import documents are required to show values which exclude all transportation charges. Some imports from the United States are however purchased on a "delivered" basis and their prices therefore reflect an allowance for transportation costs.

4. **Timing:** Statistics for a month include all shipments for which Customs documents were received at Statistics Canada between the first and last working days of the month and therefore do not represent trade in a calendar period. Individual shipments may not be recorded in statistics until some time after their arrival or departure because of administrative procedures which permit late filing of documents. Trade in electricity and exports of both crude petroleum and natural gas for a given month are included in statistics for the following month because they are collected too late for inclusion in statistics for the month indicated (see *Sources of Statistics*).

5. **Trading Partner Attribution:** *Imports* are attributed to the country from which the goods were first consigned directly to Canada, whether or not this is the country of origin. An exception is made in the case of goods of Central or South American origin consigned to Canada from the United States; such imports are credited to the country of origin.

*Exports* are attributed to the country which is the last known destination of the goods at the time of export. (Many primary products are shipped to entrepôt points, particularly in Europe, for re-export to the ultimate destination which is unknown when the goods leave Canada.) The country classification employed by the External Trade Division of Statistics Canada is designed for purposes of economic geography and therefore does not reflect the views or intentions of the Government of Canada on international issues of recognition, sovereignty or jurisdiction.

2. **Champ d'observation:** Le commerce de marchandises ne comprend que les biens dont le passage d'un côté à l'autre de la frontière canadienne augmente ou diminue le stock de ressources matérielles du Canada. Ainsi, les biens qui seront renvoyés dans le pays exportateur après un court laps de temps sont exclus de la statistique du commerce (lorsque cette intention se dégage des documents de douane). Citons à titre d'exemple les oeuvres d'art prêtées pour une exposition, les véhicules ou les chevaux exportés en vue d'une course, les films exportés pour être développés, puis retournés. Les biens exportés ou importés pour fins de réparation seulement ne sont pas pris en compte, bien que les paiements ou les recettes au titre des réparations soient portés dans la statistique du commerce. Des avoirs financiers comme le numéraire non périmé, les actions et les obligations sont également laissés hors compte.

3. **Evaluation:** Les *exportations* sont présentées selon les valeurs déclarées dans les documents d'exportation; il s'agit habituellement du prix de vente réel ou, dans le cas des opérations entre entreprises affiliées, du prix de transfert adopté par les sociétés à des fins comptables. La plupart des exportations sont évaluées au point du territoire du Canada (mine, ferme ou usine) où elles sont chargées et ainsi confiées à un transporteur en vue de leur exportation, mais une partie importante des exportations par eau ou par air se voit attribuer une valeur qui comprend les frais de transport vers le port d'exportation. Pour certaines livraisons par voie de terre vers les États-Unis, la valeur indiquée comprend en partie ou en totalité les frais de transport jusqu'à la destination ultime parce qu'on ne peut isoler et retrancher ces frais.

Les *importations* sont habituellement présentées selon les valeurs établies aux fins du prélèvement des droits de douane conformément aux dispositions de la Loi sur les douanes. Les valeurs des douanes sont identiques aux prix de vente dans le cas de la plupart des opérations entre parties indépendantes. Toutefois, les valeurs douanières dépassent les prix de transfert des sociétés dans le cas de la majorité des opérations entre entreprises affiliées. (À partir de 1970, les importations de produits de l'industrie automobile en provenance des États-Unis sont indiquées aux prix de transfert et non pas selon les valeurs fixées en douane.) Les valeurs déclarées dans les documents d'importation ne doivent pas comprendre les frais de transport. Certaines importations en provenance des États-Unis sont toutefois sur une base de livraison et leur prix englobe par conséquent les frais de transport.

4. **Période:** Les statistiques d'un mois donné visent toutes les livraisons pour lesquelles Statistique Canada a reçu des documents de douane entre le premier et le dernier jour ouvrable du mois; elles ne présentent donc pas le commerce pour une division normalisée de l'année civile. De diverses livraisons peuvent ne pas être prises en compte dès leur arrivée ou leur départ à cause de la procédure administrative qui donne lieu à une présentation tardive des documents. Le commerce d'énergie électrique et les exportations de pétrole brut et de gaz naturel d'un mois donné sont présentés dans les statistiques du mois suivant parce qu'on obtient les données trop tard pour qu'elles puissent faire partie des statistiques du mois de référence (voir *Sources des statistiques*).

5. **Partenaires commerciaux et attribution:** Les *importations* sont attribuées au pays de première consignation directe des biens au Canada, que ce soit ou non le pays d'origine. On déroge à cette règle dans le cas des biens ayant comme région d'origine l'Amérique centrale ou l'Amérique du Sud et expédiés au Canada depuis les États-Unis; ces importations sont portées au crédit du pays d'origine.

Les *exportations* sont attribuées au pays de dernière destination connue au moment de l'exportation. (De nombreux produits "primaires" sont expédiés vers des points d'entreposage, notamment en Europe, en vue de leur réexportation; la destination ultime de ces produits est inconnue lorsqu'ils quittent le Canada.) La classification des pays utilisée par la Division du commerce extérieur de Statistique Canada a été conçue aux fins de la géographie économique et ne reflète donc pas l'opinion du Gouvernement du Canada relative aux questions de reconnaissance, de souveraineté ou de compétence en matière internationale.

6. **Revisions of Statistics:** The statistics in this report for the current month are preliminary and subject to revision at any time until the January report for the following year has been published. Statistics for previous years are subject to revision in the March issue. Statistical series are adjusted for seasonal variation using Census Method II (X-11 variant); these adjustments are also revised in March of each year.

7. **Indexes of Price and Volume:** With the publication of indexes for April 1975, the weighting system used for the trade price and volume indexes has been changed to correspond with the system used to estimate Gross National Product (G.N.P.) at constant prices. The reference period for the indexes is also being changed from 1968 = 100 to 1971 = 100. The purpose of these changes is to reduce discrepancies between the trade and G.N.P. indexes caused by differences in weighting systems and to align the time references of the various index numbers published by Statistics Canada (see Canadian Statistical Review, May, 1975, p.116).

Before April 1975, the import and export price indexes were calculated using a (Laspeyres) system of fixed weights based on the 1968 pattern of trade. The volume index was derived by dividing (deflating) the value index by the corresponding fixed-weighted price index. This yielded a current-weighted (Paasche) volume index.

In the new indexes, the use of fixed weights for the price indexes and current weights for the volume indexes is reversed. The new price indexes in tables 3, 4, 5, and 6 are current-weighted. The weights are trade quantities for the month, quarter or year to which the index refers and hence change from period to period. The new volume index is derived by dividing the value index by the corresponding current-weighted price index. The resulting volume index is, therefore, weighted with fixed 1971 price weights, as are the measures of G.N.P. components in constant 1971 prices.

The new 1971 trade indexes are based on an expanded set of price indicators selected to represent 1971 trading patterns. Individual price indicators are either commodity unit values calculated directly from the trade statistics or, particularly in the case of end products, price indexes obtained from other Canadian or foreign statistics.

Historical data for the new indexes in tables 3, 4, 5, and 6 from 1971 to 1973 were published as an appendix in the July, August and September 1975 Summaries of External Trade. An explanation of the methodology used to construct the new indexes and an analysis of the impact of the changes will be published in the near future.

8. **Provincial Detail:** Export statistics by province of lading indicate the province in which the goods were first laden aboard a carrier for export, which may not in all cases represent the province in which the goods were grown, extracted or manufactured. Import statistics by province of clearance indicate the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse; this may not always coincide with the province in which the goods are consumed or enter the productive process.

6. **Révision des statistiques:** Les statistiques publiées pour le mois d'observation sont provisoires et susceptibles d'être révisées ou rectifiées en tout temps jusqu'à la parution du bulletin de janvier de l'année suivante. Les statistiques portant sur les années précédentes peuvent être rectifiées dans la publication de mars. Les séries statistiques sont désaisonnalisées selon la *Census Method II* (version X-11); ces ajustements font également l'objet d'une révision chaque année en mars.

7. **Indices des prix et du volume:** À partir de la publication des indices pour le mois d'avril, 1975, le système de pondération employé dans le calcul des indices des prix et du volume du commerce a été aligné avec la pondération des indices employés dans la préparation des chiffres du Produit National Brut (P.N.B.) aux prix constants. La période de référence des indices a été également changée, 1971 = 100 remplaçant 1968 = 100. Ces changements ont visé l'élimination des différences entre les indices du commerce et ceux du P.N.B., différences dont la source était l'incompatibilité des systèmes de pondération. Ils ont également visé l'alignement des périodes de référence de l'ensemble des indices publiés par Statistique Canada. (voir Revue Statistique du Canada, Mai, 1975, p.116).

Avant avril, 1975, les indices des prix à l'importation et à l'exportation se basaient sur un système de pondération fixe du type Laspeyres, d'après la structure du commerce en 1968. Les indices du volume s'obtenaient en divisant (déflétant) l'indice de la valeur par l'indice du prix correspondant. Les indices du volume étaient, en conséquence, des indices du type Paasche, à pondération mobile.

Les nouveaux indices entraînent un renversement des systèmes de pondération. Les indices des prix compris dans les tableaux 3, 4, 5, et 6 sont pondérés d'après les quantités mensuelles, trimestrielles ou annuelles du commerce correspondantes à la période de l'indice. Par conséquent ces pondérations sont variables d'une période à l'autre. Sous le nouveau système, les indices du volume sont encore calculés en divisant l'indice de la valeur par l'indice du prix correspondant. L'indice du volume obtenu est donc implicitement pondéré par les prix fixes de l'année 1971, et correspond aux chiffres du P.N.B. aux prix constants de 1971.

Les nouveaux indices du commerce ont été calculés d'après un échantillon d'indices élémentaires élargi. Ces indices élémentaires proviennent généralement des valeurs unitaires de marchandises sorties des statistiques du commerce. Toutefois, surtout dans le cas des produits finis, des indices de prix canadiens obtenus à partir de sources canadiennes ou étrangères sont également utilisés.

Les données rétrospectives pour les années de 1971 à 1973 portant sur les tableaux 3, 4, 5, et 6 ont été publiées en annexe dans les Sommaires du Commerce extérieur de juillet, août et septembre 1975. Des renseignements concernant la méthodologie employée dans le calcul des nouveaux indices ainsi qu'une analyse des effets du changement de procédure seront publiés dans un proche avenir.

8. **Statistiques provinciales:** Les statistiques des exportations par province de chargement indiquent la province où les biens ont d'abord été confiés à un transporteur en vue de leur exportation; il ne s'agit donc pas toujours de la province où les biens ont été cultivés, extraits ou fabriqués. Les statistiques des importations par province de dédouanement présentent la province où les biens ont passé la douane en vue d'une consommation immédiate ou de leur entreposage en douane; cette province peut différer de la province de consommation ou d'entrée dans l'activité productive.

9. **Principal trading areas:** Effective January, 1976, the "principal trading areas" shown in some tables include new groupings which are defined below:

**Other E.E.C.:** Belgium, Denmark, France, Germany (F.R.), Ireland, Italy, Luxembourg, Netherlands (the U.K. is also a member of the E.E.C. but is shown separately because of the importance of its trade with Canada).

**Other O.E.C.D.:** Austria, Finland, Greece, Iceland, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, Australia, New Zealand. (The E.E.C. countries, United States, Japan and Canada are also members of O.E.C.D. — The Organization for Economic Cooperation and Development).

**Other America:** This group includes all countries and territories of North and South America (other than the United States and Canada) including Greenland, Bermuda and Puerto Rico.

10. **Sources of Further Information:** More detailed monthly, quarterly and annual trade statistics are published in the 65-xxx series of Statistics Canada publications. Detailed descriptions and indexes of the commodity classifications are also available. See the Statistics Canada publications catalogue for descriptions of the contents of the various publications. As a result of continuous research on trade statistics, additional reference materials are published from time to time. For example, *The Reconciliation of U.S.-Canada Trade Statistics*, published by the United States - Canada Trade Statistics Committee, is available on request from the address given below.

Questions concerning details of methods not covered by these notes should be addressed in writing to the Director, External Trade Division, Statistics Canada, Ottawa, Ontario K1A 0V5.

9. **Marchés principaux:** A partir de janvier 1976, les "marchés principaux" apparaissant dans certains tableaux comprennent les nouveaux groupements définis ci-dessous:

**Autres C.E.E.:** Allemagne (R.F.), Belgique, Danemark, France, Irlande, Italie, Luxembourg, Pays-Bas (le Royaume-Uni est aussi membre de la C.E.E. mais il est séparé dans les statistiques à cause de son importance dans le commerce du Canada).

**Autres O.C.D.E.:** Autriche, Espagne, Finlande, Grèce, Islande, Norvège, Portugal, Suède, Suisse, Turquie, Australie, Nouvelle-Zélande. (Les pays membres de la C.E.E., les États-Unis, le Japon et le Canada sont aussi membres de l'O.C.D.E. — l'Organisation pour la coopération et le développement économique.)

**Autres Amérique:** Cette catégorie comprend tous les pays et les territoires de l'Amérique du nord et du sud (sauf les États-Unis et le Canada), y compris le Groënland, les Bermudes et Porto Rico.

10. **Sources de renseignements supplémentaires:** Des statistiques mensuelles, trimestrielles et annuelles plus détaillées sur le commerce paraissent dans la série 65-xxx des publications de Statistique Canada. On peut également se procurer des descriptions détaillées et des index des classifications de marchandises. Veuillez consulter le catalogue des publications de Statistique Canada pour une description du contenu des diverses publications. La recherche continue dans le domaine de la statistique du commerce donne naissance de temps à autre à de nouveaux documents de référence. Ainsi, on peut obtenir à l'adresse mentionnée ci-dessous un document sur le rapprochement des statistiques du commerce États-Unis-Canada publié par le comité de la statistique du commerce États-Unis-Canada.

Toute question au sujet des méthodes employées doit être adressée par écrit au directeur de la Division du commerce extérieur, Statistique Canada, Ottawa, Ontario K1A 0V5.

## SELECTED COMMODITY GROUPINGS (TABLE 3): M.C.C. CONTENTS

## GROUPES DE MARCHANDISES CHOISIS (TABLEAU 3): COMPOSITION EN TERMES DE LA C.M.I.

|  |   |   |
|--|---|---|
| Meat, fresh, chilled or frozen             | 01101 - 01199                                 | Viande fraîche, réfrigérée ou congelée    |
| Fresh fruits                               | 07103 - 07189                                 | Fruits frais                              |
| Fresh vegetables                           | 09103 - 09199                                 | Légumes frais                             |
| Raw sugar                                  | 10119   | Sucre brut                                |
| Cocoa, chocolate, coffee and tea           | 11110 - 11349                                 | Cacao, chocolat, café et thé              |
| Wool, cotton and man-made fibres           | 24209 - 24299 & 24410 - 24499 & 24617 - 24699 | Laine, coton et fibres artificielles      |
| Coal                                       | 26110 - 26189                                 | Charbon                                   |
| Crude petroleum                            | 26410   | Pétrole brut                              |
| Textile fabricated materials               | 36021 - 38999                                 | Ouvrages en matières textiles             |
| Chemicals and related products             | 40003 - 42999                                 | Produits chimiques et produits connexes   |
| Petroleum and coal products                | 43109 - 43997                                 | Dérivés du pétrole et du charbon          |
| Rolling mill products                      | 44403 - 44690                                 | Produits des usines de laminage           |
| Non ferrous metals                         | 45105 - 45999                                 | Métaux non-ferreux                        |

- A. **Sources of Statistics:** Canada's external trade statistics are tabulated from copies of administrative documents collected by Revenue Canada, Customs at its ports across Canada. The Customs Act requires that each time goods are imported into or exported from Canada a document be filed with Customs giving such descriptions of the goods and details of the transaction as are required for the purposes of Customs administration. It follows that the method of compilation of external trade statistics is determined and limited to some extent by Customs regulations and procedures. Where these affect the precise or consistent application of the statistical principles explained in the following section, their impact is described in qualitative terms only.

Statistics on trade in electricity and on exports of crude petroleum and natural gas cannot, for administrative reasons, be obtained from Customs documents. They are instead collected by the Manufacturing and Primary Industries Division of Statistics Canada, with important statistical consequences explained in Note 4 below.

Import statistics for shipments from the United States of less than \$2,500 are estimated on the basis of a 10 per cent sample of such shipments. The size of this sample is at present in excess of 20,000 shipments per month.

Export statistics for shipments of less than \$2,500 from Quebec, Ontario, Manitoba and British Columbia to the United States are estimated on the basis of a 20 per cent sample. The size of this sample is at present in excess of 10,000 shipments per month.

- B. **Concepts and Definitions Used in the Compilation of External Trade Statistics:** The most comprehensive set of principles for the compilation of trade statistics is to be found in *International Trade Statistics: Concepts and Definitions*, published by the United Nations Statistical Office (Series M, No. 52; New York, 1970). The following notes are both a summary of these principles and a description of the choices and exceptions made in the case of Canada's external trade statistics.

1. **System of Trade:** Canadian statistics are tabulated according to the "general" system of trade. Thus *imports* include all goods which have crossed Canada's geographical boundary, whether they are entered through Customs for immediate consumption in Canada or stored in bonded Customs warehouses. *Domestic exports* include goods grown, extracted or manufactured in Canada (including goods of foreign origin which have been materially transformed in Canada). *Re-exports* are exports of goods of foreign origin which have not been materially transformed in Canada (including goods withdrawn for export from bonded Customs warehouses).

The trade statistics do not include exports to Canadian diplomatic or military posts abroad nor imports by foreign diplomatic or military posts in Canada because such posts are considered to be within the geographical boundary of the sponsor country. Purchases or sales of bunker supplies and stores for ships or aircraft engaged in international traffic, tourist purchases and settlers' effects are excluded for practical reasons. Goods which cross the Canadian border for convenience of transportation only are not included in trade statistics.

- A. **Sources des statistiques:** Les statistiques sur le commerce extérieur du Canada sont totalisées à partir des copies des documents administratifs recueillis par Revenu Canada (Douanes) dans ses bureaux de douane par tout le Canada. La Loi sur les douanes exige que chaque fois que des marchandises sont importées au Canada ou exportées du pays, une déclaration soit faite précisant la nature des marchandises et donnant le détail de l'opération commerciale d'après les besoins de la réglementation de l'administration douanière. Il s'ensuit que la méthode de production de statistiques sur le commerce extérieur est déterminée et limitée dans une certaine mesure par les règlements et les procédures des douanes. Lorsque ceux-ci nuisent à l'application précise ou uniforme des principes statistiques exposés dans la section suivante, leur incidence est décrite en termes qualitatifs seulement.

Des statistiques sur le commerce de l'énergie électrique et sur les exportations de pétrole brut et de gaz naturel ne peuvent, pour des raisons administratives, être tirées des documents de douane. Elles sont plutôt recueillies par la Division des industries manufacturières et primaires de Statistique Canada; les conséquences importantes sur le plan statistique sont expliquées à la note 4 ci-dessous.

Les chiffres d'importation portant sur les livraisons en provenance des États-Unis avec une valeur inférieure à \$2,500 sont préparés d'après un échantillon de 10 pour cent. Cet échantillon comprend actuellement plus de 20,000 envois par mois.

Les chiffres d'exportation portant sur les livraisons avec une valeur inférieure à \$2,500 en provenance du Québec, de l'Ontario, du Manitoba et de la Colombie Britannique vers les États-Unis sont préparés d'après un échantillon de 20 pour cent. Cet échantillon comprend actuellement plus de 10,000 envois par mois.

- B. **Concepts et définitions utilisés dans la production de statistiques sur le commerce extérieur:** L'ensemble le plus complet de principes directeurs pour la préparation de ces statistiques est présenté dans *Statistiques du commerce international: concepts et définitions*, publié par le Bureau de statistique des Nations Unies (série M, no 52, New York, 1970). Les notes suivantes résument ces principes et décrivent les choix et les exceptions dans le cas de la statistique du commerce extérieur du Canada.

1. **Système commercial:** Les statistiques canadiennes sont totalisées selon le système commercial "général". Ainsi, les *importations* comprennent tous les biens qui ont franchi les limites géographiques du Canada, qu'ils soient passés par les douanes pour être consommés immédiatement au Canada ou qu'ils aient été entreposés en douane. Les *exportations nationales* comprennent les biens cultivés, extraits ou fabriqués au Canada (y compris les biens d'origine étrangère qui ont été transformés au Canada). Les *réexportations* sont des exportations de biens d'origine étrangère qui n'ont pas été transformés matériellement au Canada (y compris les biens retirés des entrepôts de douane en vue de leur exportation).

La statistique du commerce ne prend pas en compte les exportations vers des missions diplomatiques ou militaires canadiennes à l'étranger ni les importations attribuables à des missions étrangères semblables au Canada, car on considère que ces missions ne se trouvent pas hors des limites géographiques du pays qui les a envoyées. Les achats ou les ventes d'approvisionnement de navires ou d'aéronefs affectés au transport international, les achats des touristes et les effets des migrants sont exclus pour des raisons pratiques. Les biens auxquels on fait franchir la frontière canadienne uniquement pour en faciliter le transport sont laissés hors compte.

2. **Coverage:** Merchandise trade includes only goods which add to or subtract from the stock of material resources in Canada as a result of their movement across the Canadian border. Consequently, goods intended to be returned to the exporting country after a short period of time are excluded from trade statistics (when this intention is apparent from the Customs documentation). Examples of such transactions are works of art loaned for exhibition, vehicles or horses exported to compete in races, and films exported for processing and return. Goods exported or imported for purposes of repair only are excluded from statistics, although payments or receipts for repairs are included in the trade statistics. Financial assets such as circulating coin, stocks and bonds are also excluded from the trade statistics.

3. **Valuation:** *Exports* are recorded at the values declared on export documents, which usually reflect the actual selling price or, in the case of non-arms-length transactions, the transfer price used for company accounting purposes. Most exports are valued at the place in Canada where they are laden aboard a carrier for export (e.g. mine, farm or factory) but a significant proportion of exports by water or air reflect values which include transportation charges to the port of export. Some overland shipments to the United States are recorded at a value which includes part or all of the transportation charges to the ultimate destination because such transportation charges cannot be identified and removed.

*Imports* are generally recorded at the values established for Customs duty purposes according to the provisions of the Customs Act. Customs values are identical to selling prices for most arms-length transactions. However, Customs values exceed company transfer prices for most transactions between affiliated firms. (Beginning in 1970, imports of automotive products from the United States have been recorded at company transfer prices rather than Customs values.) Import documents are required to show values which exclude all transportation charges. Some imports from the United States are however purchased on a "delivered" basis and their prices therefore reflect an allowance for transportation costs.

4. **Timing:** Statistics for a month include all shipments for which Customs documents were received at Statistics Canada between the first and last working days of the month and therefore do not represent trade in a calendar period. Individual shipments may not be recorded in statistics until some time after their arrival or departure because of administrative procedures which permit late filing of documents. Trade in electricity and exports of both crude petroleum and natural gas for a given month are included in statistics for the following month because they are collected too late for inclusion in statistics for the month indicated (see *Sources of Statistics*).

5. **Trading Partner Attribution:** *Imports* are attributed to the country from which the goods were first consigned directly to Canada, whether or not this is the country of origin. An exception is made in the case of goods of Central or South American origin consigned to Canada from the United States; such imports are credited to the country of origin.

*Exports* are attributed to the country which is the last known destination of the goods at the time of export. (Many primary products are shipped to entrepôt points, particularly in Europe, for re-export to the ultimate destination which is unknown when the goods leave Canada.) The country classification employed by the External Trade Division of Statistics Canada is designed for purposes of economic geography and therefore does not reflect the views or intentions of the Government of Canada on international issues of recognition, sovereignty or jurisdiction.

2. **Champ d'observation:** Le commerce de marchandises ne comprend que les biens dont le passage d'un côté à l'autre de la frontière canadienne augmente ou diminue le stock de ressources matérielles du Canada. Ainsi, les biens qui seront renvoyés dans le pays exportateur après un court laps de temps sont exclus de la statistique du commerce (lorsque cette intention se dégage des documents de douane). Citons à titre d'exemple les oeuvres d'art prêtées pour une exposition, les véhicules ou les chevaux exportés en vue d'une course, les films exportés pour être développés, puis retournés. Les biens exportés ou importés pour fins de réparation seulement ne sont pas pris en compte, bien que les paiements ou les recettes au titre des réparations soient portés dans la statistique du commerce. Des avoirs financiers comme le numéraire non périmé, les actions et les obligations sont également laissés hors compte.

3. **Evaluation:** Les *exportations* sont présentées selon les valeurs déclarées dans les documents d'exportation; il s'agit habituellement du prix de vente réel ou, dans le cas des opérations entre entreprises affiliées, du prix de transfert adopté par les sociétés à des fins comptables. La plupart des exportations sont évaluées au point du territoire du Canada (mine, ferme ou usine) où elles sont chargées et ainsi confiées à un transporteur en vue de leur exportation, mais une partie importante des exportations par eau ou par air se voit attribuer une valeur qui comprend les frais de transport vers le port d'exportation. Pour certaines livraisons par voie de terre vers les États-Unis, la valeur indiquée comprend en partie ou en totalité les frais de transport jusqu'à la destination ultime parce qu'on ne peut isoler et retrancher ces frais.

Les *importations* sont habituellement présentées selon les valeurs établies aux fins du prélèvement des droits de douane conformément aux dispositions de la Loi sur les douanes. Les valeurs des douanes sont identiques aux prix de vente dans le cas de la plupart des opérations entre parties indépendantes. Toutefois, les valeurs douanières dépassent les prix de transfert des sociétés dans le cas de la majorité des opérations entre entreprises affiliées. (À partir de 1970, les importations de produits de l'industrie automobile en provenance des États-Unis sont indiquées aux prix de transfert et non pas selon les valeurs fixées en douane.) Les valeurs déclarées dans les documents d'importation ne doivent pas comprendre les frais de transport. Certaines importations en provenance des États-Unis sont toutefois sur une base de livraison et leur prix englobe par conséquent les frais de transport.

4. **Période:** Les statistiques d'un mois donné visent toutes les livraisons pour lesquelles Statistique Canada a reçu des documents de douane entre le premier et le dernier jour ouvrable du mois; elles ne présentent donc pas le commerce pour une division normalisée de l'année civile. De diverses livraisons peuvent ne pas être prises en compte dès leur arrivée ou leur départ à cause de la procédure administrative qui donne lieu à une présentation tardive des documents. Le commerce d'énergie électrique et les exportations de pétrole brut et de gaz naturel d'un mois donné sont présentés dans les statistiques du mois suivant parce qu'on obtient les données trop tard pour qu'elles puissent faire partie des statistiques du mois de référence (voir *Sources des statistiques*).

5. **Partenaires commerciaux et attribution:** Les *importations* sont attribuées au pays de première consignation directe des biens au Canada, que ce soit ou non le pays d'origine. On déroge à cette règle dans le cas des biens ayant comme région d'origine l'Amérique centrale ou l'Amérique du Sud et expédiés au Canada depuis les États-Unis; ces importations sont portées au crédit du pays d'origine.

Les *exportations* sont attribuées au pays de dernière destination connue au moment de l'exportation. (De nombreux produits "primaires" sont expédiés vers des points d'entreposage, notamment en Europe, en vue de leur réexportation; la destination ultime de ces produits est inconnue lorsqu'ils quittent le Canada.) La classification des pays utilisée par la Division du commerce extérieur de Statistique Canada a été conçue aux fins de la géographie économique et ne reflète donc pas l'opinion du Gouvernement du Canada relativement aux questions de reconnaissance, de souveraineté ou de compétence en matière internationale.

6. **Revisions of Statistics:** The statistics in this report for the current month are preliminary and subject to revision at any time until the January report for the following year has been published. Statistics for previous years are subject to revision in the March issue. Statistical series are adjusted for seasonal variation using Census Method II (X-11 variant); these adjustments are also revised in March of each year.

7. **Indexes of Price and Volume:** With the publication of indexes for April 1975, the weighting system used for the trade price and volume indexes has been changed to correspond with the system used to estimate Gross National Product (G.N.P.) at constant prices. The reference period for the indexes is also being changed from 1968 = 100 to 1971 = 100. The purpose of these changes is to reduce discrepancies between the trade and G.N.P. indexes caused by differences in weighting systems and to align the time references of the various index numbers published by Statistics Canada (see Canadian Statistical Review, May, 1975, p.116).

Before April 1975, the import and export price indexes were calculated using a (Laspeyres) system of fixed weights based on the 1968 pattern of trade. The volume index was derived by dividing (deflating) the value index by the corresponding fixed-weighted price index. This yielded a current-weighted (Paasche) volume index.

In the new indexes, the use of fixed weights for the price indexes and current weights for the volume indexes is reversed. The new price indexes in tables 3, 4, 5, and 6 are current-weighted. The weights are trade quantities for the month, quarter or year to which the index refers and hence change from period to period. The new volume index is derived by dividing the value index by the corresponding current-weighted price index. The resulting volume index is, therefore, weighted with fixed 1971 price weights, as are the measures of G.N.P. components in constant 1971 prices.

The new 1971 trade indexes are based on an expanded set of price indicators selected to represent 1971 trading patterns. Individual price indicators are either commodity unit values calculated directly from the trade statistics or, particularly in the case of end products, price indexes obtained from other Canadian or foreign statistics.

Historical data for the new indexes in tables 3, 4, 5, and 6 from 1971 to 1973 were published as an appendix in the July, August and September 1975 Summaries of External Trade. An explanation of the methodology used to construct the new indexes and an analysis of the impact of the changes will be published in the near future.

8. **Provincial Detail:** Export statistics by province of lading indicate the province in which the goods were first laden aboard a carrier for export, which may not in all cases represent the province in which the goods were grown, extracted or manufactured. Import statistics by province of clearance indicate the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse; this may not always coincide with the province in which the goods are consumed or enter the productive process.

6. **Révision des statistiques:** Les statistiques publiées pour le mois d'observation sont provisoires et susceptibles d'être révisées ou rectifiées en tout temps jusqu'à la parution du bulletin de janvier de l'année suivante. Les statistiques portant sur les années précédentes peuvent être rectifiées dans la publication de mars. Les séries statistiques sont désaisonnalisées selon la *Census Method II* (version X-11); ces ajustements font également l'objet d'une révision chaque année en mars.

7. **Indices des prix et du volume:** À partir de la publication des indices pour le mois d'avril, 1975, le système de pondération employé dans le calcul des indices des prix et du volume du commerce a été aligné avec la pondération des indices employés dans la préparation des chiffres du Produit National Brut (P.N.B.) aux prix constants. La période de référence des indices a été également changée, 1971 = 100 remplaçant 1968 = 100. Ces changements ont visé l'élimination des différences entre les indices du commerce et ceux du P.N.B., différences dont la source était l'incompatibilité des systèmes de pondération. Ils ont également visé l'alignement des périodes de référence de l'ensemble des indices publiés par Statistique Canada. (voir Revue Statistique du Canada, Mai, 1975, p.116).

Avant avril, 1975, les indices des prix à l'importation et à l'exportation se basaient sur un système de pondération fixe du type Laspeyres, d'après la structure du commerce en 1968. Les indices du volume s'obtenaient en divisant (déflétant) l'indice de la valeur par l'indice du prix correspondant. Les indices du volume étaient, en conséquence, des indices du type Paasche, à pondération mobile.

Les nouveaux indices entraînent un renversement des systèmes de pondération. Les indices des prix compris dans les tableaux 3, 4, 5, et 6 sont pondérés d'après les quantités mensuelles, trimestrielles ou annuelles du commerce correspondantes à la période de l'indice. Par conséquence ces pondérations sont variables d'une période à l'autre. Sous le nouveau système, les indices du volume sont encore calculés en divisant l'indice de la valeur par l'indice du prix correspondant. L'indice du volume obtenu est donc implicitement pondéré par les prix fixes de l'année 1971, et correspond aux chiffres du P.N.B. aux prix constants de 1971.

Les nouveaux indices du commerce ont été calculés d'après un échantillon d'indices élémentaires élargi. Ces indices élémentaires proviennent généralement des valeurs unitaires de marchandises sorties des statistiques du commerce. Toutefois, surtout dans le cas des produits finis, des indices de prix canadiens obtenus à partir de sources canadiennes ou étrangères sont également utilisés.

Les données rétrospectives pour les années de 1971 à 1973 portant sur les tableaux 3, 4, 5, et 6 ont été publiées en annexe dans les Sommaires du Commerce extérieur de juillet, août et septembre 1975. Des renseignements concernant la méthodologie employée dans le calcul des nouveaux indices ainsi qu'une analyse des effets du changement de procédure seront publiés dans un proche avenir.

8. **Statistiques provinciales:** Les statistiques des exportations par province de chargement indiquent la province où les biens ont d'abord été confiés à un transporteur en vue de leur exportation; il ne s'agit donc pas toujours de la province où les biens ont été cultivés, extraits ou fabriqués. Les statistiques des importations par province de dédouanement présentent la province où les biens ont passé la douane en vue d'une consommation immédiate ou de leur entreposage en douane; cette province peut différer de la province de consommation ou d'entrée dans l'activité productive.

9. **Principal trading areas:** Effective January, 1976, the "principal trading areas" shown in some tables include new groupings which are defined below:

**Other E.E.C.:** Belgium, Denmark, France, Germany (F.R.), Ireland, Italy, Luxembourg, Netherlands (the U.K. is also a member of the E.E.C. but is shown separately because of the importance of its trade with Canada).

**Other O.E.C.D.:** Austria, Finland, Greece, Iceland, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, Australia, New Zealand. (The E.E.C. countries, United States, Japan and Canada are also members of O.E.C.D. — The Organization for Economic Cooperation and Development).

**Other America:** This group includes all countries and territories of North and South America (other than the United States and Canada) including Greenland, Bermuda and Puerto Rico.

10. **Sources of Further Information:** More detailed monthly, quarterly and annual trade statistics are published in the 65-xxx series of Statistics Canada publications. Detailed descriptions and indexes of the commodity classifications are also available. See the Statistics Canada publications catalogue for descriptions of the contents of the various publications. As a result of continuous research on trade statistics, additional reference materials are published from time to time. For example, *The Reconciliation of U.S.-Canada Trade Statistics*, published by the United States - Canada Trade Statistics Committee, is available on request from the address given below.

Questions concerning details of methods not covered by these notes should be addressed in writing to the Director, External Trade Division, Statistics Canada, Ottawa, Ontario K1A 0V5.

9. **Marchés principaux:** A partir de janvier 1976, les "marchés principaux" apparaissant dans certains tableaux comprennent les nouveaux groupements définis ci-dessous:

**Autres C.E.E.:** Allemagne (R.F.), Belgique, Danemark, France, Irlande, Italie, Luxembourg, Pays-Bas (le Royaume-Uni est aussi membre de la C.E.E. mais il est séparé dans les statistiques à cause de son importance dans le commerce du Canada).

**Autres O.C.D.E.:** Autriche, Espagne, Finlande, Grèce, Islande, Norvège, Portugal, Suède, Suisse, Turquie, Australie, Nouvelle-Zélande. (Les pays membres de la C.E.E., les États-Unis, le Japon et le Canada sont aussi membres de l'O.C.D.E. — l'Organisation pour la coopération et le développement économique.)

**Autres Amérique:** Cette catégorie comprend tous les pays et les territoires de l'Amérique du nord et du sud (sauf les États-Unis et le Canada), y compris le Groënland, les Bermudes et Porto Rico.

10. **Sources de renseignements supplémentaires:** Des statistiques mensuelles, trimestrielles et annuelles plus détaillées sur le commerce paraissent dans la série 65-xxx des publications de Statistique Canada. On peut également se procurer des descriptions détaillées et des index des classifications de marchandises. Veuillez consulter le catalogue des publications de Statistique Canada pour une description du contenu des diverses publications. La recherche continue dans le domaine de la statistique du commerce donne naissance de temps à autre à de nouveaux documents de référence. Ainsi, on peut obtenir à l'adresse mentionnée ci-dessous un document sur le rapprochement des statistiques du commerce États-Unis-Canada publié par le comité de la statistique du commerce États-Unis-Canada.

Toute question au sujet des méthodes employées doit être adressée par écrit au directeur de la Division du commerce extérieur, Statistique Canada, Ottawa, Ontario K1A 0V5.

## SELECTED COMMODITY GROUPINGS (TABLE 3): M.C.C. CONTENTS

## GROUPES DE MARCHANDISES CHOISIS (TABLEAU 3): COMPOSITION EN TERMES DE LA C.M.I.

|  |   |   |
|--|---|---|
| Meat, fresh, chilled or frozen             | 01101 - 01199                                 | Viande fraîche, réfrigérée ou congelée    |
| Fresh fruits                               | 07103 - 07189                                 | Fruits frais                              |
| Fresh vegetables                           | 09103 - 09199                                 | Légumes frais                             |
| Raw sugar                                  | 10119   | Sucre brut                                |
| Cocoa, chocolate, coffee and tea           | 11110 - 11349                                 | Cacao, chocolat, café et thé              |
| Wool, cotton and man-made fibres           | 24209 - 24299 & 24410 - 24499 & 24617 - 24699 | Laine, coton et fibres artificielles      |
| Coal                                       | 26110 - 26189                                 | Charbon                                   |
| Crude petroleum                            | 26410   | Pétrole brut                              |
| Textile fabricated materials               | 36021 - 38999                                 | Ouvrages en matières textiles             |
| Chemicals and related products             | 40003 - 42999                                 | Produits chimiques et produits connexes   |
| Petroleum and coal products                | 43109 - 43997                                 | Dérivés du pétrole et du charbon          |
| Rolling mill products                      | 44403 - 44690                                 | Produits des usines de laminage           |
| Non ferrous metals                         | 45105 - 45999                                 | Métaux non-ferreux                        |
| Metal fabricated basic products            | 46113 - 46999                                 | Ouvrages de base en laminage              |
| Industrial machinery                       | 50119 - 52999                                 | Machinerie industrielle                   |
| Agricultural machinery, including tractors | 54109 - 55199                                 | Machinerie agricole y compris tracteurs   |
| Passenger automobiles and chassis          | 58104 - 58149                                 | Voitures particulières et châssis         |
| Trucks and other motor vehicles            | 58304 - 58799                                 | Camions et autres véhicules moteurs       |
| Motor vehicle engines and parts            | 58802 - 58849                                 | Moteurs de véhicules auto et pièces       |
| Motor vehicle parts, except engines        | 58909 - 58999                                 | Pièces de véhicules auto sauf moteurs     |
| Communication and related equipment        | 63419 - 63999                                 | Equipelement et matériel de communication |
| Office machines and equipment              | 77104 - 77199                                 | Machines et matériel de bureau            |
| Apparel and apparel accessories            | 78119 - 78999                                 | Vêtements et accessoires de vêtement      |

## SELECTED COMMODITY GROUPINGS (TABLE 4): X.C.C. CONTENTS.

## GROUPES DE MARCHANDISES CHOISIS (TABLEAU 4): COMPOSITION EN TERMES DE LA C.M.E.

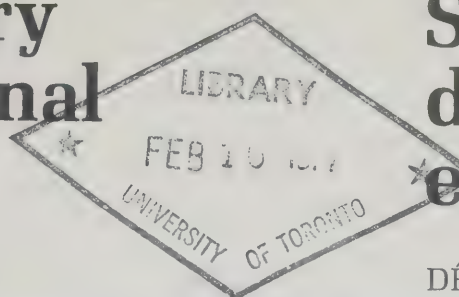

|  |                       |  |
|--|-----------------------|--|
| Meat, fresh, chilled or frozen             | 01101 - 01199         | Viande fraîche, réfrigérée ou congelée       |
| Fish and fish preparations                 | 03106 - 04699         | Poissons et préparations de poissons         |
| Barley                                     | 06119                 | Orge   |
| Wheat                                      | 06161 - 06169         | Blé  |
| Rapeseed                                   | 21240                 | Graine de colza                              |
| Iron ores and concentrates                 | 25104 - 25116         | Minerais et concentrés de fer                |
| Copper in ores, concentrates and scrap     | 25310 - 25390         | Minerais, concentrés et déchets de cuivre    |
| Nickel in ores, concentrates and scrap     | 25520 - 25540         | Minerais, concentrés et déchets de nickel    |
| Crude petroleum                            | 26410                 | Pétrole brut                                 |

## TABLE OF CONTENTS

|   |  |
|---|--|
| <b>Explanatory Notes</b> .....  |  |
| Selected Commodity Groupings (Tables 3 and 4):<br>M.C.C. and X.C.C. Contents..... |  |
| <b>I Analytical Charts and Tables</b> .....                                       |  |
| Charts  |  |
| I Imports, Exports, and Trade Balance .....                                       |  |
| II Volume and Price Indexes .....   |  |
| III Current Values and Price Indexes by<br>Section .....                          |  |
| IV Imports and Exports by Principal Trading<br>Areas.....                         |  |
| V Major Commodity Aggregates .....  |  |
| Tables  |  |
| 1. Imports from Principal Trading Areas.....                                      |  |
| 2. Exports to Principal Trading Areas.....  |  |
| 3. Imports of Selected Commodity Groupings.....                                   |  |
| 4. Domestic Exports of Selected Commodity<br>Groupings.....                       |  |
| 5. Price and Volume Indexes of Imports.....                                       |  |
| 6. Price and Volume Indexes of Domestic<br>Exports.....                           |  |
| <b>II Imports</b> .....   |  |
| Tables  |  |
| M-1. Imports from Principal Trading Areas.....                                    |  |
| M-2. Imports by Country.....  |  |
| M-3. Imports by Commodity Category.....   |  |
| M-4. Imports by Province of Clearance .....                                       |  |
| <b>III Exports</b> .....  |  |
| Tables  |  |
| X-1. Exports to Principal Trading Areas.....                                      |  |
| X-2. Domestic Exports by Country .....  |  |
| X-3. Domestic Exports by Commodity Category.....                                  |  |
| X-4. Exports by Province of Lading.....   |  |

## TABLE DES MATIERES

|   |      |
|---|------|
|   | Page |
| <b>Notes Explicatives</b> .....   | 39   |
| Groupes de marchandises choisis (Tableaux 3 et 4):<br>composition en termes de la C.M.I. et C.M.E. .... | 43   |
| <b>I Graphiques et tableaux analytiques</b> .....   | 3    |
| Graphiques  |      |
| I Importations, Exportations et balance commerciale.....  | 4    |
| II Indices du volume et des prix .....  | 4    |
| III Valeurs courantes et indices des prix par<br>section .....  | 5    |
| IV Importations et exportations par marchés<br>principaux .....   | 6    |
| V Principaux groupements de marchandises .....  | 6    |
| Tableaux  |      |
| 1. Importations en provenance des marchés principaux.....   | 7    |
| 2. Exportations vers les marchés principaux .....   | 7    |
| 3. Importations, groupes de marchandises choisis.....   | 8    |
| 4. Exportations nationales, groupes de marchandises<br>choisis.....                                     | 9    |
| 5. Indices des prix et du volume des importations.....  | 10   |
| 6. Indices des prix et du volume des exportations<br>nationales.....                                    | 11   |
| <b>II Importations</b> .....  | 13   |
| Tableaux  |      |
| M-1. Importations en provenance des marchés<br>principaux .....   | 14   |
| M-2. Importations par pays.....   | 15   |
| M-3. Importations par catégorie de marchandises.....  | 18   |
| M-4. Importations par province de dédouanement .....  | 26   |
| <b>III Exportations</b> .....   | 27   |
| Tableaux  |      |
| X-1. Exportations vers les marchés principaux .....   | 28   |
| X-2. Exportations nationales par pays.....  | 29   |
| X-3. Exportations nationales par catégorie de<br>marchandises .....                                     | 32   |
| X-4. Exportations par province de chargement .....  | 38   |

\* Includes Yukon - Y compris le Yukon

**A. Sources of Statistics:** Canada's external trade statistics are tabulated from copies of administrative documents collected by Revenue Canada, Customs at its ports across Canada. The Customs Act requires that each time goods are imported into or exported from Canada a document be filed with Customs giving such descriptions of the goods and details of the transaction as are required for the purposes of Customs administration. It follows that the method of compilation of external trade statistics is determined and limited to some extent by Customs regulations and procedures. Where these affect the precise or consistent application of the statistical principles explained in the following section, their impact is described in qualitative terms only.

Statistics on trade in electricity and on exports of crude petroleum and natural gas cannot, for administrative reasons, be obtained from Customs documents. They are instead collected by the Manufacturing and Primary Industries Division of Statistics Canada, with important statistical consequences explained in Note 4 below.

Import statistics for shipments from the United States of less than \$2,500 are estimated on the basis of a 10 per cent sample of such shipments. The size of this sample is at present in excess of 20,000 shipments per month.

Export statistics for shipments of less than \$2,500 from Quebec, Ontario, Manitoba and British Columbia to the United States are estimated on the basis of a 20 per cent sample. The size of this sample is at present in excess of 10,000 shipments per month.

**B. Concepts and Definitions Used in the Compilation of External Trade Statistics:** The most comprehensive set of principles for the compilation of trade statistics is to be found in *International Trade Statistics: Concepts and Definitions*, published by the United Nations Statistical Office (Series M, No. 52; New York, 1970). The following notes are both a summary of these principles and a description of the choices and exceptions made in the case of Canada's external trade statistics.

**1. System of Trade:** Canadian statistics are tabulated according to the "general" system of trade. Thus *imports* include all goods which have crossed Canada's geographical boundary, whether they are entered through Customs for immediate consumption in Canada or stored in bonded Customs warehouses. *Domestic exports* include goods grown, extracted or manufactured in Canada (including goods of foreign origin which have been materially transformed in Canada). *Re-exports* are exports of goods of foreign origin which have not been materially transformed in Canada (including goods withdrawn for export from bonded Customs warehouses).

The trade statistics do not include exports to Canadian diplomatic or military posts abroad nor imports by foreign diplomatic or military posts in Canada because such posts are considered to be within the geographical boundary of the sponsor country. Purchases or sales of bunker supplies and stores for ships or aircraft engaged in international traffic, tourist purchases and settlers' effects are excluded for practical reasons. Goods which cross the Canadian border for convenience of transportation only are not included in trade statistics.

**A. Sources des statistiques:** Les statistiques sur le commerce extérieur du Canada sont totalisées à partir des copies des documents administratifs recueillis par Revenu Canada (Douanes) dans ses bureaux de douane par tout le Canada. La Loi sur les douanes exige que chaque fois que des marchandises sont importées au Canada ou exportées du pays, une déclaration soit faite précisant la nature des marchandises et donnant le détail de l'opération commerciale d'après les besoins de la réglementation de l'administration douanière. Il s'ensuit que la méthode de production de statistiques sur le commerce extérieur est déterminée et limitée dans une certaine mesure par les règlements et les procédures des douanes. Lorsque ceux-ci nuisent à l'application précise ou uniforme des principes statistiques exposés dans la section suivante, leur incidence est décrite en termes qualitatifs seulement.

Des statistiques sur le commerce de l'énergie électrique et sur les exportations de pétrole brut et de gaz naturel ne peuvent, pour des raisons administratives, être tirées des documents de douane. Elles sont plutôt recueillies par la Division des industries manufacturières et primaires de Statistique Canada; les conséquences importantes sur le plan statistique sont expliquées à la note 4 ci-dessous.

Les chiffres d'importation portant sur les livraisons en provenance des États-Unis avec une valeur inférieure à \$2,500 sont préparés d'après un échantillon de 10 pour cent. Cet échantillon comprend actuellement plus de 20,000 envois par mois.

Les chiffres d'exportation portant sur les livraisons avec une valeur inférieure à \$2,500 en provenance du Québec, de l'Ontario, du Manitoba et de la Colombie Britannique vers les États-Unis sont préparés d'après un échantillon de 20 pour cent. Cet échantillon comprend actuellement plus de 10,000 envois par mois.

**B. Concepts et définitions utilisés dans la production de statistiques sur le commerce extérieur:** L'ensemble le plus complet de principes directeurs pour la préparation de ces statistiques est présenté dans *Statistiques du commerce international: concepts et définitions*, publié par le Bureau de statistique des Nations Unies (série M, no 52, New York, 1970). Les notes suivantes résument ces principes et décrivent les choix et les exceptions dans le cas de la statistique du commerce extérieur du Canada.

**1. Système commercial:** Les statistiques canadiennes sont totalisées selon le système commercial "général". Ainsi, les *importations* comprennent tous les biens qui ont franchi les limites géographiques du Canada, qu'ils soient passés par les douanes pour être consommés immédiatement au Canada ou qu'ils aient été entreposés en douane. Les *exportations nationales* comprennent les biens cultivés, extraits ou fabriqués au Canada (y compris les biens d'origine étrangère qui ont été transformés au Canada). Les *réexportations* sont des exportations de biens d'origine étrangère qui n'ont pas été transformés matériellement au Canada (y compris les biens retirés des entrepôts de douane en vue de leur exportation).

La statistique du commerce ne prend pas en compte les exportations vers des missions diplomatiques ou militaires canadiennes à l'étranger ni les importations attribuables à des missions étrangères semblables au Canada, car on considère que ces missions ne se trouvent pas hors des limites géographiques du pays qui les a envoyées. Les achats ou les ventes d'approvisionnement de navires ou d'aéronefs affectés au transport international, les achats des touristes et les effets des migrants sont exclus pour des raisons pratiques. Les biens auxquels on fait franchir la frontière canadienne uniquement pour en faciliter le transport sont laissés hors compte.

2. **Coverage:** Merchandise trade includes only goods which add to or subtract from the stock of material resources in Canada as a result of their movement across the Canadian border. Consequently, goods intended to be returned to the exporting country after a short period of time are excluded from trade statistics (when this intention is apparent from the Customs documentation). Examples of such transactions are works of art loaned for exhibition, vehicles or horses exported to compete in races, and films exported for processing and return. Goods exported or imported for purposes of repair only are excluded from statistics, although payments or receipts for repairs are included in the trade statistics. Financial assets such as circulating coin, stocks and bonds are also excluded from the trade statistics.

3. **Valuation:** *Exports* are recorded at the values declared on export documents, which usually reflect the actual selling price or, in the case of non-arms-length transactions, the transfer price used for company accounting purposes. Most exports are valued at the place in Canada where they are laden aboard a carrier for export (e.g. mine, farm or factory) but a significant proportion of exports by water or air reflect values which include transportation charges to the port of export. Some overland shipments to the United States are recorded at a value which includes part or all of the transportation charges to the ultimate destination because such transportation charges cannot be identified and removed.

*Imports* are generally recorded at the values established for Customs duty purposes according to the provisions of the Customs Act. Customs values are identical to selling prices for most arms-length transactions. However, Customs values exceed company transfer prices for most transactions between affiliated firms. (Beginning in 1970, imports of automotive products from the United States have been recorded at company transfer prices rather than Customs values.) Import documents are required to show values which exclude all transportation charges. Some imports from the United States are however purchased on a "delivered" basis and their prices therefore reflect an allowance for transportation costs.

4. **Timing:** Statistics for a month include all shipments for which Customs documents were received at Statistics Canada between the first and last working days of the month and therefore do not represent trade in a calendar period. Individual shipments may not be recorded in statistics until some time after their arrival or departure because of administrative procedures which permit late filing of documents. Trade in electricity and exports of both crude petroleum and natural gas for a given month are included in statistics for the following month because they are collected too late for inclusion in statistics for the month indicated (see *Sources of Statistics*).

5. **Trading Partner Attribution:** *Imports* are attributed to the country from which the goods were first consigned directly to Canada, whether or not this is the country of origin. An exception is made in the case of goods of Central or South American origin consigned to Canada from the United States; such imports are credited to the country of origin.

*Exports* are attributed to the country which is the last known destination of the goods at the time of export. (Many primary products are shipped to entrepôt points, particularly in Europe, for re-export to the ultimate destination which is unknown when the goods leave Canada.) The country classification employed by the External Trade Division of Statistics Canada is designed for purposes of economic geography and therefore does not reflect the views or intentions of the Government of Canada on international issues of recognition, sovereignty or jurisdiction.

2. **Champ d'observation:** Le commerce de marchandises ne comprend que les biens dont le passage d'un côté à l'autre de la frontière canadienne augmente ou diminue le stock de ressources matérielles du Canada. Ainsi, les biens qui seront renvoyés dans le pays exportateur après un court laps de temps sont exclus de la statistique du commerce (lorsque cette intention se dégage des documents de douane). Citons à titre d'exemple les oeuvres d'art prêtées pour une exposition, les véhicules ou les chevaux exportés en vue d'une course, les films exportés pour être développés, puis retournés. Les biens exportés ou importés pour fins de réparation seulement ne sont pas pris en compte, bien que les paiements ou les recettes au titre des réparations soient portés dans la statistique du commerce. Des avoirs financiers comme le numéraire non périmé, les actions et les obligations sont également laissés hors compte.

3. **Evaluation:** Les *exportations* sont présentées selon les valeurs déclarées dans les documents d'exportation; il s'agit habituellement du prix de vente réel ou, dans le cas des opérations entre entreprises affiliées, du prix de transfert adopté par les sociétés à des fins comptables. La plupart des exportations sont évaluées au point du territoire du Canada (mine, ferme ou usine) où elles sont chargées et ainsi confiées à un transporteur en vue de leur exportation, mais une partie importante des exportations par eau ou par air se voit attribuer une valeur qui comprend les frais de transport vers le port d'exportation. Pour certaines livraisons par voie de terre vers les États-Unis, la valeur indiquée comprend en partie ou en totalité les frais de transport jusqu'à la destination ultime parce qu'on ne peut isoler et retrancher ces frais.

Les *importations* sont habituellement présentées selon les valeurs établies aux fins du prélèvement des droits de douane conformément aux dispositions de la Loi sur les douanes. Les valeurs des douanes sont identiques aux prix de vente dans le cas de la plupart des opérations entre parties indépendantes. Toutefois, les valeurs douanières dépassent les prix de transfert des sociétés dans le cas de la majorité des opérations entre entreprises affiliées. (À partir de 1970, les importations de produits de l'industrie automobile en provenance des États-Unis sont indiquées aux prix de transfert et non pas selon les valeurs fixées en douane.) Les valeurs déclarées dans les documents d'importation ne doivent pas comprendre les frais de transport. Certaines importations en provenance des États-Unis sont toutefois sur une base de livraison et leur prix englobe par conséquent les frais de transport.

4. **Période:** Les statistiques d'un mois donné visent toutes les livraisons pour lesquelles Statistique Canada a reçu des documents de douane entre le premier et le dernier jour ouvrable du mois; elles ne présentent donc pas le commerce pour une division normalisée de l'année civile. De diverses livraisons peuvent ne pas être prises en compte dès leur arrivée ou leur départ à cause de la procédure administrative qui donne lieu à une présentation tardive des documents. Le commerce d'énergie électrique et les exportations de pétrole brut et de gaz naturel d'un mois donné sont présentés dans les statistiques du mois suivant parce qu'on obtient les données trop tard pour qu'elles puissent faire partie des statistiques du mois de référence (voir *Sources des statistiques*).

5. **Partenaires commerciaux et attribution:** Les *importations* sont attribuées au pays de première consignation directe des biens au Canada, que ce soit ou non le pays d'origine. On déroge à cette règle dans le cas des biens ayant comme région d'origine l'Amérique centrale ou l'Amérique du Sud et expédiés au Canada depuis les États-Unis; ces importations sont portées au crédit du pays d'origine.

Les *exportations* sont attribuées au pays de dernière destination connue au moment de l'exportation. (De nombreux produits "primaires" sont expédiés vers des points d'entreposage, notamment en Europe, en vue de leur réexportation; la destination ultime de ces produits est inconnue lorsqu'ils quittent le Canada.) La classification des pays utilisée par la Division du commerce extérieur de Statistique Canada a été conçue aux fins de la géographie économique et ne reflète donc pas l'opinion du Gouvernement du Canada relativement aux questions de reconnaissance, de souveraineté ou de compétence en matière internationale.

6. **Revisions of Statistics:** The statistics in this report for the current month are preliminary and subject to revision at any time until the January report for the following year has been published. Statistics for previous years are subject to revision in the March issue. Statistical series are adjusted for seasonal variation using Census Method II (X-11 variant); these adjustments are also revised in March of each year.

7. **Indexes of Price and Volume:** With the publication of indexes for April 1975, the weighting system used for the trade price and volume indexes has been changed to correspond with the system used to estimate Gross National Product (G.N.P.) at constant prices. The reference period for the indexes is also being changed from 1968 = 100 to 1971 = 100. The purpose of these changes is to reduce discrepancies between the trade and G.N.P. indexes caused by differences in weighting systems and to align the time references of the various index numbers published by Statistics Canada (see Canadian Statistical Review, May, 1975, p.116).

Before April 1975, the import and export price indexes were calculated using a (Laspeyres) system of fixed weights based on the 1968 pattern of trade. The volume index was derived by dividing (deflating) the value index by the corresponding fixed-weighted price index. This yielded a current-weighted (Paasche) volume index.

In the new indexes, the use of fixed weights for the price indexes and current weights for the volume indexes is reversed. The new price indexes in tables 3, 4, 5, and 6 are current-weighted. The weights are trade quantities for the month, quarter or year to which the index refers and hence change from period to period. The new volume index is derived by dividing the value index by the corresponding current-weighted price index. The resulting volume index is, therefore, weighted with fixed 1971 price weights, as are the measures of G.N.P. components in constant 1971 prices.

The new 1971 trade indexes are based on an expanded set of price indicators selected to represent 1971 trading patterns. Individual price indicators are either commodity unit values calculated directly from the trade statistics or, particularly in the case of end products, price indexes obtained from other Canadian or foreign statistics.

Historical data for the new indexes in tables 3, 4, 5, and 6 from 1971 to 1973 were published as an appendix in the July, August and September 1975 Summaries of External Trade. An explanation of the methodology used to construct the new indexes and an analysis of the impact of the changes will be published in the near future.

8. **Provincial Detail:** Export statistics by province of lading indicate the province in which the goods were first laden aboard a carrier for export, which may not in all cases represent the province in which the goods were grown, extracted or manufactured. Import statistics by province of clearance indicate the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse; this may not always coincide with the province in which the goods are consumed or enter the productive process.

6. **Révision des statistiques:** Les statistiques publiées pour le mois d'observation sont provisoires et susceptibles d'être révisées ou rectifiées en tout temps jusqu'à la parution du bulletin de janvier de l'année suivante. Les statistiques portant sur les années précédentes peuvent être rectifiées dans la publication de mars. Les séries statistiques sont désaisonnalisées selon la *Census Method II* (version X-11); ces ajustements font également l'objet d'une révision chaque année en mars.

7. **Indices des prix et du volume:** À partir de la publication des indices pour le mois d'avril, 1975, le système de pondération employé dans le calcul des indices des prix et du volume du commerce a été aligné avec la pondération des indices employés dans la préparation des chiffres du Produit National Brut (P.N.B.) aux prix constants. La période de référence des indices a été également changée, 1971 = 100 remplaçant 1968 = 100. Ces changements ont visé l'élimination des différences entre les indices du commerce et ceux du P.N.B., différences dont la source était l'incompatibilité des systèmes de pondération. Ils ont également visé l'alignement des périodes de référence de l'ensemble des indices publiés par Statistique Canada. (voir Revue Statistique du Canada, Mai, 1975, p.116).

Avant avril, 1975, les indices des prix à l'importation et à l'exportation se basaient sur un système de pondération fixe du type Laspeyres, d'après la structure du commerce en 1968. Les indices du volume s'obtenaient en divisant (déflétant) l'indice de la valeur par l'indice du prix correspondant. Les indices du volume étaient, en conséquence, des indices du type Paasche, à pondération mobile.

Les nouveaux indices entraînent un renversement des systèmes de pondération. Les indices des prix compris dans les tableaux 3, 4, 5, et 6 sont pondérés d'après les quantités mensuelles, trimestrielles ou annuelles du commerce correspondantes à la période de l'indice. Par conséquence ces pondérations sont variables d'une période à l'autre. Sous le nouveau système, les indices du volume sont encore calculés en divisant l'indice de la valeur par l'indice du prix correspondant. L'indice du volume obtenu est donc implicitement pondéré par les prix fixes de l'année 1971, et correspond aux chiffres du P.N.B. aux prix constants de 1971.

Les nouveaux indices du commerce ont été calculés d'après un échantillon d'indices élémentaires élargi. Ces indices élémentaires proviennent généralement des valeurs unitaires de marchandises sorties des statistiques du commerce. Toutefois, surtout dans le cas des produits finis, des indices de prix canadiens obtenus à partir de sources canadiennes ou étrangères sont également utilisés.

Les données rétrospectives pour les années de 1971 à 1973 portant sur les tableaux 3, 4, 5, et 6 ont été publiées en annexe dans les Sommaires du Commerce extérieur de juillet, août et septembre 1975. Des renseignements concernant la méthodologie employée dans le calcul des nouveaux indices ainsi qu'une analyse des effets du changement de procédure seront publiés dans un proche avenir.

8. **Statistiques provinciales:** Les statistiques des exportations par province de chargement indiquent la province où les biens ont d'abord été confiés à un transporteur en vue de leur exportation; il ne s'agit donc pas toujours de la province où les biens ont été cultivés, extraits ou fabriqués. Les statistiques des importations par province de dédouanement présentent la province où les biens ont passé la douane en vue d'une consommation immédiate ou de leur entreposage en douane; cette province peut différer de la province de consommation ou d'entrée dans l'activité productive.

9. **Principal trading areas:** Effective January, 1976, the "principal trading areas" shown in some tables include new groupings which are defined below:

**Other E.E.C.:** Belgium, Denmark, France, Germany (F.R.), Ireland, Italy, Luxembourg, Netherlands (the U.K. is also a member of the E.E.C. but is shown separately because of the importance of its trade with Canada).

**Other O.E.C.D.:** Austria, Finland, Greece, Iceland, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, Australia, New Zealand. (The E.E.C. countries, United States, Japan and Canada are also members of O.E.C.D. — The Organization for Economic Cooperation and Development).

**Other America:** This group includes all countries and territories of North and South America (other than the United States and Canada) including Greenland, Bermuda and Puerto Rico.

10. **Sources of Further Information:** More detailed monthly, quarterly and annual trade statistics are published in the 65-xxx series of Statistics Canada publications. Detailed descriptions and indexes of the commodity classifications are also available. See the Statistics Canada publications catalogue for descriptions of the contents of the various publications. As a result of continuous research on trade statistics, additional reference materials are published from time to time. For example, *The Reconciliation of U.S.-Canada Trade Statistics*, published by the United States - Canada Trade Statistics Committee, is available on request from the address given below.

Questions concerning details of methods not covered by these notes should be addressed in writing to the Director, External Trade Division, Statistics Canada, Ottawa, Ontario K1A 0V5.

9. **Marchés principaux:** A partir de janvier 1976, les "marchés principaux" apparaissant dans certains tableaux comprennent les nouveaux groupements définis ci-dessous:

**Autres C.E.E.:** Allemagne (R.F.), Belgique, Danemark, France, Irlande, Italie, Luxembourg, Pays-Bas (le Royaume-Uni est aussi membre de la C.E.E. mais il est séparé dans les statistiques à cause de son importance dans le commerce du Canada).

**Autres O.C.D.E.:** Autriche, Espagne, Finlande, Grèce, Islande, Norvège, Portugal, Suède, Suisse, Turquie, Australie, Nouvelle-Zélande. (Les pays membres de la C.E.E., les États-Unis, le Japon et le Canada sont aussi membres de l'O.C.D.E. — l'Organisation pour la coopération et le développement économique.)

**Autres Amérique:** Cette catégorie comprend tous les pays et les territoires de l'Amérique du nord et du sud (sauf les États-Unis et le Canada), y compris le Groënland, les Bermudes et Porto Rico.

10. **Sources de renseignements supplémentaires:** Des statistiques mensuelles, trimestrielles et annuelles plus détaillées sur le commerce paraissent dans la série 65-xxx des publications de Statistique Canada. On peut également se procurer des descriptions détaillées et des index des classifications de marchandises. Veuillez consulter le catalogue des publications de Statistique Canada pour une description du contenu des diverses publications. La recherche continue dans le domaine de la statistique du commerce donne naissance de temps à autre à de nouveaux documents de référence. Ainsi, on peut obtenir à l'adresse mentionnée ci-dessous un document sur le rapprochement des statistiques du commerce États-Unis-Canada publié par le comité de la statistique du commerce États-Unis-Canada.

Toute question au sujet des méthodes employées doit être adressée par écrit au directeur de la Division du commerce extérieur, Statistique Canada, Ottawa, Ontario K1A 0V5.

## SELECTED COMMODITY GROUPINGS (TABLE 3): M.C.C. CONTENTS

## GROUPES DE MARCHANDISES CHOISIS (TABLEAU 3): COMPOSITION EN TERMES DE LA C.M.I.

|  |   |   |
|--|---|---|
| Meat, fresh, chilled or frozen             | 01101 - 01199                                 | Viande fraîche, réfrigérée ou congelée  |
| Fresh fruits                               | 07103 - 07189                                 | Fruits frais                            |
| Fresh vegetables                           | 09103 - 09199                                 | Légumes frais                           |
| Raw sugar                                  | 10119   | Sucre brut                              |
| Cocoa, chocolate, coffee and tea           | 11110 - 11349                                 | Cacao, chocolat, café et thé            |
| Wool, cotton and man-made fibres           | 24209 - 24299 & 24410 - 24499 & 24617 - 24699 | Laine, coton et fibres artificielles    |
| Coal                                       | 26110 - 26189                                 | Charbon                                 |
| Crude petroleum                            | 26410   | Pétrole brut                            |
| Textile fabricated materials               | 36021 - 38999                                 | Ouvrages en matières textiles           |
| Chemicals and related products             | 40003 - 42999                                 | Produits chimiques et produits connexes |
| Petroleum and coal products                | 43109 - 43997                                 | Dérivés du pétrole et du charbon        |
| Rolling mill products                      | 44403 - 44690                                 | Produits des usines de laminage         |
| Non ferrous metals                         | 45105 - 45999                                 | Métaux non-ferreux                      |
| Metal fabricated basic products            | 46113 - 46999                                 | Ouvrages de base en laminage            |
| Industrial machinery                       | 50119 - 52999                                 | Machinerie industrielle                 |
| Agricultural machinery, including tractors | 54109 - 55199                                 | Machinerie agricole y compris tracteurs |
| Passenger automobiles and chassis          | 58104 - 58149                                 | Voitures particulières et châssis       |
| Trucks and other motor vehicles            | 58304 - 58799                                 | Camions et autres véhicules moteurs     |
| Motor vehicle engines and parts            | 58802 - 58849                                 | Moteurs de véhicules auto et pièces     |
| Motor vehicle parts, except engines        | 58909 - 58999                                 | Pièces de véhicules auto sauf moteurs   |
| Communication and related equipment        | 63419 - 63999                                 | Équipement et matériel de communication |
| Office machines and equipment              | 77104 - 77199                                 | Machines et matériel de bureau          |
| Apparel and apparel accessories            | 78119 - 78999                                 | Vêtements et accessoires de vêtement    |

## INTRODUCTION

This paper describes the new index numbers of volume and price in merchandise trade. The new indexes, which were first published in the July 1975 issue of the *Summary of External Trade* (Catalogue 65-001), differ from the previous series in a number of important respects. Their reference period has changed from 1968 to 1971; the elementary indexes reflect a different and larger selection; and the price index is of the Paasche type rather than Laspeyres as was the case for the previous series.

The major purpose of this paper is to provide users with a technical guide on how the indexes are constructed, on the criteria adopted to select indicators of price changes, and on the availability of historical series in raw and seasonally adjusted form. It also includes a discussion of the problems associated with the use of unit values rather than specification prices and an analysis of the effects of different weighting systems on the overall measures of price change.

Previous indexes of volume and price in merchandise trade have been constrained by two factors. A significant proportion of Canadian imports and exports (36% of imports and 15% of exports) is recorded in terms of value only. No corresponding quantity information is tabulated because it is not available from the source documents or because the quantity units recorded cannot be aggregated to commodity class totals or else because the quantity units correspond to a highly heterogeneous mixture of products. It follows that the index numbers of physical volume cannot be calculated directly, but rather must be obtained indirectly by dividing indexes of current dollar values by price indexes. This constraint is still present and has important implications for the choices of elementary price relatives. A second constraint in the past was that hand methods did not permit a frequent recalculation of weights for each of the hundreds of price relatives used in the index. In the present version of the series, the second constraint no longer holds. The more intensive use of electronic data processing allows for far greater flexibility to experiment with alternative weighting systems.

**Note:** The vertical scale on all charts is logarithmic.

Ce document décrit les nouveaux indices de volume et de prix du commerce des marchandises. Publiés pour la première fois dans le numéro de juillet 1975 de *Sommaire du Commerce extérieur* (n° 65-001 au catalogue), ils diffèrent en plusieurs points importants de la série précédente. Leur période de référence n'est plus 1968, mais 1971, leurs indices élémentaires reflètent une sélection plus vaste et différente de l'ancienne et, contrairement à l'ancienne série, l'indice de prix est de type Paasche plutôt que Laspeyres.

Cet article se veut tout d'abord un guide technique pour les utilisateurs sur le mode d'établissement des indices, sur les critères de sélection des indicateurs de variation des prix et sur la disponibilité des séries historiques brutes ou corrigées de variations saisonnières. Il examine aussi les problèmes liés à l'emploi de valeurs unitaires plutôt que de prix de spécification et analyse les effets de différentes pondérations sur la mesure globale de la variation des prix.

Les anciens indices de volume et de prix du commerce des marchandises présentaient deux inconvénients. D'abord, comme une proportion appréciable des importations et des exportations canadiennes (36 % et 15 % respectivement) n'était enregistrée qu'en valeur, l'information correspondante sur la quantité manquait, soit parce qu'elle n'était pas donnée dans les documents de base, soit parce que les quantités ne pouvaient être agrégées dans des catégories de marchandises, ou recouvraient un ensemble de produits particulièrement hétérogène. L'indice de volume ne pouvait donc être calculé directement; il fallait diviser l'indice de valeur en dollar courants par l'indice de prix. Cette contrainte existe toujours et joue un rôle important dans le choix des prix relatifs élémentaires. L'autre inconvénient provenait de ce que la nécessité de calculer à la main les poids des centaines de prix relatifs inclus dans l'indice interdisait de répéter cette opération fréquemment. Ce problème a été réglé par l'emploi plus intensif de l'ordinateur, méthode plus souple qui permet d'étudier plusieurs possibilités de pondération.

**Nota:** Sur tous les graphiques, l'échelle verticale est logarithmique.

## PART – I – PARTIE

### Weighting Formulas Formules de pondération

#### Section 1. Price Indexes

Both the 1948 = 100 and the 1968 = 100 price index series were calculated using fixed weights which reflected commodity trade patterns in the reference year. This yielded the familiar Laspeyres index:

$$\frac{\sum P_i^t Q_i^0}{\sum P_i^0 Q_i^0} \quad (1)$$

where

$P_i^t$  is the current price in time period  $t$ ,

$P_i^0$  is the price in the base period, e.g., the average price for the year 1968,

$Q_i^0$  is the quantity in the base period, and  $\Sigma$  indicates the summation over all the commodities ( $i = 1, 2, \dots, n$ ) in the index.

(For simplicity, the “ $i$ ” subscript is not used in subsequent notation, but should be understood to be present.)

The form of (1) normally used for actual index calculation is the following:

$$\frac{\sum P^t Q^0}{\sum P^0 Q^0} = \frac{\sum \left( \frac{P^t}{P^0} \right) P^0 Q^0}{\sum P^0 Q^0} = \frac{\sum R^t W^0}{\sum W^0} \quad (2)$$

where

$R^t = \frac{P^t}{P^0}$  is the price relative

and

$W^0 = P^0 Q^0$  is the base period value.

Formula (2) has the advantage over formula (1) that a price index can be used instead of explicit prices. It also has the advantage that weights can be calculated using a value instead of a quantity where no physical measure of quantity is available.

The data processing system adopted for the calculation of the new (1971 = 100) index numbers permits the regular recalculation of the commodity weights. This, in turn, made it possible to calculate a moving-weighted index, of the Paasche type:

$$\frac{\sum P^t Q^t}{\sum P^0 Q^t} \quad (3)$$

#### Section 1. Indices de prix

Le calcul des indices de base 1948 = 100 et 1968 = 100 s'était effectué avec des poids fixes qui reflétaient les proportions du commerce des marchandises pendant les deux années de référence. On en tirait l'indice bien connu de Laspeyres:

où

$P_i^t$  le prix courant à la période  $t$ ,

$P_i^0$  le prix à la période de base, c'est-à-dire le prix moyen en 1968,

$Q_i^0$  la quantité à la période de base, et  $\Sigma$  qui indique la sommation sur toutes les marchandises ( $i = 1, 2, \dots, n$ ) de l'indice.

(Pour simplifier, nous avons éliminé le “ $i$ ” dans les formules suivantes, mais il y est implicitement présent.)

La forme de (1) employée habituellement pour calculer l'indice est la suivante:

où

$R^t = \frac{P^t}{P^0}$  est le prix relatif

et

$W^0 = P^0 Q^0$  la valeur à la période de base.

La formule (2) à l'avantage de remplacer le prix par l'indice de prix dans les calculs. De plus, on peut déterminer le poids à l'aide d'une valeur plutôt que d'une quantité lorsqu'on ne possède aucune mesure de cette dernière.

La méthode de traitement des données choisie pour calculer le nouvel indice (1971 = 100) rend possible la révision des poids des marchandises à intervalles réguliers et donc, le calcul de l'indice à pondération courante de Paasche:

The expression in (3) may also be transformed, as shown below, so as to use values as weights and price relatives rather than prices:

$$\frac{\sum P^t Q^t}{\sum P^0 Q^t} = \left( \frac{\sum \left( \frac{P^t}{P^0} \right)^{-1} P^t Q^t}{\sum P^t Q^t} \right)^{-1} \quad (4)$$

Unlike the Laspeyres index, this type of index reflects both changes in prices and changes in the weights attached to the price relatives. The consequences of this are explored in Part IV, Section 3. A method for decomposing changes in a Paasche price index into price and weight (quantity) change components is given in Appendix A.

## Section 2. Volume Indexes

As already noted in the Introduction, a significant proportion of Canadian imports and exports is recorded in terms of value only. Consequently a volume index must be calculated indirectly by dividing a value index by the corresponding price index. A volume index calculated in this way is said to be interdependent with the price index in that the change in their product is equal to the change in value. When only Laspeyres price indexes were available, the volume index was implicitly of the Paasche type as shown in algebraic terms below:

$$\frac{\sum P^t Q^t}{\sum P^0 Q^0} \div \frac{\sum P^t Q^0}{\sum P^0 Q^0} = \frac{\sum P^t Q^t}{\sum P^t Q^0} \quad (5)$$

The converse, that an implicit Laspeyres volume index results from division of the value index by a Paasche price index (3) also holds true:

$$\frac{\sum P^t Q^t}{\sum P^0 Q^0} \div \frac{\sum P^t Q^t}{\sum P^0 Q^t} = \frac{\sum P^0 Q^t}{\sum P^0 Q^0} \quad (6)$$

This is the form of volume index presently published.

Either of these combinations (Laspeyres price and Paasche volume or Paasche price and Laspeyres volume) preserves the property of interdependence whereas the other two possible combinations do not. From the two forms it is possible to calculate Fisher indexes, which are both symmetrical in weighting formulas and interdependent.

On peut transformer l'expression (3) de façon à remplacer les poids par les valeurs et les prix par des prix relatifs.

Contrairement à l'indice Laspeyres, ce genre d'indice reflète à la fois les variations des prix et celles des poids attribués aux prix relatifs. Nous examinerons les conséquences de cette propriété à la partie IV, section 3. Nous présenterons en outre dans l'appendice A une méthode de décomposition des variations de l'indice de prix Paasche en ses composantes de variations de prix et de poids (quantité).

## Section 2. Indices de volume

Comme nous l'avons déjà signalé, une proportion appréciable des exportations et des importations canadiennes n'est enregistrée qu'en valeur. Il faut calculer l'indice de volume indirectement, en divisant un indice de valeur par l'indice de prix correspondant. On dit alors que l'indice de volume et celui de prix sont interdépendants, c'est-à-dire que toute variation de leur produit est égale à la variation de la valeur. À l'époque où l'on ne disposait que d'indices de prix Laspeyres, l'indice de volume était implicitement du type Paasche, comme le démontre la formule ci-dessous.

La réciproque, que le quotient de l'indice de valeur par l'indice Paasche (3) résulte implicitement en un indice de volume Laspeyres, se vérifie également:

Les indices de volume sont actuellement publiés sous cette forme.

Ces deux combinaisons (indices Laspeyres pour les prix et Paasche pour le volume ou indices Paasche pour les prix et Laspeyres pour le volume) demeurent interdépendantes; ce qui n'est pas le cas pour les deux autres combinaisons possibles. Les indices Fisher, pourvus à la fois des propriétés de pondération symétrique et d'interdépendance, s'obtiennent des deux formes.

$$\sqrt{\frac{\sum P^t Q^0}{\sum P^0 Q^0} \times \frac{\sum P^t Q^t}{\sum P^0 Q^t}} \quad (7)$$

$$\sqrt{\frac{\sum P^0 Q^t}{\sum P^0 Q^0} \times \frac{\sum P^t Q^t}{\sum P^t Q^0}} \quad (8)$$

Formula (7) represents a Fisher price index and (8) a Fisher volume index. The product of the two is the value index:

La formule (7) donne un indice de prix Fisher et la formule (8) un indice de volume. Le produit des deux est un indice de valeur:

$$\sqrt{\left(\frac{\sum P^t Q^t}{\sum P^0 Q^0}\right)^2} = \frac{\sum P^t Q^t}{\sum P^0 Q^0} \quad (9)$$

In the System of National Accounts, changes in Gross National Product in real terms (i.e., the volume index of GNP) is calculated as a Laspeyres index. It follows that the implicit GNP deflator (current dollar GNP divided by constant dollar GNP) is a Paasche price index. Consequently, the indexes of exports and imports which are used in GNP statistics are of the Laspeyres volume and Paasche price type. External Trade price indexes are published in Paasche form in order to increase comparability between the price measures published in the *Summary of External Trade* and the corresponding measures published as implicit deflators of the trade series in the National Accounts.

Le Système de comptabilité nationale calcule en termes réels toute variation du produit national brut (c'est-à-dire l'indice de volume du P.N.B.) comme un indice Laspeyres. Le déflateur implicite du P.N.B. (le quotient du P.N.B. en dollars courants par le P.N.B. en dollars constants) est un indice de prix Paasche. Les indices d'importation et d'exportation des statistiques du P.N.B. sont donc des indices de volume Laspeyres et des indices de prix Paasche. Les indices de prix du commerce extérieur sont publiés sous la forme Paasche pour faciliter la comparaison avec les mesures de prix publiées dans le *Sommaire du commerce extérieur* et les mesures correspondantes données par les comptes nationaux comme déflateurs de la série du commerce.

## PART – II – PARTIE

### Measurement of Price Change

### Mesure de variation des prix

#### Section 1. Sources of Price Relatives

The Canadian import and export price indexes employ, as elementary indicators of price change, unit value indexes, calculated directly from the trade statistics, and specification price indexes from both Canadian and foreign sources.

Unit values are calculated by dividing the total value for a set of transactions by the total quantity for the same set. The individual transactions are, therefore, implicitly weighted by the size of the transaction to yield a weighted average or “unit value”.<sup>1</sup> The quantities and values for the individual transactions are derived from customs documents in the course of compiling commodity trade statistics.

“Specification prices” are prices quoted for a detailed commodity specification. The commodity specification is normally held constant over time with respect to physical description and terms of sale such as size of transaction, type of customer, and credit terms. If anything changes in the specification an attempt is made to evaluate the value of the change in order to apply an adjustment to the recorded price change. Specification prices are usually collected from a sample of respondents and consist of selected commodity items chosen by the respondent to represent price movement of the universe of transactions.

<sup>1</sup> A simplified illustration of the implicit weighting effect is given below:

|                 | Quantity   | Value    | Unit value<br>(value ÷ quantity)       |
|-----------------|------------|----------|--|
|                 | Quantité   | Valeur   | Valeur unitaire<br>(valeur ÷ quantité) |
|                 | cwt. – cwt |          | dollars                                |
| Transaction:    |            |          |  |
| 1 . . . . .     | 10         | 200.00   | 20.00                                  |
| 2 . . . . .     | 40         | 1,200.00 | 30.00                                  |
| Total . . . . . | 50         | 1,400.00 | 28.00                                  |

A simple or equal-weighted average of the prices of these two transactions would be \$25.00 = 1/2 (\$20.00 + \$30.00). The “unit value” gives a higher average price of \$28.00 because the two prices are weighted by the quantities involved in the two transactions.

#### Section 1. Sources de prix relatifs

Les indicateurs élémentaires de variation des prix utilisés dans les indices de prix canadiens à l'importation et à l'exportation sont des indices de valeurs unitaires, calculés directement à partir des statistiques du commerce et des indices de prix de spécification obtenus de sources canadiennes et étrangères.

On obtient les valeurs unitaires en divisant la valeur totale de l'ensemble des transactions par la quantité totale pour cet ensemble. Les transactions particulières sont implicitement pondérées par la taille de la transaction ce qui donne une moyenne pondérée, appelée “valeur unitaire”.<sup>1</sup> Les quantités et les valeurs des transactions proviennent de documents douaniers dépouillés lors de la préparation des statistiques du commerce.

Les “prix de spécification” sont les prix cotés pour une spécification détaillée de marchandises. La description physique et les conditions de vente, telles la taille de la transaction, le type de client, les modalités de crédit de la spécification ne varient pas avec le temps. Si un élément de la spécification est modifié, on essaie alors d'estimer la valeur de la variation afin de corriger la variation enregistrée du prix. Les prix de spécification s'obtiennent au moyen d'un échantillon de répondants à qui on demande de choisir des marchandises représentant le mouvement des prix dans l'univers des transactions. Les prix de spécification sont les prix des articles choisis.

<sup>1</sup> Voici un exemple simple de cette pondération implicite:

|                 | Quantity   | Value    | Unit value<br>(value ÷ quantity)       |
|-----------------|------------|----------|--|
|                 | Quantité   | Valeur   | Valeur unitaire<br>(valeur ÷ quantité) |
|                 | cwt. – cwt |          | dollars                                |
| Transaction:    |            |          |  |
| 1 . . . . .     | 10         | 200.00   | 20.00                                  |
| 2 . . . . .     | 40         | 1,200.00 | 30.00                                  |
| Total . . . . . | 50         | 1,400.00 | 28.00                                  |

La moyenne arithmétique des prix de ces transactions serait \$25.00 = 1/2 (\$20.00 + \$30.00). La “valeur unitaire” fournit le prix moyen plus élevé de \$28.00 parce que les deux prix sont pondérés par les quantités des transactions.

The main advantages of unit values are that they are readily available as a by-product from the compilation of commodity trade statistics and that they include all the transactions within the selected commodity class. They are, however, subject to possible bias resulting from changes in the composition of the set of transactions coded to the commodity class concerned. This bias will be more or less serious according to the degree of homogeneity in the commodity class over time. Although absolute prices of individual items may vary a good deal within a group of transactions, the implicit averaging process tends to cancel extreme values. Moreover, for many commodities the mix is unlikely to change substantially in the short term, since markets and production lines are not volatile over short periods. Over longer periods, unit values are more subject to error because long-term technical or market changes take place and require adjustment for quality change or changing composition.

For these reasons unit values are used for relatively homogeneous commodities such as primary and semi-manufactured goods, and specification prices, mainly in the form of wholesale prices, are used for heterogeneous commodities, particularly manufactured products ready for final use.

Most of the specification price indexes used for imports are taken from the U.S. Bureau of Labor Statistics (BLS) wholesale price indexes. This is a reasonable choice since the United States accounts for three quarters of total imports of the products concerned. A few Japanese and United Kingdom price indexes are also used where imports from these countries are significant. All non-Canadian price indexes which are used as proxies in this way are adjusted by the exchange rate in order to correspond to the valuation of the imports themselves.

For exports, most specification price indexes for End Products are derived from Canadian Industrial Selling Price Indexes (ISPI).

The use of wholesale price indexes or their equivalent as proxies for import or export prices is likely to introduce a bias for two reasons. The first is that the price representation in terms of firms and commodity items may be significantly different, as between the domestic market and the external market. The second is that price movement may differ, as between the domestic and external markets due to different competitive conditions and market and tax structures.

The main advantage of specification price indexes is that the specification is controlled and, therefore, the index reflects pure price effects only. Specification prices must be controlled so as to ensure that the measure reflects real transactions rather than

Les valeurs unitaires ont comme principal avantage de pouvoir s'obtenir automatiquement du rassemblement des statistiques du commerce des marchandises et de pouvoir englober toutes les transactions de la classe de marchandises choisie. Elles peuvent cependant être biaisées par les variations de composition de l'ensemble des transactions représentant la classe de marchandises étudiée. L'importance du biais dépend du degré d'homogénéité de la classe dans le temps. Quoique les prix absolus d'articles puissent varier considérablement à l'intérieur d'un groupe de transactions, la moyenne implicitement comprise dans le procédé de calcul tend à éliminer les valeurs extrêmes. Dans plusieurs cas en outre, la combinaison ne se modifie probablement pas beaucoup à court terme, car les marchés et les chaînes de production sont stables sur de courtes périodes. À long terme, les chances d'erreur deviennent plus grandes parce que les variations de qualité ou de composition causées par les changements techniques et économiques nécessitent des rectifications.

Les valeurs unitaires sont donc utilisées surtout pour des marchandises assez homogènes comme les produits primaires et semi-manufacturés et les prix de spécification, donnés sous forme de prix de gros surtout, pour les marchandises hétérogènes, en particulier les produits manufacturés destinés à la consommation.

La plupart des indices de prix de spécification des importations sont tirés des indices de prix de gros du U.S. Bureau of Labor Statistics (BLS). C'est un choix raisonnable, car trois-quarts des importations viennent des États-Unis. Si les importations en provenance du Japon et du Royaume-Uni sont suffisamment importantes, on utilise quelques indices de ces pays. Tous les indices étrangers qui servent de substituts sont rectifiés en fonction du taux d'échange pour correspondre à l'évaluation des importations.

La plupart des indices de prix de spécification pour les produits finis à l'exportation sont obtenus à partir des indices des prix de vente dans l'industrie (I.P.V.I.).

L'emploi d'indices de prix de gros ou de leurs équivalents comme substituts des prix à l'importation ou à l'exportation risque de biaiser les résultats pour deux raisons. D'abord, parce que la représentation des prix selon les sociétés et les marchandises peut varier de façon marquée comme c'est le cas pour les marchés intérieur et extérieur; ensuite parce que le mouvement des prix varie à cause de différences au niveau de la concurrence, de la structure du marché ou du régime fiscal.

Les indices de prix de spécification ont l'avantage de ne refléter que la répercussion des prix puisque la spécification est contrôlée. Cette surveillance est nécessaire pour assurer que la mesure correspond aux transactions réelles et non un tarif. L'étude effectuée par le

list prices. Research by the Stigler Committee<sup>2</sup> showed that for the limited sample of commodities they examined, downward price trends in a period of recession were not reflected in the wholesale price index because they did not adequately reflect unrecorded introductory offers, tie-in sales, shipping concessions and quantity discounts.

Because of the cost disadvantage most countries base their trade price indexes on unit value prices alone. Major exceptions are the Federal Republic of Germany and Japan, where both types of indexes are computed. The United States compiles, in addition to unit value indexes, specification price indexes, which account for about one third of the value of United States exports but only 14% of United States imports. The relative export and import coverage figures are to a certain extent a measure of the relative difficulty of using specification prices to measure price changes in imports. In general, the import universe is more fragmented in terms of products and sources than the export universe.

## Section 2. Price Relatives Based on Unit Values

In general the selection of unit values to represent particular areas of trade took place at the Trade of Canada Commodity Classification (TCCC) five-digit class level. The main criteria for selection were:

- (i) Importance of the class: generally classes with a share of total trade greater than 0.05% were selected; and
- (ii) evidence that changes in the unit value primarily reflect price changes.

If a commodity is homogeneous a unit value index will provide a good indicator of price movement. (With complete homogeneity, the unit value and specification price would be identical.) The degree of homogeneity can be tested using statistical methods. If a class is homogeneous over time, the variance of transaction prices within the class should be small and the coefficient of variation should be stable over time. The variance of monthly unit values should be predictable within a reasonable tolerance on the basis of previous data. Further the variance between means for sub-categories such as a country or port/tariff breakdown within a class should be small and stable over time.

In practice, price movements and the variances of unit values were looked at by graphing monthly unit

comité Stigler<sup>2</sup> sur un échantillon restreint de marchandises montré que l'indice des prix de gros ne reflétait pas les tendances à la baisse des prix pendant une récession parce qu'il ne tenait pas suffisamment compte des offres de lancement, des ventes à condition et des réductions sur la quantité.

La plupart des pays préfèrent calculer leurs indices de prix du commerce à partir des seules valeurs unitaires, à cause du problème du coût. La République fédérale d'Allemagne et le Japon font exception: ces pays calculent les deux genres d'indices. Les États-Unis utilisent, outre les indices de valeurs unitaires, ceux des prix de spécification; ces derniers couvrent environ un tiers des exportations américaines, mais seulement 14 % des importations. Les taux de couverture des importations et des exportations permettent jusqu'à un certain point de mesurer la difficulté d'utiliser des prix de spécification pour évaluer les variations des prix à l'importation. L'univers des importations est, en règle générale, beaucoup plus parcellaire que celui des exportations du point de vue des produits et des sources.

## Section 2. Prix relatifs dérivés des valeurs unitaires

La sélection des valeurs unitaires représentant un secteur du commerce donné a généralement eu lieu au niveau de détail à cinq chiffres de la classification canadienne du commerce des marchandises (C.C.C.M.), selon les critères suivants:

- (i) L'importance de la classe: habituellement, toute classe dont la part du commerce dépassait 0.05 % était incluse, et
- (ii) l'existence de preuves démontrant que la valeur unitaire reflète surtout les variations de prix.

L'indice des valeurs unitaires est un bon indicateur des mouvements des prix quand la catégorie est homogène (si l'homogénéité était totale, la valeur unitaire et le prix de spécification seraient égaux). Il est possible de tester statistiquement le degré d'homogénéité. Si une classe est homogène dans le temps, la variance des prix des transactions à l'intérieur de la classe et le coefficient de variation seront stables par rapport au temps. Il sera dans une certaine mesure possible de prédire les valeurs unitaires mensuelles à l'aide des données précédentes. De plus, la variance des moyennes des sous-catégories, comme la décomposition d'une classe par pays ou par bureau de douane, sera petite et stable par rapport au temps.

En pratique, on étudiait les mouvements et les variances des valeurs unitaires en traçant chaque mois,

<sup>2</sup> U.S. Congress, Joint Economic Committee, Government Price Statistics, Hearings, 87th Congress, 1st Session, Part 2, January 24, 1961 (Washington, D.C.: Government Printing Office, 1961). Publié aussi sous le titre *Price Statistics of the Federal Government* (New York: National Bureau of Economic Research, 1961).

values over a period of years including the latest available data for countries within commodity classes and for related commodities. These comparisons frequently showed that whilst there might be month-to-month changes that were imperfectly correlated among classes, the general price trend was parallel for countries within the commodity and/or for similar commodities. For example, lumber prices for different types of wood and for different products made from the same wood, such as cedar lumber and cedar shakes, followed the same trends. Copper ores showed the same trend as copper scrap and copper refinery shapes. Grain exports to different countries showed the same trends.

The basis for the selection process described above was strengthened by independent studies in which classes were distinguished by the ease with which their mean unit values could be predicted for transaction record editing purposes. There was a close correspondence between classes with successfully predicted means and classes selected as price indicators. Further strengthening of the selection basis was provided by a comparison of 12 unit values with corresponding specification prices where export specification prices were available. The correlation between the two series of price relatives was in all cases greater than 0.9.

Since the price indexes are current weighted, the representativeness of selected price indicators is reviewed annually. Representativeness is also monitored on a monthly basis. If any commodities which were not originally selected grow in importance enough to warrant representation, they are included, provided that suitable price indicators can be found. A recent example occurred with imports of pork which were relatively insignificant in the period January 1971 to mid-1974. Since 1974, however, they have grown substantially and prices have tended to increase faster than beef prices, the other main component of the fresh meat import index. Pork has now been incorporated into the index.

The commodity classifications are revised once a year. If the revisions affect any priced lines, adjustments are made on the basis that in the link period, the aggregate index should not be affected by the change. This is achieved by recalculating the base price so as to maintain an unchanged level. For example, in 1975 the export class for whisky was split into "Whisky in bulk" and "Other whisky". Since there was no overlap between the old class and the two new classes between December 1974 and January 1975, it was assumed that no price change had occurred between December and January. New base prices were calculated for the two new classes so that the December 1974 level of the old index was maintained in January 1975. Thereafter, the whisky index incorporates the weighted average of the

pendant un certain nombre d'années, le graphique des valeurs; on incluait les données les plus récentes sur chaque pays à l'intérieur d'une classe de marchandises, et sur les marchandises semblables. Ces comparaisons démontraient fréquemment que, quoiqu'il puisse exister des variations mensuelles imparfaitement corrélées parmi les classes, la tendance générale des prix pour les pays à l'intérieur d'une classe était parallèle à celle des prix pour les marchandises semblables. Ainsi les tendances des prix du bois d'oeuvre pour différents bois et différents produits tirés du même bois, comme le bois d'oeuvre en cèdre et les bardeaux de cèdre, étaient les mêmes. Il en était de même pour les minerais de cuivre, les déchets de cuivre et les profils d'affinage de cuivre, ou pour les exportations de grains à différents pays.

La justesse de la base du procédé de sélection décrit plus haut a été confirmée par des études indépendantes. On avait groupé les classes en fonction de la facilité avec laquelle on pouvait prédire leurs valeurs unitaires moyennes pour fins de correction des dossiers des transactions. Il en est ressorti une étroite correspondance entre les classes dont on pouvait facilement prédire la moyenne et celles qui avaient été choisies comme indicateurs des prix. La comparaison des 12 valeurs unitaires avec les prix de spécification correspondants, quand ces prix à l'exportation étaient disponibles, a aussi confirmé la justesse de la base de sélection. Dans tous les cas, la corrélation entre les deux séries de prix relatifs dépassait 0.9.

Comme la pondération des indices de prix est de type courant, il faut réviser annuellement les indicateurs des prix pour s'assurer de leur représentativité. Cette représentativité est également contrôlée mensuellement. Si une marchandise qui n'appartenait pas au panier initial acquiert une importance suffisante pour justifier sa représentation, elle est incluse dans le panier, pourvu qu'on puisse obtenir des indicateurs de prix convenables. Ainsi, les importations de porcs, qui n'avaient guère d'importance dans la période allant de janvier 1971 au milieu de 1974, se sont accrues considérablement et les prix ont eu tendance à monter plus vite que ceux du boeuf, l'autre grande composante de l'indice à l'importation de la viande fraîche. On a donc inclus le porc dans l'indice.

La classification des marchandises est revue une fois l'an. S'il y a des corrections à effectuer pour l'une quelconque des variétés, elles sont faites selon le principe que l'indice agrégé pour la période intermédiaire ne doit pas être modifié par le changement. On recalcule donc le prix de base de façon à conserver le même niveau. Ainsi, en 1975 on a divisé la classe d'exportation pour le whisky en "whisky en vrac" et "autre whisky". Comme il n'y a eu aucun recouvrement de l'ancienne classe par les deux nouvelles classes entre décembre 1974 et janvier 1975, on a supposé que les prix n'avaient pas varié entre décembre et janvier. On a établi les nouveaux prix de base de telle sorte que le niveau de l'ancien indice en janvier 1975 reste le même qu'en décembre 1974. L'indice du whisky est maintenant une combinaison de la moyenne pondérée des

price movement of the two new classes. If a change in the selection of priced lines is due to the fact that a new commodity has become important, the index will be revised back to the period where a significant difference will be made to the aggregate indexes.

Three quarters of imports and nearly 90% of exports are covered at the class level. In the case of imports two thirds of the representation is by proxy specification price indexes compared with a third for exports. It should also be noted that the weight of End Products, Inedible, is nearly two-thirds in the case of imports compared with just over a third for exports.

mouvements des prix des deux nouvelles classes. Si la sélection des variétés est modifiée parce qu'une marchandise gagne en importance, on corrigera l'indice pour la période où les indices agrégés auraient été modifiés de façon appréciable si la variété avait fait partie du panier.

Les classes choisies pour les indices recouvrent trois-quarts des importations et presque 90 % des exportations. Les indices des prix de spécification représentent deux tiers des importations, mais seulement un tiers des exportations. Signalons également que le poids de "Produits finis, non comestibles" vaut presque deux tiers pour les importations et à peine plus de un tiers pour les exportations.

<sup>1</sup> The primary level for calculation of unit values or proxy indexes is the five-digit TCCC class. "Commodity coverage" in this table is, therefore, calculated as the proportion of total 1971 trade value represented by classes for which a unit value index or proxy specification price index is employed. In some cases unit values are calculated for an incomplete set of class components, but in these cases, the components usually account for over 80% of the class. — Le premier niveau de calcul des indices de valeurs unitaires et des "substituts" est le niveau de détail à cinq chiffres de la CCCM. La "couverture des marchandises" dans cette table est donc la proportion de la valeur totale du commerce de 1971 que représentent les classes pour lesquelles on a établi un indice de valeurs unitaires ou de prix de spécification. Il arrive qu'on doive établir les valeurs unitaires d'un ensemble incomplet d'éléments d'une classe, mais dans la plupart de ces cas, les éléments recouvrent plus de 80 % de la classe.

### Section 3. Illustration of Principles for Selecting Unit Values

The following charts illustrate the principles which were used to select unit values in the rebasing of the trade price indexes from 1968 to 1971. As explained in Part II, Section 2, commodity classes were selected, based on their importance and on the basis of homogeneity of the product content of the commodity class over time. Homogeneity was assessed inferentially on the basis of a comparison of trends of unit value movements between similar commodities and/or between countries for the same commodity or between ports of entry/exit or tariff lines within the same commodity/country combination. The basic premise of this method of evaluation of homogeneity is that if a commodity is homogeneous then the comparisons enumerated above should yield similar unit value trends.

The following examples drawn from all areas of the commodity classification, apart from End Products, illustrate the kinds of comparison made and indicate the degree of variation to be expected. In general the correlations between series of related or component unit values are reasonably good. Other broad principles which have emerged with the experience gained in this approach are that in general the larger the volume of shipments the more smooth and consistent price trends are likely to be. Secondly, when obvious outliers occur, they are often associated with abnormally low shipments or with processing errors. In the latter case the errors can be traced and adjusted for. It should be noted that unit value outliers associated with low shipments have relatively little impact in a current-weighted price index because of their correspondingly low weight. Again as previously explained in a few rare instances obvious outliers may be edited in order to fit the trend if a logical explanation cannot be adduced for an abnormally high or low value.

Brief comments relating to particular commodity charts are given below:

#### Chart

1. Trends are closely correlated for fresh or chilled beef and frozen beef, apart from April and May 1975.
2. Considerable fluctuations about a definite trend are discernible for ham and pork. This leads to another general comment on unit value indexes. Individual disaggregated unit values may be subject to considerable monthly fluctuations. When these are aggregated, cancellation of fluctuations is likely to take place and a more clearly defined trend usually results.

### Section 3. Exemples illustrant les principes de sélection des valeurs unitaires

Les graphiques donnés ci-dessous illustrent les principes qui ont servi à choisir les valeurs unitaires, lors de la refonte des indices des prix du commerce, de la base 1968 à 1971. Comme nous l'avons déjà expliqué à la partie II, section 2, le choix des classes de marchandises s'est fait en fonction de leur importance et de l'homogénéité dans le temps des produits inclus dans la classe. Cette homogénéité a été évaluée par inférence en se fondant sur une comparaison entre les tendances des mouvements des valeurs unitaires de marchandises semblables, de différents pays pour la même marchandise, ou encore de différents ports de douane ou numéros tarifaires pour la même combinaison de marchandises et de pays. Cette méthode d'évaluation de l'homogénéité suppose que si une marchandise est homogène, les tendances des valeurs unitaires qu'on obtiendra des comparaisons énumérées ci-dessus seront semblables.

Les exemples suivants, tirés de tous les secteurs de la classification des marchandises à l'exception des produits finis, illustrent le genre de comparaison qu'on effectue et donnent le degré de variation auquel on peut s'attendre. De façon générale, les corrélations entre les séries de valeurs unitaires reliées ou constitutives sont bonnes. L'expérience acquise a aussi permis de conclure que plus le volume des expéditions est grand, plus la probabilité que les tendances des prix soient lisses et cohérentes est forte et que les valeurs extrêmes sont souvent associées à des expéditions particulièrement petites ou à des erreurs de traitement. S'il s'agit d'une erreur, on peut la retrouver et la corriger. Remarquons que les valeurs unitaires extrêmes reliées aux petites expéditions n'ont pas beaucoup d'importance dans un indice à pondération courante à cause de leur poids très faible. Enfin, comme nous l'avons déjà mentionné, il arrivera parfois qu'on corrige certaines valeurs extrêmes très marquées de façon à les aligner sur la tendance s'il n'est pas possible de les expliquer de façon logique.

Quelques remarques sur certains de ces graphiques suivent.

#### Graphique

1. Les tendances du boeuf frais ou réfrigéré et du boeuf congelé sont étroitement corrélées, sauf entre avril et mai 1975.
2. On remarque des fluctuations considérables autour d'une tendance bien marquée pour le jambon et le porc. On peut en tirer une conclusion assez générale sur les indices de valeurs unitaires. Il arrive que des valeurs isolées soient soumises à des fluctuations mensuelles importantes. Une fois ces valeurs agrégées cependant, les fluctuations s'annulent généralement et une tendance mieux définie apparaît.

The cancellation process is further enhanced by increasing the unit of time to a quarterly frequency instead of a monthly frequency. It should also be noted that many of these apparently random fluctuations may represent genuine price movements. This can be confirmed by referring to price charts for commodities traded in a commodity exchange. Considerable fluctuations occur even on a daily basis.

3. The three price lines for cod show considerable fluctuations about a discernible trend. The same turning point at the end of 1973 is followed by all three series.

4. The price lines for three different forms of iron ore show the same trend. Unusually low unit values for concentrated iron ore are associated with very low volumes in April 1972, October 1973 and January and February 1975.

5, 6, 7 and 9. Well defined trends for copper, nickel, asbestos and spruce are clearly discernible.

8. This shows a more complex relationship in trend between a raw material and a product manufactured largely from the same raw material. As would be expected the raw material was the first to reflect the strong upswing in prices which started in the last few months of 1972. The corresponding surge in prices for the product manufactured from the raw material occurred about six months later. Starting in mid-1974 the reverse situation appears to have taken place. Plywood price increases preceded those for the raw material.

10. This chart also shows an interesting relationship between the raw material and in this case two products derived from the raw material, cedar shingles and cedar shakes. The trends for the two derived products correspond closely to each other but diverge from the raw material in mid-1973 probably because of a weaker market. The trends for all three cedar products coalesce again from the beginning of 1975.

11 and 12. The six wood pulp unit value lines have similar trends and the largest class 340 - 21 has the smoothest trend.

L'allongement de l'unité temporelle mesure du mois au trimestre accélère encore le processus. Remarquons cependant que ces fluctuations, en apparence aléatoires, peuvent représenter des mouvements de prix réels. On peut le vérifier en consultant les graphiques de prix des marchandises d'une bourse de commerce. Les fluctuations, même journalières, sont considérables.

3. Les trois variétés de la morue fluctuent de façon marquée autour d'une tendance déterminée. Le même renversement s'est produit pour les trois séries vers la fin de 1973.

4. Les variétés des trois types de minerai de fer ont la même tendance. Les valeurs unitaires particulièrement basses qui ont été notées pour le minerai de fer sont associées au volume très bas d'avril 1972, octobre 1973 et janvier et février 1975.

5, 6, 7 et 9. On remarque des tendances bien définies pour le cuivre, le nickel, l'amiante et l'épinette.

8. Ce graphique illustre un rapport plus complexe entre les tendances d'une matière première et d'un demi-produit fait principalement de la même matière. Comme on pouvait s'y attendre, la matière première a d'abord rendu compte de la forte hausse des prix qui s'est faite sentir à partir de la fin de 1972. La hausse correspondante du prix du demi-produit est arrivée environ six mois plus tard. À partir de la deuxième moitié de 1974 l'inverse semble s'être produit. La hausse de prix des contre-plaqués a précédé celle de la matière première.

10. Ce graphique illustre un lien intéressant entre une matière première et, ici, deux produits obtenus de cette matière, les bardeaux de cèdre et les bardeaux pour façade de même bois. Les tendances des deux produits se suivent étroitement mais s'éloignent de celle de la matière première vers le milieu de 1973, sans doute à cause d'un fléchissement du marché. Les tendances des trois produits se regroupent à partir de 1975.

11 et 12. Les valeurs unitaires des six variétés de pâte de bois ont des tendances semblables et la classe 340 - 21 la plus grande possède la tendance la plus lisse.

13. The newsprint chart is a good example of unit values based on large volumes having the smoothest trend, e.g., the United States line, and the smaller volumes have the more erratic movement, e.g., Australia.
  14. This chart illustrates how trends are well correlated for commodities having different descriptions but which are related in content and use.
  - 15 and 16. These illustrate the situation where a contract price set for a period of months exhibits a horizontal trend and then suddenly catches up in a single period. This situation may apply at the same time as unit values for other countries are responding to current market forces as is the case for both these commodity charts. In addition the movement of the unit value for the People's Republic of China (Chart 16) also reflects the imputation of the previous month's unit value when no shipments are made.
  - 17 - 24. These are further examples of similar trends exhibited by similar commodities or by countries within a commodity. Chart 21 gives a rather astonishing example of apparently disparate commodities — nuts, bolts, screws and washers on the one hand and wire nails, on the other, which presumably because of a common raw material, exhibit a good correlation in overall trend.
13. Le graphique pour le papier-journal démontre le fait que les valeurs, unitaires basées sur les volumes importants ont les tendances le plus lisses, comme c'est le cas pour la courbe des États-Unis, et celles qui sont basées sur de petits volumes, des mouvements plus irréguliers, comme la courbe de l'Australie.
  14. Ce graphique montre que les tendances de marchandises de descriptions différentes mais d'usage et de contenu semblables sont bien corrélées.
  - 15 et 16. Ceux-ci illustrent le cas d'un prix fixé par contrat pour un certain nombre de mois qui, pendant ce temps, conserve une tendance horizontale, puis monte brusquement, en une seule période. Cela peut se produire à plusieurs endroits à la fois car les valeurs unitaires d'autres pays réagissent aux forces du marché, comme c'est le cas dans ces deux graphiques. Le mouvement de la valeur unitaire de la République populaire de Chine (graphique 16) reflète aussi l'évaluation hypothétique du mois précédent, alors qu'il n'y avait pas eu d'expédition.
  - 17 - 24. Il s'agit d'autres exemples de tendances semblables pour des marchandises semblables ou pour un pays à l'intérieur d'une classe. Le graphique 21 présente un exemple assez étonnant de marchandises en apparence disparates — écrous, boulons et rondelles d'une part, clous d'autre part qui, parce que fabriqués à partir d'une même matière, ont des tendances globales bien corrélées.

#### Section 4. Automotive Products Prices

Automotive indexes have been singled out for separate comment because of their importance and because of the difficulty and at the same time the necessity of quality adjustments associated with them. The automotive area, including passenger cars, trucks and parts, is the largest component in both import and export indexes and accounted for 23.4% of total imports and 19.4% of exports, respectively, during the year 1975. Passenger automobiles accounted for 7.3% of total imports and 9.2% of exports during the same period.

Initially, the 1968-based price index used Industrial Selling Price Indexes (ISPI's) as proxies for export prices and U.S. Bureau of Labor Statistics (BLS) wholesale price indexes (adjusted by the exchange rate) as proxies for import prices. From 1972, the automobile and truck components were based on prices for the basic car/truck, excluding options, received on customs declarations, a selection of car/trucks having been made to represent 1971 trade patterns. The car indexes were adjusted for quality change at the total level using the ISPI quality change factor. Automobile parts continued to be priced using the ISPI and U.S. BLS proxies.

In the course of a review of sources for the construction of the new indexes, it was found that the quality change adjustments made for the ISPI could not be adequately linked to the prices and specifications for vehicles recorded on customs returns. In view of the importance and the extent of quality change adjustments applied to the ISPI vehicle indexes, it was decided to use the ISPI indexes, supplemented by Consumer Price Index Series in the case of imports of foreign cars, as proxies for the vehicle components of the trade indexes. A study is being conducted to determine the possibility of applying quality adjustments derived from multivariate regressions to the trade transaction prices furnished on customs documents. So far it has shown promising results in terms of the extent of variability of car prices explained by independent variables such as weight, engine size, interior and exterior dimensions. Equations have been specified for three size categories for the three main automobile manufacturers and also for station wagons as a separate category. But because of data limitations, quality adjustment factors have only been computed for one car company for the change between the 1974 and 1975 model years. With the data which are now available for 1976 models, it should be possible to calculate quality-change-adjusted indexes for all three main manufacturers. This may allow a return to the use of customs documents for the calculation of automobile trade price indexes during 1977.

#### Section 4. Prix des produits de l'industrie automobile

Les indices de l'industrie automobile méritent un traitement particulier du fait de leur importance et du problème posé par les corrections difficiles mais nécessaires causées par les variations de qualité de ces produits. Si on inclut les voitures particulières, les camions et les pièces, le secteur de l'automobile est la principale composante des indices à l'importation et à l'exportation; il représente 23.4 % des importations et 19.4 % des exportations en 1975. Les voitures particulières constituent 7.3 % des importations totales et 9.2 % des exportations de la même année.

À l'origine, l'indice de prix base 1968 utilisait les indices de prix de vente dans l'industrie (I.P.V.I.) comme substituts pour les prix à l'exportation et les indices de prix de gros du U.S. Bureau of Labor Statistics (BLS), rectifiés selon le taux de change, pour les prix à l'importation. À partir de 1972, les indices de voiture et de camions ont été basés sur les prix de la voiture ou du camion, en excluant les accessoires optionnels, qui avaient été déclarés à la douane. On avait établi une liste de voitures et de camions représentant les tendances du commerce automobile en 1971. Les indices des voitures ont été rectifiés de façon globale en fonction des variations qualitatives, à l'aide du coefficient de variation de qualité de l'I.P.V.I. On a continué de déterminer les prix des pièces à l'aide des substituts obtenus de l'I.P.V.I. et du U.S. BLS.

Pendant la révision des sources effectuée lors de l'établissement des nouveaux indices, on a découvert qu'il était impossible de relier les corrections faites aux I.P.V.I. en raison de variations qualitatives, les prix et les spécifications des véhicules enregistrés dans les documents douaniers. Comme ces corrections étaient importantes et nombreuses, on a décidé d'utiliser les I.P.V.I., conjointement avec la série d'indices de prix à la consommation pour les importations de marques étrangères, comme substituts pour les indices de véhicules à l'importation. On étudie actuellement la possibilité d'effectuer des corrections qualitatives, obtenues à l'aide de régressions multiples, sur les prix des transactions fournis par les documents douaniers. Jusqu'à présent, les résultats sur la capacité d'expliquer la variabilité des prix des voitures par des variables indépendantes comme le poids, la taille du moteur, les dimensions intérieures et extérieures sont encourageants. On a établi les équations pour trois catégories de taille et une catégorie de modèle, les familiales, pour les trois fabricants principaux d'automobiles. Le manque de données n'a permis de calculer les coefficients de correction des variations qualitatives pour le changement de modèles de 1974 à 1975 que pour une compagnie. À l'aide des données sur les modèles de 1976, on pourra calculer les indices corrigés des variations qualitatives pour les trois grands fabricants. Il pourrait être possible de renouer pendant 1977 avec la tradition d'utiliser les documents douaniers pour établir les indices des prix du commerce automobile.

The decision to use the ISPI and Canadian Consumer Price Index for imports instead of reverting to the U.S. BLS index adjusted for the exchange rate was governed by the fact that the concept adopted for the price index of using current weights could not be applied at the country, company or model level in the case of the U.S. BLS. The use of the ISPI as a pricing source provides the opportunity for selecting models to represent imports and exports with appropriate current month weights. At present the ISPI is used as an aggregate index for both imports and exports and the selection of appropriate models to represent imports and exports with current weights is under development.

## Section 5. Editing and Revisions

Prices are checked to see whether any obvious anomalies seem to have affected the measure of change. The review process includes a visual scanning of monthly unit values for prices which deviate from established trends and which are inconsistent with price movements reported in the press and trade journals. Signals are also included on the current month's computer printout which identify excessive percentage price changes from the previous month. In some cases, prices which are apparently out of line can be traced to delayed shipments of goods at prices much lower than the prevailing market prices. In these cases, the price is accepted, since the primary purpose of the price indexes is the deflation of values in order to derive the real volume shipped.

In general, unit values tend to lag behind market prices to a variable extent depending on the commodity, because of the influence of contract prices which apply for a period of time rather than at a point in time. Occasionally, processing errors which have slipped through the intensive audit system used in the compilation of the commodity value and quantity statistics are identified and corrected.

In other cases a unit value may be completely out of line with no apparent explanation or corroborating evidence. In this case the previous month's unit value may be carried pending further confirmation. This kind of editing is kept to an absolute minimum since it is believed that the unit value series should reflect their inherent variability so that users can be aware of the extent of this variability and can make their own allowances for it. As a result of this variability month-to-month movements in unit values at a detailed commodity level must be treated cautiously. On a quarterly basis and at higher levels of aggregation they are generally more reliable, since irregular movements in either direction tend to balance out.

The other situation which arises is that there may be no unit value for a priced line in a particular month

On a choisi de se servir des indices canadiens des prix à la consommation et des I.P.V.I. pour les importations plutôt que de ceux du *U.S. BLS* corrigés en fonction du taux de change parce qu'il était impossible d'utiliser des poids courants dans l'indice de prix à l'échelle du pays, de la compagnie ou du modèle avec les données *U.S. BLS*. L'emploi des I.P.V.I. comme source de prix permet de choisir les modèles à pondération courante mensuelle appropriés pour représenter les importations et les exportations. Pour l'instant les I.P.V.I. sont utilisés comme indices agrégés tant pour les importations que pour les exportations et le choix des modèles à pondération mensuelle courante susceptibles de les représenter est à l'étude.

## Section 5. Corrections et révisions

On vérifie les prix pour s'assurer qu'aucune anomalie évidente ne semble avoir affecté la mesure des variations. L'examen consiste en un examen visuel des valeurs unitaires mensuelles qui s'écartent des tendances définies et qui ne correspondent pas aux mouvements des prix donnés par la presse et les revues spécialisées. L'impression mensuelle de l'ordinateur comprend des signaux qui indiquent les variations excessives des prix en pourcentage depuis le mois précédent. Il arrive qu'on puisse justifier une variation irrégulière par une expédition tardive dont les prix sont beaucoup plus bas que ceux du marché. Si c'est le cas, on accepte le prix puisque le but principal des indices des prix est d'obtenir le volume réel des expéditions par déflation des valeurs.

En règle générale, les valeurs unitaires accusent un certain retard sur les prix courants, dont le degré dépend de la marchandise, à cause du rôle des prix établis par contrat, qui s'appliquent pour une durée plutôt qu'à un moment donné. Des erreurs de programmation qui se sont glissées dans le système de vérification utilisé pour le rassemblement des valeurs des marchandises et des statistiques sont parfois repérées et corrigées.

Il arrive aussi qu'une valeur unitaire soit tout à fait irrégulière sans raison apparente et sans preuves à l'appui. On peut alors conserver la valeur du mois précédent, sous réserve de confirmation ultérieure. On essaie de limiter le plus possible ce genre de correction car la série des valeurs unitaires devrait refléter la variabilité inhérente de ces chiffres de sorte que les utilisateurs puissent en être bien conscients et en tenir compte comme il leur convient. On doit donc se servir prudemment des données mensuelles sur les mouvements des valeurs unitaires au niveau des marchandises. Les chiffres trimestriels à un niveau d'agrégation plus poussé sont en règle générale plus fiables, puisque les mouvements irréguliers dans un sens ou dans l'autre tendent à s'annuler.

Il peut aussi n'exister aucune valeur unitaire pour une variété à une période (mois ou trimestre) donnée. On

or quarter. For the current-weighted price index the price is treated as zero, unless all other priced lines at that aggregation level are zero. If all other priced lines at that aggregation level are zero the previous month's prices are imputed and given equal weights on the assumption that they represent a set of commodities where shipments have occurred even though none of the priced items have any shipments. The situation where a unit value is zero for a particular month and is treated as such can lead to apparently large changes in the resulting index if the components of the index are at widely differing price levels. This also happens where substantial weight shifts occur together with widely differing price levels, a zero weight simply being the case at the limit. This situation occurred with imported sugar in the first few months of 1975. Crude sugar was at a much higher level than processed sugar products and a significant shift in weights between the two items occurred.

In the case of the Laspeyres price index when a unit value is zero the previous month's price is imputed.

In common with the policy on revisions of value data, indexes for the current year may be revised at any time during the year. Once a year, generally in April, revisions may be made to indexes for the three previous years.

considère le prix comme étant zéro si l'indice est celui des prix à pondération courante. Si les prix de toutes les variétés à ce niveau d'agrégation sont zéro, on attribue aux variétés les prix du mois précédent et on leur donne des poids égaux en supposant que des expéditions des marchandises représentées par ces variétés ont eu lieu. Lorsqu'une valeur unitaire est zéro pour un mois donné et est traitée comme telle, l'indice obtenu peut sembler avoir varié considérablement si les composantes sont à des niveaux de prix très différents. La même chose se produit lorsqu'une modification marquée des poids a lieu quand les prix sont à un niveau très différent, le poids zéro étant tout simplement le cas limite. Les importations de sucre pour les premiers mois de 1975 en sont un exemple. Le sucre brut était à un niveau beaucoup plus élevé que les produits raffinés et on a procédé à une modification appréciable des poids des deux postes.

Si l'indice de prix est du type Laspeyres, une valeur unitaire nulle est remplacée par la valeur du mois précédent.

Les indices, tout comme les données sur les valeurs, peuvent être révisés n'importe quand pendant l'année. Une fois l'an, en avril d'habitude, on révisé les indices des trois années précédentes.

## PART – III – PARTIE

### Supplementary Notes Remarques supplémentaires

#### Section 1. Weighting System

The weights for the price components of the Paasche price index are derived in hierarchical fashion, the weight at any one level of aggregation being apportioned between those components with price representation in proportion to the relative quantities shipped in the particular month, quarter or year concerned. Items without price representation are, therefore, implicitly assumed to have the same price movement as priced items. With minor exceptions the levels of the hierarchy in descending order are normally:

Total

Section – Sections I to V of the Trade of Canada Commodity Classification (TCCC).

Major group – Usually a combination of Summary of External Trade Commodity Categories.

Sub-group – Usually an individual Summary of External Trade Commodity Category.

Class – TCCC five-digit level.

Country.

Port/tariff – Where applicable.

The Laspeyres price index weights were calculated on the same basis except that TCCC two-digit divisions<sup>3</sup> were used instead of major groups and TCCC three-digit groups were used instead of sub-groups.

#### Section 2. Seasonal Adjustment

The seasonally adjusted volume indexes are derived by deflating the raw value series by the raw current-weighted price index and seasonally adjusting the result using the U.S. Bureau of the Census X-11 seasonal adjustment program. This procedure is slightly different from that used in the System of National Accounts (SNA) in the derivation of 1971 constant dollar volumes. In the SNA the value series are seasonally adjusted independently at a disaggregated commodity level prior to deflation and aggregation. This, together with timing adjustments incorporated in the SNA for oil, natural gas and wheat, can lead to slight differences between the volume series published in *Summary of External Trade* and National Accounts statistics.

---

<sup>3</sup> In the case of imports, Sections I, II, III and V, this stage was omitted.

#### Section 1. Système de pondération

Les poids des composantes de l'indice de prix Paasche s'obtiennent de façon hiérarchique, les poids à un niveau d'agrégation donné étant répartis entre les composantes dont les prix sont donnés proportionnellement aux quantités expédiées pendant le mois, le trimestre ou l'année étudiée. On suppose donc que les postes dont les prix ne sont pas connus ont le même mouvement que les autres postes. En ordre décroissant avec des exceptions, mineures, les niveaux hiérarchiques sont d'habitude:

Total

Section – Sections I à V de la classification canadienne du commerce des marchandises (C.C.C.M.).

Groupe – Habituellement une combinaison de catégories de marchandises du Sommaire du Commerce extérieur.

Sous-groupe – Habituellement une catégorie particulière de marchandises du Sommaire du Commerce extérieur.

Classe – Niveau de détail à cinq chiffres de la C.C.C.M.

Pays.

Port de douane/numéro tarifaire – S'il y a lieu.

Les poids de l'indice de prix Laspeyres ont été déterminés de la même façon, sauf qu'on a utilisé les divisions à deux chiffres de la C.C.C.M.<sup>3</sup> plutôt que les groupes et les divisions à trois chiffres, plutôt que les sous-groupes.

#### Section 2. Méthode de correction pour les variations saisonnières

On obtient les indices de volume corrigés de variation saisonnières en effectuant la déflation de la série brute à l'aide de l'indice de prix brut à pondération courante et en corrigeant le résultat par le programme de désaisonnalisation X-11 du *U.S. Bureau of the Census*. La méthode diffère du Système de comptabilité nationale dans le calcul des volumes en dollars constants de 1971. Le Système de comptabilité nationale (S.C.N.) corrige la série des valeurs pour les variations saisonnières indépendamment à l'échelle des marchandises isolées avant d'effectuer la déflation et l'agrégation. Cette différence et les corrections sur la période pour le pétrole, le gaz naturel et le blé que contient le S.C.N. sont responsables des légères variations qu'on remarque entre les séries du volume publiées dans le *Sommaire du Commerce extérieur* et la statistique des comptes nationaux.

---

<sup>3</sup> Pour les sections I, II, III et V, des importations, on a sauté cette étape.

### Section 3. Description of Index Number Series Available

At present the following indexes are published:

### Section 3. Description des séries d'indices disponibles

Actuellement, on publie les indices suivants:

| Type  | Coverage — Couverture   | Published — Publiée       |
|---|---|---------------------------|
| Current-weighted price indexes — Indices des prix à pondération courante. | Total and Sections I to V — Total et sections I à V.  | Monthly — Mensuelle       |
| Base-weighted volume indexes — Indices du volume à pondération courante.  | Total and Sections I to V — Total et sections I à V.  | “ “                       |
| Base-weighted volume indexes — Indices du volume à pondération courante.  | Total and Sections I to V, seasonally adjusted — Total et sections I à V, corrigés de variations saisonnières.                                  | “ “                       |
| Current-weighted price indexes — Indices des prix à pondération courante. | Twenty selected commodity groups for imports and 23 for exports — Pour les importations, 20 groupes de marchandises, pour les exportations, 23. | Quarterly — Trimestrielle |

The base weighted (Laspeyres) price index will be available on a quarterly basis on request.

L'indice de prix à pondération de base (Laspeyres) est disponible sur demande sous forme trimestrielle.

In addition indexes for all countries and for the United States by SITC (Standard International Trade Classification) and for the Bank of Canada's own commodity groupings are produced for the Bank of Canada. The United States indexes are expected to be available by the end of June 1976. In the case of the SITC and Bank of Canada classification the weights are simply a reaggregation of the weights derived for the TCCC. More detailed commodity price indexes are not available. Requests may be made for component data as soon as the preliminary release of aggregate data is made in the Statistics Canada *Daily Bulletin*. The total indexes appear in the *Daily Bulletin* about 10 days before the release of the complete set of published data in the *Summary of External Trade* (Catalogue 65-001, 40 cents, \$4.00 a year). Since it is not presently feasible to calculate price indexes from preliminary data, indexes for the current month (quarter) are published in the Summary for the following month.

En outre les indices de tous les pays et des États-Unis sont calculés pour la Banque du Canada d'après la C.T.C.I. (Classification type pour le commerce international) et d'après les groupes de marchandises établis par la Banque. Les indices américains seront probablement disponibles vers la fin de juin 1976. Dans la classification type pour le commerce international et dans celle de la Banque du Canada, les poids ne sont qu'une simple agrégation des poids déjà obtenus pour la C.C.C.M. Il n'existe pas d'indices de prix des marchandises plus fins. On peut obtenir des données sur les composantes dès la publication provisoire des données agrégées dans le *Quotidien* de Statistique Canada. Les indices totaux sont publiés dans le *Quotidien* environ 10 jour avant la publication de l'ensemble des données dans le *Sommaire du Commerce extérieur* (n° 65-001 au catalogue, 40 cents, \$4.00 par année). Comme il est à l'heure actuelle impossible de calculer les indices de prix à l'aide de données provisoires, les indices pour le mois (trimestre) sont publiés dans le Sommaire pour le mois suivant.

Plans have been made to extend the 1971-based indexes from 1971 back year by year to 1968. This will be accomplished as resources permit. Resources are also being directed to a critical re-examination of the indexes with a view to extending their coverage and quality. A phased approach according to the order of priority is being undertaken to develop specification price indexes for exports where unit values are either non-existent or deemed to be unreliable.

On prévoit d'appliquer les indices de base 1971 aux années précédentes, jusqu'en 1968. Le travail dépendra des ressources disponibles. Il en sera de même pour le projet de critique des indices dans le but d'améliorer leur couverture et leur qualité. On veut aussi mettre au point des indices de prix de spécification à l'exportation dans le cas où les valeurs unitaires n'existent pas ou ne semblent pas fiables. On est en train d'établir l'ordre de priorité des étapes de ce projet.

### Section 4. Historical Data

### Section 4. Données historiques

Import and export price indexes are available in *Historical Statistics of Canada*, M.C. Urquhart, Editor, and K.A.H. Buckley, Assistant Editor, published in

Les indices de prix à l'importation et à l'exportation sont disponibles dans *Historical Statistics of Canada* de M.C. Urquhart (éditeur) et K.A.H. Buckley (assistant)

1965 in Toronto by The MacMillan Company of Canada Limited. This volume contains annual import and export price indexes for the total and for major product groups as follows:

1869 - 1915 (1900 = 100)  
1913 - 1934 (1913 = 100)  
1926 - 1960 (1948 = 100).

Monthly fixed-weighted price indexes are available from the External Trade Division on a 1948 = 100 time and weight base for the period 1946 to 1964. The indexes are based on the previous classification and covered eight major groups and 40 selected commodities.

Indexes based on the current classification with five main sections and 40 selected commodities with a few minor changes are available on the 1948 time and weight base for the period 1962 to 1970.

The indexes were rebased to a 1968 = 100 time and weight base in order to adjust to the profound changes in trading patterns which resulted from the implementation of the 1965 automotive pact with the United States. The 1968 = 100 price indexes are available for the period 1967 to March 1975. Indexes for the 40 selected commodities mentioned above, with some significant changes from the previous selection, are also available for this period.

publiés par *The MacMillan Company of Canada Limited* à Toronto en 1965. Cet ouvrage donne la liste des indices de prix à l'importation et à l'exportation pour l'ensemble et pour les grands groupes de produits de la façon suivante:

1869 - 1915 (1900 = 100)  
1913 - 1934 (1913 = 100)  
1926 - 1960 (1948 = 100).

Les indices mensuels à pondération fixe sont disponibles auprès de la Division du commerce extérieur dans la base de période et de pondération 1948 = 100 pour les années 1946 à 1964. Les indices sont fondés sur la classification précédente et couvrent huit grands groupes et 40 marchandises choisies.

Les indices basés sur la classification courante, couvrant cinq sections principales et quarante marchandises choisies, avec quelques modifications, sont disponibles dans la base de période et de pondération 1948 = 100 pour les années 1962 à 1970.

La base des indices a été transformée en une base de période et de pondération 1968 = 100 afin de tenir compte des variations marquées des tendances commerciales qui se sont produites à la suite de l'entrée en vigueur du traité de l'automobile de 1965 avec les États-Unis. Les indices de base 1968 = 100 sont disponibles pour la période allant de 1967 à mars 1975. Les indices des 40 marchandises choisies sus-mentionnées avec quelques modifications appréciables par rapport à la sélection précédente, sont aussi disponibles pour cette période.

## PART – IV – PARTIE

### Analysis of the Index Numbers

### Analyse des chiffres de l'indice

#### Section 1. Fixed-weight Import and Export Price Index Movements, 1971 = 100

Chart 25 shows price movement for total imports and total exports.

Total import and export price indexes increased very gradually during 1971 and 1972. The great surge in prices started in 1973, peaked in the second quarter of 1975 and levelled out in the third quarter.

The Terms of Trade (the export price index divided by the import price index on the 1971 = 100 base) have moved in Canada's favour since the third quarter of 1972 and peaked in the second quarter of 1974. Although narrowing since then, they still remain favourable. The main reason for the improvement in the Terms of Trade has been the greater importance in imports than in exports of manufactured goods. In 1975, End Products accounted for nearly 70% of import volume compared with 42% of export volume and they have had a much lower rate of increase in prices than the other three main sections.

Charts 26 and 27 demonstrate the tremendous divergence in price trends between the four main sections.

Crude Materials, which includes crude petroleum as a major component, has of course shown the largest increases for both imports and exports. The Crude Materials indexes peaked in the second quarter of 1975, having more than tripled compared with 1971 in the case of imports, and more than doubled in the case of exports.

For both imports and exports, Food, Feed, Beverages and Tobacco have shown the next largest increases over 1971 and are now declining, having peaked in the first half of 1975. The Fabricated Materials indexes have shown similar trends for both imports and exports and have levelled out between 175 and 185. End Products, whilst showing a much lower rate of change, are still increasing.

#### Section 1. Mouvements de l'indice de prix à l'importation et à l'exportation à pondérations fixe, 1971 = 100

Le graphique 25 donnent l'indice de prix globale à l'importation et à l'exportation.

Les indices totaux de prix à l'importation et à l'exportation ont augmenté graduellement en 1971 et 1972. Les prix ont commencé à monter brusquement en 1973, ont atteint un sommet au deuxième trimestre de 1975 et se sont stabilisés au cours du troisième trimestre.

Les termes de l'échange (le quotient de l'indice de prix à l'exportation de base 1971 = 100 par l'indice de prix à l'importation dans la même base) ont été favorables au Canada depuis le troisième trimestre de 1972 et ont atteint leur sommet pendant le deuxième trimestre de 1974 surtout parce que les importations de produits manufacturés étaient plus considérables que les exportations de ces marchandises. En 1975, les produits finis constituaient presque 70 % du volume des importations, mais 42 % de celui des exportations, et le taux d'accroissement des prix de ces produits était beaucoup plus faible que ceux des marchandises des trois autres sections.

Les graphiques 26 et 27 illustrent la divergence extraordinaire entre les tendances des prix des quatre sections.

Les indices qui ont le plus augmenté sont ceux des matières brutes, dont le pétrole brut est une composante majeure, tant à l'importation qu'à l'exportation. Ils ont plafonné au deuxième trimestre de 1975, après avoir plus que triplé depuis 1971 dans le cas des importations et plus que doublé dans celui des exportations.

Viennent ensuite les indices à l'importation et à l'exportation des aliments, provendes, boissons et tabacs. À la hausse jusqu'au deuxième semestre de 1975, ils sont à présent en baisse. Les tendances des indices des matières travaillées à l'importation et à l'exportation sont semblables et se sont stabilisées entre 175 et 185. Les produits finis, quoique leur taux de variation soit beaucoup plus bas, continuent d'augmenter.

Section 2. Constant Dollar Import  
and Export Volumes

Charts 28, 29 and 30 show seasonally adjusted volume in constant 1971 dollars. The constant 1971 dollar volumes were derived by deflating (dividing) current values by the current-weighted price indexes. They are consequently Laspeyres volume indexes using 1971 prices as weights (see Part I, Section 2 for derivation).

Since the beginning of 1971, total import volume has increased much more rapidly than export volume. Import volume (seasonally adjusted) peaked in September 1974 and has since declined. Despite the decline, current monthly import volume is still nearly 40% higher than 1971 levels.

Total export volume peaked at the beginning of 1973, a year and a half earlier than import volume and has since declined at a slightly slower rate than the more recent decline in total import volume. Current

Section 2. Volumes en dollars constants à  
l'importation et à l'exportation

Les graphiques 28, 29 et 30 donnent les volumes corrigés de variations saisonnières en dollars constants de 1971. Pour les calculer, on a procédé à la déflation (la division) des valeurs courantes par les indices de prix à pondération courante. Ce sont donc des indices de Laspeyres qui utilisent des prix de 1971 comme poids (voir la partie I, section 2 pour la formule).

Depuis le début de 1971, le volume total des importations a augmenté beaucoup plus rapidement que celui des exportations. Le volume corrigés de variations saisonnières des importations a plafonné en septembre 1974 et a diminué depuis. Malgré tout, le volume mensuel courant des importations est toujours de presque 40 % plus élevé qu'en 1971.

Le volume total des exportations a plafonné au début de 1973, un an et demi plus tôt que celui des importations, et a diminué depuis à un taux un peu plus faible que le taux récent de diminution du volume total

monthly volume is at about the same level as 1971 monthly volume.

The bulk of import volume is accounted for by the End Products Section, the share of End Products having increased from 64% in 1971 to 70% in 1975. Over the period January 1971 to September 1974 End Product Import volume has been the fastest growing Section of imports. Since September 1974 End Product import volume has declined slightly. The Fabricated Materials Section is the next largest Section of imports. The share of total import volume accounted for by Fabricated Materials declined from 20% in 1971 to 17% in 1975. Fabricated Materials have grown in volume since 1971 but at a slower pace than End Products, thus accounting for the decline in the Fabricated Materials share of total import volume. It is interesting to note that a declining trend started at exactly the same time, in October 1974, for both End Products and Fabricated Materials.

The Crude Materials and Food, Feed, Beverage and Tobacco Sections account for a minor share of import volume, 7% in each case in 1975. It is noticeable in the case of all four main sections and particularly in the case of Crude Materials that import volumes have become more erratic since the end of 1973.

As with imports, End Products also account for the largest share of total export volume, although the share is much less predominant than in the case of imports. The End Product share of total export volume has grown from 36% in 1971 to 44% in 1975. The growth in share has been due more to the decline in the export volume of the other three main sections rather than rapid growth in the absolute volume of End Product exports.

The broad trend of End Product exports has been to increase during 1971 and 1972 and then to level off, in sharp contrast to the other three main export sections which have all declined substantially during the last three years. Sixty per cent of End Product exports are accounted for by automotive products and within the broad trend shorter-term trends are discernible, which usually coincide with the end of the model year, when factors such as the change of models, prices and the shift of the manufacture of particular models from one side of the border to the other have a significant impact.

The next largest section in exports is Fabricated Materials which declined from 33% of total exports in 1971 to 29% in 1975. Fabricated Material export volume has followed parallel trends to those for End Product exports until the beginning of 1975 when they continued to decline heavily whereas End Products started to recover.

des importations. Le volume courant est au même niveau qu'en 1971.

La section "Produits finis" constitue la plus grande partie du volume des importations. De 1971 à 1975, la part des produits finis est passée de 64 % à 70 %. De janvier 1971 à septembre 1974, le volume des produits finis à l'importation a crû plus rapidement que les volumes de toutes les autres sections des importations. Depuis, on a enregistré une légère diminution. La section des matières travaillées est la deuxième en importance pour les importations. Sa part du volume total des importations est passée de 20 % en 1971 à 17 % en 1975. Le volume des matières travaillées a augmenté depuis 1971, plus lentement que celui des produits finis cependant, ce qui explique la baisse. Signalons que les tendances à la baisse des produits finis et des matières travaillées ont commencé exactement à la même période, en octobre 1974.

Les sections des matières premières et des aliments, provendes, boissons et tabacs ne constituent qu'une petite fraction (chacune 7 % en 1975) du volume total des importations. On remarque que les courbes des volumes des importations des quatre grandes sections et surtout de celles des matières brutes sont devenues irrégulières depuis la fin de 1973.

Comme c'est le cas pour les importations, les produits finis constituent une proportion importante des exportations, quoique moins importante. Ils sont passés de 36 % du volume total en 1971 à 44 % en 1975. Cette croissance est due moins à une augmentation du volume absolu dans cette section qu'à une baisse du volume des exportations des autres sections.

La tendance générale des produits finis a été à la hausse en 1971 et 1972 puis s'est stabilisée contrairement aux tendances des trois autres sections d'exportation, qui ont connu une baisse appréciable ces trois dernières années. Les produits de l'industrie automobile constituent 60 % des exportations de produits finis et dans le contexte de la tendance générale, on peut distinguer les tendances à moins longue échéance, coïncidant avec le lancement des nouveaux modèles vers la fin de l'année; les changements de modèles, les variations de prix et le déplacement du lieu de fabrication d'un modèle donné d'un côté de la frontière à l'autre ont alors un impact appréciable.

La deuxième section en importance est celle des matières travaillées. De 33 % du volume total des exportations en 1971, sa part est passée à 29 % en 1975. Les tendances des volumes des matières travaillées et des produits finis exportés sont demeurées parallèles jusqu'au début de 1975, alors que les premiers ont subi une baisse considérable et les seconds ont commencé à augmenter.

Crude Material export volume declined slightly in share from 18.8% in 1971 to 17.5% in 1975. The volume has behaved erratically particularly in the period from January 1971 to the peak in April 1973. Since April 1973 there has been a steady decline back to the 1971 level.

The Food, Feed, Beverages and Tobacco Section share dropped 2 percentage points to just under 10% of total exports between 1971 and 1975. Exports increased very slowly between January 1971 and April 1973 and then declined to below 1971 levels in 1974 and 1975.

In general export volumes have been more erratic than import volumes. As a result several months' data are required before a change in trend can be confirmed.

Le volume des exportations de matières brutes a baissé légèrement, passant de 18.8 % en 1971 à 17.5 % en 1975. La courbe du volume a été plutôt irrégulière, surtout de janvier 1971 à avril 1973, lorsqu'elle a atteint un sommet. Depuis, le volume a diminué de façon constante pour retomber à son niveau de 1971.

La section des aliments, provendes, boissons et tabacs a baissé de 2 points de pourcentage entre 1971 et 1975 pour représenter un peu moins de 10 % des exportations totales. Après avoir augmenté très lentement entre janvier 1971 et avril 1973, les exportations ont diminué pour tomber au dessous de leur niveau de 1971 en 1974 et 1975.

Les courbes des volumes des exportations ont été, en règle générale, plus irrégulières que celles des importations. Par conséquent, plusieurs mois sont nécessaires avant qu'il soit possible de mettre en évidence une modification de la tendance.

### Section 3. Comparison of the Fixed-weight 1971-based Price Indexes with the Current (Moving) Weight 1971 Referenced Price Indexes

The adoption of current weighting introduces an additional variable to be considered in evaluating period-to-period movements in the indexes. If wide divergences in the levels of component price relatives emerge, weight shifts among the components can have a considerable impact on higher level aggregate indexes. As the indexes are carried further in time from the base period the likelihood of such divergences becomes greater, and therefore the Paasche (current-weighted) index becomes more volatile than the equivalent Laspeyres (fixed-weighted) index (see Part I and Appendix A for discussions of price and weight effects).

#### Imports

Charts 31 to 35 compare 1971 base Laspeyres and Paasche price indexes for imports, Sections II to V and total.

For imports the Food, Feed, Beverages and Tobacco Section includes major commodity groups which are seasonal in both price and volume (e.g., fresh fruit) and others which have an irregular or sporadic pattern of shipments (e.g., raw sugar). The seasonal price influences are reflected in both indexes, but the Paasche index becomes extremely volatile following the large price increases for sugar in 1974. Since shipments of raw sugar fluctuate violently from month to month (in some months no deliveries are received), the Paasche index in recent months reflects these fluctuations, rising sharply in months with substantial deliveries of sugar, and dropping when deliveries of sugar are low.

Weight fluctuations had little effect on the Crude Materials Paasche index until early 1975, when the effect of weight variations for crude petroleum is reflected in the divergence between the two indexes.

The Fabricated Materials Paasche index declined in relation to the Laspeyres as a consequence of weight shifts away from commodity groups which have relatively high price relatives. The largest weight declines affected petroleum and coal products, iron and steel products and rolling mill products.

There is little dispersion among price relatives for the End Products Section commodity groups, with the result that weight variations do not produce large fluctuations in the Paasche price index.

The total imports Paasche index has declined in relation to the Laspeyres index because of an increase in weight for End Products at the expense of the other three main sections. Since the End Products index is

### Section 3. Comparaison entre les indices de prix de base 1971 à pondération fixe et les indices de prix de base 1971 à pondération courante (mobile)

L'adoption de la pondération courante exige de considérer une nouvelle variable pour évaluer les mouvements des indices d'une période à l'autre. Si des divergences considérables apparaissent dans les niveaux de prix relatifs qui en font partie, une modification des poids des composantes peut avoir des répercussions considérables sur les indices agrégés. Plus on s'éloigne de la période de référence, plus la probabilité de telles divergences augmente et plus l'indice Paasche (à pondération courante) devient variable si on le compare à celui de Laspeyres (pondération fixe) qui lui correspond (voir la partie I et appendice A pour un examen des effets de prix et de poids).

#### Importations

Dans les graphiques 31 à 35, on compare les indices de prix à l'importation de Laspeyres et de Paasche de base 1971, pour les sections II à V et pour l'ensemble.

La section des importations d'aliments, provendes, boissons et tabacs comprend des groupes de marchandises saisonniers de prix et de volume (ex., les fruits frais) et des groupes dont les expéditions sont irrégulières ou sporadiques (ex., le sucre brut). L'influence saisonnière se reflète dans les deux indices, mais l'indice Paasche perd de sa stabilité après la hausse brutale des prix du sucre en 1974. Comme les expéditions de sucre fluctuent considérablement d'un mois à l'autre (il arrive qu'aucune expédition ne soit faite), l'indice Paasche pour les mois récents reflète ces fluctuations, augmentant brusquement lorsque de grosses expéditions de sucre ont lieu et baissant lorsque celles-ci sont peu importantes.

Les fluctuations de poids n'ont eu que peu d'importance pour l'indice de Paasche des matières brutes jusqu'au début de 1975. À cette période, les deux indices divergent à cause de la variation du poids du pétrole brut.

L'indice Paasche des matières travaillées a baissé par rapport à celui de Laspeyres à cause de la diminution des poids attribués aux groupes de marchandises dont le prix relatif était assez élevé. Les baisses de poids les plus fortes touchaient les produits à base de pétrole, le charbon, le fer et l'acier et les produits laminés.

Comme la dispersion entre les prix relatifs des groupes de marchandises de la section des produits finis est faible, les variations de poids ne provoquent pas de fluctuations considérables de l'indice de prix Paasche.

L'indice total Paasche à l'importation a baissé par rapport à celui de Laspeyres surtout à cause de l'augmentation du poids de la section des produits finis aux dépens des trois autres grandes sections. Comme l'indice de pro-

the lowest among the sections, an increase in its weight results in a decrease in the total index and a decrease in weight results in an increase in the total index. One of the major influences on fluctuations in the End Products Section weight is the level of shipments of automotive products. The section weight tends to decline and the total index to peak, in mid-summer when motor vehicles shipments are considerably reduced prior to model changeovers.

duits finis est le plus faible de tous, une augmentation de son poids entraîne une baisse de l'indice total, et une baisse, une augmentation de cet indice. L'une des grandes causes de fluctuation dans la section des produits finis est le niveau des expéditions des produits de l'industrie automobile. Le poids de la section tend à baisser et l'indice total, à augmenter vers le milieu de l'été quand les expéditions de véhicules automobiles diminuent, juste avant le lancement de nouveaux modèles.

## Exports

Charts 36 to 40 compare Paasche and Laspeyres indexes for exports (each using the new selection of relatives and 1971 = 100 as reference).

The Paasche price indexes for Food, Feed, etc. and Crude Materials show considerable volatility compared to the Laspeyres price indexes for the same sections.

In both cases, extreme price relative values have emerged for important commodities which also display considerable fluctuation in volume (and therefore weight) from month to month.

Wheat is the most important commodity in Foods, Feeds, etc., accounting for more than 50% of section volume in some months. However, seasonal and irregular influences produce variations in the volume of wheat shipments, so that the wheat component has been observed to be as low as 20% of Food, Feed, etc., volume. Since the price relative for wheat is near the upper extreme of the range for Food, Feed, etc., component relatives, these large weight fluctuations are reflected in the saw-toothed movement of the aggregate index. Generally, small weights for wheat are associated with a low index for the section, while large weights for wheat are associated with high index values. Note, however, that during 1973 and early 1974, when the price of wheat was rising rapidly and continuously, the Food, Feed, etc., Section index shows an uninterrupted upward movement. Even though fluctuations in wheat export volumes are present during this period, the rapid price rise tends to dominate, overriding the effects of periodic shifts in weight for wheat.

The Crude Materials index is subject to similar conditions to those applying to Food, Feed, etc. In this case, crude petroleum has a high price relative, a large weight, and is subject to fluctuations in quantity of shipments. A similar movement to that for Food, Feed, etc., emerges, with the price movement of crude petroleum dominating for a period from mid-1973 to early 1974, and a fluctuating aggregate index emerging as the price relative for crude petroleum becomes stable at a high level.

Fabricated Materials shows very little deviation between the Paasche and Laspeyres price indexes, although there is considerable dispersion of price relatives among commodity groups. The weight of the Fabricated Materials Section is distributed among a large number of commodity groups, with no single group dominating the section. This distribution of weights is relatively stable, minimizing the impact of weight shifts on the Paasche index.

For the End Products Section, automotive products account for as much as 70% of the volume,

## Exportations

Dans les graphiques 36 à 40, on compare des indices Laspeyres et Paasche à l'exportation (basés sur la nouvelle sélection de prix relatifs et la période de référence 1971 = 100).

L'indice de prix Paasche pour les aliments, provendes, etc. et pour les matières brutes est beaucoup plus volatil comparé à l'indice Laspeyres pour les mêmes sections.

Dans les deux cas, on remarque des valeurs extrêmes pour les prix relatifs de marchandises importantes et des fluctuations de volume (et donc de poids) considérables pour ces mêmes marchandises d'un mois à l'autre.

Le blé constitue jusqu'à 50 % du volume de la section des aliments, provendes, etc., certains mois, et il est la marchandise la plus importante de cette section. Cependant, comme les expéditions de blé sont soumises à l'influence de facteurs saisonniers et irréguliers, la composante du blé peut baisser fortement, jusqu'à ne constituer que 20 % du volume de la section des aliments, provendes, etc. Or, le prix relatif du blé est très près de la limite supérieure pour la section aliments, provendes, etc., ses fluctuations de volume se reflètent donc dans la courbe en dents de scie de l'indice agrégé. Les faibles volumes d'expéditions de blé correspondent en général à un indice bas pour la section et les volumes forts à un indice élevé. En 1973 et au début de 1974 cependant, époque à laquelle le prix du blé a augmenté rapidement et sans interruption, l'indice de la section aliments, provendes, etc. connaît une hausse prolongée. Les fluctuations de volume des exportations de blé de cette période sont effacées par la hausse rapide des prix qui élimine les effets des modifications périodiques du poids du blé.

L'indice des matières brutes est soumis au même genre de conditions que celui des aliments, provendes, etc. Cette fois, c'est le pétrole qui a un prix relatif et un poids élevés et dont le nombre d'expéditions fluctuent. Un mouvement semblable à celui qu'on remarque pour les aliments, provendes, etc., apparaît: le mouvement des prix du pétrole brut domine pendant la période allant du milieu de 1973 au début de 1974, son prix relatif se stabilise à un niveau élevé, entraînant des fluctuations de l'indice agrégé.

Les indices Laspeyres et Paasche pour les matières travaillées correspondent assez bien malgré la dispersion considérable dans les prix relatifs des groupes de marchandises. Le poids des matières travaillées est réparti sur un grand nombre de groupes de marchandises et aucun groupe ne domine la section. Cette répartition est plutôt stable, ce qui minimise l'effet des modifications dans la pondération de l'indice Paasche.

Les produits de l'industrie automobile constituent jusqu'à 70 % du volume de la section Produits finis et les

with passenger vehicles alone accounting for 35% to 40%. The Paasche price index, therefore, tends to be sensitive to variations in the volume of the automotive component, which has shown the smallest increase in price relative since 1971. Consequently, the peaks in the End Products Paasche index are associated with low volume of automotive shipments, especially in mid-summer when shipments of passenger vehicles in particular are reduced for the annual model change-over. In addition, automobiles have recently accounted for a declining share of the section; this explains the generally higher level of the Paasche than the Laspeyres index for this section.

At the total level, the Paasche index shows a lower growth rate than the Laspeyres and has become more volatile as divergences in the levels of component indexes have developed. From the beginning of 1973 to mid-1975, End Products have gained in weight at the expense of Food, Feed, etc., Crude and Fabricated Materials. Since End Products has the lowest index, the total Paasche index currently is at a lower level than

voitures particulières, 35 % à 40 %. L'indice Paasche tend à refléter les variations de volume de cette composante; or ce prix relatif est celui qui a le moins augmenté depuis 1971. Les sommets de la courbe de l'indice Paasche sont donc liés à un faible volume des expéditions de ces produits, surtout vers le milieu de l'été alors que celles-ci diminuent en préparation du lancement de nouveaux modèles. De plus, les voitures ont récemment perdu de leur importance dans l'ensemble de la section; c'est pourquoi l'indice Paasche est en général plus élevé que celui de Laspeyres.

Dans l'ensemble, l'indice Paasche croît moins rapidement que celui de Laspeyres et perd de sa stabilité à mesure que les niveaux des indices des composantes divergent. Du début de 1973 au milieu de 1975, le poids des produits finis a augmenté aux dépens de ceux des aliments, provendes, etc., des matières brutes et des matières travaillées. Comme l'indice de produits finis est le plus faible des cinq, l'indice total Paasche est actuellement plus

the Laspeyres. The fluctuations in the Paasche index are associated with fluctuations in the weights for End Products (related to the level of automotive product shipments) and for Food, Feed, etc. (related to the level of wheat shipments). The weights for Crude and Fabricated Materials are generally less volatile and therefore contribute less to fluctuations in the total index.

#### Section 4. Comparison of 1968- and 1971-based Laspeyres Price Indexes

The purpose of this section is to explain differences between the old and the new index number series. The rebased Laspeyres indexes (1971 base) may be affected by two factors, when compared with the previous (1968 base) series:

- (i) changes in the price indicators selected,
- (ii) changes in the fixed weights as a result of changes in commodity patterns between 1968 and 1971.

#### Imports

Charts 41 to 45 compare 1968-based and 1971-based Laspeyres price indexes for the four main sections and for total imports.

The greater detail of the import than the export classification, and the dispersion of imports among a greater number of commodities, makes a precise identification of the effects of weight shifts more difficult than for exports. Also the use of automated processing enabled a considerable expansion in the commodity coverage of the 1971-based import indexes as compared to the 1968-based indexes. As a result, the divergence between the two sets of indexes may be largely traced to changes and expansion in the coverage and in the indicators used.

For Food, Feed, etc., Fabricated Materials, and the total indexes, the rebased index diverges considerably from the original, and in all cases is substantially lower. This would suggest that weights have generally shifted to commodity areas undergoing a slower rate of price increase. The unusual movement in the 1968-based Fabricated Materials index in early 1974 (also reflected in the total index), is a result of the large increase in the silver price at that time. This is not reflected in the 1971-based index since the weight for silver has been reduced substantially in the rebased index.

Crude Material imports are concentrated in the areas of mineral ores, coal, and crude petroleum. The changes in coverage were of less significance than for other sections, as is reflected in the index comparison, which generally shows little difference in movement and level between the original and the rebased indexes.

bas que celui de Laspeyres. Les fluctuations de l'indice Paasche correspondent aux fluctuations du poids des produits finis (qui dépend du niveau des expéditions des produits de l'industrie automobile) et de celui des aliments, provendes, etc. (qui dépend des expéditions de blé). Les poids des matières brutes et des matières travaillées sont moins variables et contribuent moins aux fluctuations de l'indice total.

#### Section 4. Comparaison entre les indices de prix Laspeyres base 1968 et 1971

Nous voulons ici signaler les différences entre l'ancienne série d'indices et la nouvelle. Comparée à l'ancienne série, la nouvelle a été modifiée de deux façons:

- (i) un changement dans les indicateurs de prix,
- (ii) un changement des poids de base dû à une variation des tendances dans le commerce des marchandises entre 1968 et 1971.

#### Importations

Dans les graphiques 41 à 45, on compare les indices de prix Laspeyres de base 1968 et 1971 pour les quatre grandes sections et pour l'ensemble des importations.

La classification plus fine des importations et leur dispersion en un grand nombre de marchandises rend beaucoup plus difficile la détermination précise des effets d'une modification de la pondération pour les importations que pour les exportations. Le traitement automatique des données a permis une couverture des marchandises beaucoup plus grande pour les indices à l'importation de base 1971 que pour ceux de 1968. Les divergences entre les deux ensembles d'indices peuvent être attribuées aux modifications et à l'élargissement de la couverture et des indicateurs.

Pour les aliments, provendes, etc., les matières travaillées et l'ensemble des importations, le nouvel indice diverge de façon marquée de l'ancien et est toujours beaucoup plus bas. Cela porte à croire que la répartition des poids a changé, les poids les plus lourds étant attribués au secteur de marchandises dont les prix montent moins vite. Le mouvement inhabituel de l'indice de base 1968 de la section des matières travaillées en 1974 (reflété dans l'indice total) résulte de la hausse marquée du prix de l'argent à cette époque. Cette hausse ne se remarque pas dans celui de 1971 parce que le poids attribué à l'argent a été beaucoup diminué lors de la refonte de l'indice.

Les importations de matières brutes se concentrent dans les secteurs des minerais, du charbon et du pétrole brut. Les variations dans la couverture avaient donc moins d'importance que dans les autres sections, comme le montre la comparaison des indices, lesquels diffèrent peu tant dans le mouvement que dans le niveau.

## Exports

Charts 46 to 50 compare the Laspeyres export price indexes at the section and total levels on the two bases. For Food, Feed, etc. and Fabricated Materials, although there have been additions to the indicators used and some commodity areas previously unrepresented have been added, the rebasing did not result in substantial changes at the section level. For Crude Materials the divergence of the two indexes beginning in late 1973 is attributable largely to the higher weight allocated to crude petroleum in the 1971-based index. Since 1973, the price relative for crude petroleum has increased rapidly to a level substantially above the aggregate index for Crude Materials. This together with the greater weight for crude petroleum in the 1971 based index accounts for the higher level of the 1971-based Crude Materials index compared to the 1968-based index.

The lower level of the End Products index is a result of revisions to the indicators selected to represent prices of motor vehicles (see discussion in Part II, Section 4 above).

## Exportations

Dans les graphiques 46 à 50, on compare les indices de prix Laspeyres de base 1968 et 1971 pour chaque section et pour l'ensemble des exportations. La refonte n'a pas nettement modifié les résultats pour les sections des aliments, provendes, etc. et des produits travaillées, bien qu'on ait ajouté des indicateurs et des secteurs de marchandises. La divergence entre les deux indices de matières brutes à partir de la fin de 1973 dépend surtout de la hausse du poids du pétrole brut dans l'indice de base 1971. Depuis 1973, le prix relatif du pétrole brut a monté très rapidement jusqu'à dépasser de beaucoup l'indice de matières brutes. Si on ajoute à cela l'augmentation du poids du pétrole brut dans l'indice de 1971, cela explique le niveau plus élevé de cet indice pour les matières brutes.

L'indice de produits finis est plus bas pour la base 1971 que pour 1968 à cause de la révision des indicateurs représentant les prix des véhicules moteurs (voir la partie II, section 4 ci-dessus).

GRAPHIQUE 49

Finally, for total exports, the slightly higher level of the 1971-based index is a consequence of the higher weight for crude petroleum in the Crude Materials Section, partially offset by the lower level of the End Products index.

Enfin, dans l'ensemble, l'indice de 1971 est légèrement plus élevé que celui de 1968 à cause de l'augmentation du poids du pétrole brut dans la section des matières brutes qui n'est compensé que partiellement par le niveau plus bas des produits finis.

## APPENDICES

## APPENDIX – A – APPENDICE

### Decomposition of the Change in a Paasche Price Index Into Price and Weight Effects Décomposition des variations d'un indice de prix Paasche en effets de prix et de poids

The Paasche index may be expressed as:

On peut décrire l'indice Paasche de la façon suivante:

$$I^t = \frac{\sum P^t Q^t}{\sum P^0 Q^t}$$

$$= \sum R^t W^t$$

where

où

$$R^t = P^t/P^0$$

$$W^t = \frac{P^0 Q^t}{\sum P^0 Q^t}$$

and the summation is over the set of commodity groups.

et la sommation s'effectue sur l'ensemble des groupes de marchandises.

$R^t$  is the “relative” and, as the ratio of current price to base price, is a simple price index for the commodity.  $W^t$  is the “weight” and is a measure of the importance attached to the relative  $R^t$  when calculating the index  $I^t$ . By definition,  $\sum W^t = 1$ . Both the price relatives and the weights may vary from period to period, the relatives because of variations in price, the weight because of variations in quantity. It is useful to be able to attribute changes in the index to changes in relatives (prices) or changes in weights (quantities).

$R^t$  est le “prix relatif” et, comme le ratio du prix courant au prix de base, est un indice simple de prix de la marchandise.  $W^t$  est le “poids” et mesure l'importance attribuée au prix relatif  $R^t$  dans le calcul de l'indice  $I^t$ . Par définition,  $\sum W^t = 1$ . Les prix relatifs et les poids peuvent varier d'une période à l'autre, les prix relatifs à cause de variations de prix, les poids, à cause de variations de quantité. Il est utile de pouvoir attribuer les variations dans l'indice à des variations de prix relatif (prix) ou de poids (quantités).

The current period index  $I^t$  can be expressed in terms of the previous index  $I^{t-1} = \sum R^{t-1} W^{t-1}$  and the changes in relatives ( $\Delta R = R^t - R^{t-1}$ ) and changes in weights ( $\Delta W = W^t - W^{t-1}$ ).

L'indice courant  $I^t$  peut être écrit en fonction de l'indice précédent  $I^{t-1} = R^{t-1} W^{t-1}$  et des variations des prix relatifs ( $\Delta R = R^t - R^{t-1}$ ) et de celles des poids ( $\Delta W = W^t - W^{t-1}$ ).

$$I^t = \sum R^t W^t$$

$$= \sum (R^{t-1} + \Delta R) (W^{t-1} + \Delta W)$$

$$= \sum [(R^{t-1} + \Delta R) W^{t-1} + (R^{t-1} + \Delta R) \Delta W]$$

$$= \sum R^{t-1} W^{t-1} + \sum \Delta R W^{t-1} - \sum \Delta W R^t$$

since

puisque

$$R^{t-1} + \Delta R = R^{t-1} + R^t - R^{t-1} = R^t$$

Hence the point difference in the current weighted price index between periods  $t$  and  $t-1$  can be expressed as:

Donc la différence dans l'indice de prix à pondération courante entre les périodes  $t$  et  $t-1$  peut s'écrire comme:

$$I^t - I^{t-1} = \sum R^{t-1} W^{t-1} + \sum \Delta R W^{t-1} + \sum \Delta W R^t - \sum R^{t-1} W^{t-1}$$

$$= \sum \Delta R W^{t-1} + \sum \Delta W R^t$$

since

puisque

$$I^{t-1} = \sum R^{t-1} W^{t-1}$$

The first term  $\Sigma \Delta RW^t - 1$  is the price effect and can be interpreted as the contribution of the change in prices holding weights constant.

The second term  $\Sigma \Delta WR^t$  is the weight effect and can be interpreted as the result of the change in weights given that the relatives have changed.

It is useful for interpretation of the effects of weight changes to subtract the current index from the current relatives in the second term, as follows:

$$\Sigma \Delta W (R^t - \Sigma R^t W^t)$$

instead of

$$\text{plutôt que} \\ \Sigma \Delta WR^t$$

These two expressions yield the same total result:

$$\begin{aligned} \Sigma \Delta W (R^t - \Sigma R^t W^t) &= \Sigma \Delta WR^t - \Sigma \Delta W (\Sigma R^t W^t) \\ &= \Sigma \Delta WR^t - \Sigma R^t W^t \Sigma \Delta W, \end{aligned}$$

since  $\Sigma R^t W^t$  is a constant

puisque  $\Sigma R^t W^t$  est une constante

$$= \Sigma \Delta WR^t$$

since

$$\text{puisque} \\ \Sigma W^t = \Sigma W^{t-1} = 1,$$

hence

$$\text{par conséquent} \\ \Sigma \Delta W = 0$$

The subtraction of the current index from a particular component relative allows the effect of a change in that component's weight to be assessed in terms of the level of the relative in relation to the total index.

An example which shows how weight effects can have a substantial impact on a current-weighted price index is given below. The example is based on crude material current-weighted export price indexes for the second quarters of 1974 and 1975.

Holding weights fixed and allowing prices alone to vary the index would have increased 42.7 points or 19.9%. In practice the weight effect cancelled out over 50% (23.3 points) of the price change to yield a net increase of only 19.4 points or 9.0%. The main commodity component which accounted for the negative weight effects was crude petroleum where a substantial decline in the weight (- 9.4 percentage points) for a relative well above the current index completely cancelled out the 15.1 point positive price effect. Nickel ores provides another example of a substantial price

Le premier terme  $\Sigma \Delta RW^t - 1$  est l'effet de prix et peut être interprété comme la contribution de la variation des prix lorsque les poids sont constants.

Le deuxième terme  $\Sigma \Delta WR^t$  est l'effet de poids et peut être interprété comme le résultat de la variation des poids lorsque les prix relatifs ont changé.

On peut juger utile de soustraire l'indice courant des prix relatifs courants dans le deuxième terme pour interpréter l'effet de la variation du poids. On procède comme suit:

Ces deux expressions donnent le même résultat:

En soustrayant l'indice courant d'un de ses prix relatifs constitutifs, on peut mesurer l'effet d'une variation du poids de cette composante au point de vue de son niveau par rapport à l'indice total.

Nous donnons ci-dessous un exemple qui illustre comment l'effet du poids peut avoir une influence considérable sur un indice de prix à pondération courante. Nous avons basé cet exemple sur les indices de prix à pondération courante des matières brutes pour le deuxième trimestre de 1974 et de 1975.

Si les poids avaient été fixes et seuls les prix avaient varié, l'indice aurait augmenté de 42.7 points ou 19.9 %. En pratique l'effet de poids a éliminé plus de 50 % (23.3 points) de la variation des prix. Le résultat a été une augmentation nette de 19.4 points seulement ou 9.0 %. La marchandise principalement responsable de l'effet de poids négatif était le pétrole brut, dont la baisse appréciable de poids (- 9.4 %), alors que son prix relatif est bien au-dessus de l'indice courant, a annulé les 15.1 points de l'effet positif des prix. Les minerais de nickel sont un autre exemple d'un effet de prix appréciable annulé par

effect being cancelled out by the weight effect. In contrast to crude petroleum the negative effect was produced by a substantial increase in weight as opposed to a decrease, coupled with a current relative which was significantly lower than, as opposed to higher than, the current index.

un effet de poids. Contrairement au pétrole brut, l'effet négatif a été produit par une augmentation marquée du poids plutôt que par une baisse, et un rapport de prix courant beaucoup plus bas que l'indice courant plutôt que beaucoup plus haut.

|  | per cent – pourcentage   |   |  |
| <b>Section I</b>   |  |   |  |
| Live animals – Animaux vivants . . . . .   | 0.3  | 0.2   | 0.3  |
| <b>Section II</b>  |  |   |  |
| Food, feed, beverages and tobacco – Aliments, provendes, boissons et tabacs . . . . .                    | 7.2  | 7.8   | 7.1  |
| Meat and meat preparations – Viandes et préparations de viandes . . . . .                                | 0.7  | 0.6   | 0.7  |
| Fish and marine animals – Poisson et animaux marins . . . . .  | 0.4  | 0.4   | 0.4  |
| Dairy produce, eggs and honey – Produits laitiers, oeufs et miel . . . . .                               | 0.2  | 0.2   | 0.2  |
| Grain, flour and meal – Grains, farine et provendes . . . . .  | 0.2  | 0.6   | 0.5  |
| Fresh fruits – Fruits frais . . . . .  | 1.2  | 0.8   | 0.9  |
| Dried fruits and fruit preparations – Fruits séchés et préparations à base de fruits . . . . .           | 0.6  | 0.5   | 0.6  |
| Vegetables and vegetable preparations – Légumes et préparations à base de légumes . . . . .              | 1.0  | 1.0   | 1.1  |
| Sugar and sugar preparations – Sucre et préparations à base de sucre . . . . .                           | 0.9  | 1.7   | 0.7  |
| Cocoa, coffee, tea and other food materials – Cacao, café, thé et autres matières alimentaires . . . . . | 1.2  | 1.1   | 1.1  |
| Fodder and feeds, except unmilled cereals – Fourrage et provendes, sauf céréales non moulues . . . . .   | 0.2  | 0.3   | 0.3  |
| Beverages – Boissons . . . . .   | 0.5  | 0.5   | 0.6  |
| Tobacco – Tabac . . . . .  | 0.1  | 0.1   | 0.1  |
| <b>Section III</b>   |  |   |  |
| Crude materials, inedible – Matières brutes, non comestibles . . . . .                                   | 8.6  | 15.2  | 6.8  |
| Crude animal products – Produits bruts d'origine animale . . . . .                                       | 0.3  | 0.3   | 0.2  |
| Crude vegetable products – Produits végétaux bruts . . . . .   | 0.6  | 0.7   | 0.5  |
| Crude wood products – Produits en bois brut . . . . .  | 0.2  | 0.2   | 0.2  |
| Wool, cotton and man-made fibres – Laine, coton et fibres artificielles . . . . .                        | 0.6  | 0.4   | 0.4  |
| Metals in ores and concentrates – Minerais et concentrés métallifères . . . . .                          | 1.6  | 1.4   | 1.4  |
| Coal and other related products – Houille et produits connexes . . . . .                                 | 1.1  | 1.7   | 0.7  |
| Crude petroleum – Pétrole brut . . . . .   | 3.6  | 9.9   | 2.9  |
| Crude non-metallic minerals – Minéraux non métalliques bruts . . . . .                                   | 0.6  | 0.6   | 0.5  |
| <b>Section IV</b>  |  |   |  |
| Fabricated materials, inedible – Matières travaillées, non comestibles . . . . .                         | 20.3   | 17.7  | 17.1   |
| Rubber fabricated materials – Demi-produits du caoutchouc . . . . .                                      | 0.4  | 0.2   | 0.2  |
| Wood fabricated materials – Demi-produits du bois . . . . .  | 0.8  | 1.1   | 1.2  |
| Textile fabricated materials – Demi-produits du textile . . . . .  | 3.3  | 2.2   | 2.7  |
| Oils, fats and waxes – Huiles, corps gras et cires . . . . .   | 0.4  | 0.4   | 0.3  |
| Chemicals and related products – Produits chimiques et produits connexes . . . . .                       | 4.7  | 4.4   | 4.1  |
| Petroleum and coal products – Dérivés du pétrole et du charbon . . . . .                                 | 1.4  | 0.8   | 0.4  |
| Rolling mill products – Produits des usines de laminage . . . . .  | 1.9  | 1.4   | 1.0  |
| Iron and steel products – Produits de fer et d'acier . . . . .   | 1.4  | 1.4   | 1.0  |
| Non-ferrous metals – Métaux non ferreux . . . . .  | 1.6  | 1.3   | 1.2  |
| Metal fabricated basic products – Demi-produits de base en métal . . . . .                               | 2.3  | 1.9   | 2.0  |
| Non-metallic minerals – Produits minéraux non métallique de base . . . . .                               | 1.2  | 1.0   | 1.2  |
| Other fabricated products – Autres demi-produits . . . . .   | 0.9  | 1.6   | 1.6  |
| <b>Section V</b>   |  |   |  |
| End products, inedible – Produits finis, non comestibles . . . . .                                       | 63.6   | 59.1  | 68.7   |
| Industrial machinery – Machines industrielles . . . . .  | 9.8  | 9.6   | 10.3   |
| Agricultural machinery, including tractors – Machinerie agricole, y compris tracteurs . . . . .          | 3.0  | 3.7   | 3.9  |
| Passenger automobiles and chassis – Voitures particulières et châssis . . . . .                          | 10.1   | 7.6   | 10.3   |
| Trucks and other motor vehicles – Camions et autres véhicules moteurs . . . . .                          | 3.3  | 3.4   | 4.0  |
| Motor vehicle parts – Pièces de véhicules moteurs . . . . .  | 18.2   | 13.3  | 14.5   |
| Communication and related equipment – Equipement et matériel de communication . . . . .                  | 2.7  | 2.5   | 3.4  |
| Electrical equipment – Matériel électriques . . . . .  | 4.2  | 4.8   | 5.7  |
| Office machines and equipment – Machines et matériel de bureau . . . . .                                 | 2.9  | 2.0   | 2.8  |
| Apparel and apparel accessories – Vêtements et accessoires vestimentaires . . . . .                      | 1.2  | 1.6   | 1.7  |
| Miscellaneous – Divers . . . . .   | 8.2  | 10.6  | 12.2   |
| <b>Total</b> . . . . .   | <b>100.0</b>   | <b>100.0</b>  | <b>100.0</b>   |

<sup>1</sup> Based on 1971 values using 1971 prices and quantities. – Basé sur des valeurs de 1971 utilisant les prix et quantités de 1971.

<sup>2</sup> Based on 1975 values using 1975 prices and quantities. – Basé sur des valeurs de 1975 utilisant les prix et quantités de 1975.

<sup>3</sup> Based on 1975 quantities valued at 1971 prices. – Basé sur des quantités de 1975 évaluées aux prix de 1971.

| Remainder of Section II – Le reste de la section II . . . . .  | 1.8  | 1.4   | 1.5  |
| <b>Section III</b>   |  |   |  |
| Crude materials, inedible – Matières brutes, non comestibles . . . . .   | 18.8   | 24.7  | 17.5   |
| Rapeseed – Graine de colza . . . . .   | 0.9  | 0.7   | 0.5  |
| Other crude vegetable products – Autres produits végétaux bruts . . . . .  | 0.6  | 0.5   | 0.4  |
| Iron ore, concentrates and scrap – Minerais, concentrés et déchets de fer . . . . .  | 2.5  | 2.2   | 2.3  |
| Copper in ores, concentrates and scrap – Minerais, concentrés et déchets de cuivre . . . . .                                   | 1.3  | 1.0   | 1.7  |
| Nickel in ores, concentrates and scrap – Minerais, concentrés et déchets de nickel . . . . .                                   | 2.3  | 1.6   | 1.9  |
| Zinc in ores, concentrates and scrap – Minerais, concentrés et déchets de zinc . . . . .                                       | 0.8  | 0.9   | 0.6  |
| Other ores, concentrates and scrap – Autres minerais, concentrés et déchets métallifères . . . . .                             | 1.2  | 1.2   | 1.5  |
| Crude petroleum – Pétrole brut . . . . .   | 4.5  | 9.5   | 4.1  |
| Natural gas – Gas naturel . . . . .  | 1.4  | 3.4   | 1.4  |
| Coal and other bituminous substances – Charbon et substances bitumineuses brutes . . . . .                                     | 0.5  | 1.5   | 0.8  |
| Asbestos, unmanufactured – Amiante non ouvré . . . . .   | 1.3  | 0.9   | 0.9  |
| Remainder of Section III – Le reste de la section III . . . . .  | 1.3  | 1.3   | 1.4  |
| <b>Section IV</b>  |  |   |  |
| Fabricated materials, inedible – Matières travaillées, non comestibles . . . . .   | 33.4   | 30.5  | 28.8   |
| Lumber – Bois d'oeuvre . . . . .   | 4.9  | 3.0   | 3.5  |
| Other wood fabricated materials – Autres demi-produits en bois . . . . .   | 0.7  | 0.6   | 0.6  |
| Wood pulp and similar pulp – Pâte de bois et pâte similaire . . . . .  | 4.6  | 5.7   | 4.1  |
| Newsprint paper – Papier journal . . . . .   | 6.6  | 5.4   | 5.4  |
| Other paper and paper board – Autre papier et carton . . . . .   | 0.6  | 0.9   | 0.8  |
| Textile fabricated materials – Demi-produits en matières textiles . . . . .  | 0.5  | 0.3   | 0.4  |
| Chemicals – Produits chimiques . . . . .   | 1.0  | 1.3   | 1.3  |
| Fertilizer and fertilizer materials – Engrais et matières fertilisantes . . . . .  | 1.5  | 1.4   | 1.3  |
| Synthetic rubber and plastic materials – Caoutchouc synthétique et matières plastiques . . . . .                               | 0.6  | 0.4   | 0.4  |
| Petroleum and coal products – Dérivés du pétrole et du charbon . . . . .   | 0.7  | 2.0   | 0.9  |
| Primary iron and steel – Fer et acier primaires . . . . .  | 0.4  | 0.3   | 0.2  |
| Rolling mill products – Produits des usines de laminage . . . . .  | 1.1  | 0.7   | 0.7  |
| Other iron, steel and alloys – Autres fer, acier et alliages . . . . .   | 0.8  | 1.3   | 1.2  |
| Aluminum including alloys – Aluminium, y compris alliages . . . . .  | 2.6  | 1.3   | 1.4  |
| Copper and alloys – Cuivre et alliages . . . . .   | 2.2  | 1.5   | 2.2  |
| Nickel and alloys – Nickel et alliages . . . . .   | 1.8  | 1.3   | 1.5  |
| Zinc including alloys – Zinc, y compris alliages . . . . .   | 0.5  | 0.6   | 0.4  |
| Other non-ferrous metals and alloys – Autres métaux non-ferreux et alliages . . . . .  | 0.4  | 0.6   | 0.5  |
| Remainder of Section IV – Le reste de la section IV . . . . .  | 1.9  | 1.9   | 2.0  |
| <b>Section V</b>   |  |   |  |
| End products, inedible – Produits finis, non comestibles . . . . .   | 35.7   | 32.1  | 43.7   |
| Industrial machinery – Machinerie industrielle . . . . .   | 2.6  | 2.8   | 3.3  |
| Agricultural machinery, including tractors – Machinerie agricole, y compris tracteurs . . . . .                                | 1.1  | 1.7   | 1.9  |
| Passenger automobiles and chassis – Voitures particulières et châssis . . . . .  | 13.1   | 9.3   | 14.1   |
| Truck, truck tractors and chassis – Camions, tracteurs routiers et châssis . . . . .   | 3.3  | 3.7   | 5.1  |
| Motor vehicle parts and accessories – Pièces et accessoires de véhicules moteurs . . . . .                                     | 9.0  | 6.6   | 8.9  |
| Television, telecommunication and related equipment – Téléviseurs, autre équipement et matériel de télécommunication . . . . . | 1.3  | 1.1   | 1.7  |
| Remainder of Section V – Le reste de la section V . . . . .  | 5.2  | 7.0   | 8.8  |
| <b>Total</b> . . . . .   | <b>100.0</b>   | <b>100.0</b>  | <b>100.0</b>   |

<sup>1</sup> Based on 1971 values using 1971 prices and quantities. – Basé sur des valeurs de 1971 utilisant les prix et quantités de 1971.

<sup>2</sup> Based on 1975 values using 1975 prices and quantities. – Basé sur des valeurs de 1975 utilisant les prix et quantités de 1975.

<sup>3</sup> Based on 1975 quantities valued at 1971 prices. – Basé sur des quantités de 1975 évaluées aux prix de 1971.
